</table>
Thermo Scientific Orion pH Electrode Cleaning Solutions

Thermo Scientific Orion pH electrode cleaning solutions are designed to simplify pH electrode maintenance. Bottles of the ready-to-use cleaning solutions are provided along with a small beaker to hold the cleaning solution and a plastic pipette for removing the electrode internal filling solutions.

The cleaning solutions are identified by the letters A, B, C, and D. Each letter designates a unique formulation that gently removes dirt and deposits from the electrode without causing damage to the electrode. Cleaning a dirty or clogged electrode restores proper electrode performance and prolongs the useful life of the electrode. The cleaning solution kit, Cat. No. 900020, contains one bottle of each cleaning solution for operators who are working with a variety of sample matrices.

Optimal cleaning procedures are dependent upon the sample type, extent of buildup or clogging and the type of electrode. The following general instructions offer a starting point for developing an effective cleaning protocol.

NOTE: Please read MSDS sheets and heed labels for safety information prior to use. Follow all handling instructions.

1. Choose the appropriate cleaning solution. Cleaning solution D is a mild cleaner. If a stronger cleaning solution is required, use cleaning solution C. Cleaning solution A is for removing protein deposits and cleaning solution B is for removing bacteriological contaminants.
2. Shake the cleaning solution. Pour enough of the cleaning solution into the beaker to cover the electrode junction and immerse the section of the electrode that requires cleaning.
3. Soak the electrode for a few minutes in the cleaning solution while moderately stirring the solution. Non-glass electrodes and electrodes with wick and fiber junctions may require more cleaning time.
4. Remove the electrode from the cleaning solution and rinse the electrode thoroughly with distilled water to remove all traces of the cleaning solution.
5. If cleaning a refillable electrode, remove the filling solution from the electrode using the pipette that is included in the kit. Add fresh filling solution to the electrode. Repeat removing and adding filling solution two or three times for optimal electrode performance.
6. If cleaning a Sure-Flow electrode, flush a few drops of filling solution through the electrode junction by pressing down on the electrode cup. Ensure that the junction flashes and resets properly.
7. Rinse the electrode thoroughly with distilled water and measure samples as usual. If the electrode response is slow or the electrode does not calibrate correctly, repeat the cleaning procedure. Various samples and samples that contain solid materials often require additional cleaning and additional filling solution changes.

END OF DOCUMENT
I. Policy: The Gas Chromatograph/Mass Spectrometer (GC/MS) instruments will be checked to ensure their reliability. Maintenance will be carried out if needed according to the procedures below.

A. Sequence Maintenance: The following checks are performed prior to analyzing casework.

1. Change Insert (Liner)
   a. A clean, silanized insert liner is replaced prior to a sequence.
   b. A small amount of silanized glass wool is added to the insert.
   c. Replace the O-ring on the insert.
   d. See GC/MS-Cleaning the Liners (TOX.29) for procedure for cleaning dirty liners.

2. A Standard Spectra Auto Tune is performed.

3. Standard Spectra Auto Tune Interpretation:
   a. EM Volts should be reasonable depending on EM age (typically 1200-2400 Volts). New multipliers may have values below 1000. Higher EM Volts may indicate a need for a source cleaning. The EM Volts should not exceed 3000.
   b. The EM Volts should not vary significantly from previous autotunes.
   c. Peak widths (Pw50): 0.45-0.65 amu.
   d. Ions with an amu of less than 69 should have an abundance less than 10% of the base ion (69 amu). If ions 18, 28, and 32 are higher than 10% this may be an indication of a leak in the system.
   e. Vacuum and mass spectrum temperatures should not vary significantly from previous autotunes.
   f. If the above criteria are not met, maintenance and preventive action shall be taken.
   g. The analyst evaluating the autotune will initial the log.
   h. Printouts or an electronic equivalent of the tunes will be kept by the toxicology unit.

   i. For instruments running Chemstation Acquisition software, the tune will be printed and kept in the Gas Chromatography/Mass Spectrometry Maintenance Binder (see Care and Maintenance of Equipment (TOX.17) for further information about the maintenance log).

   ii. For instruments running Masshunter Acquisition software, an electronic copy of the tune is automatically saved in a folder on the computer and named based on the date/time and type of tune (example file location: D:\Masshunter\GCMS\1\5977\PDF)

4. Documentation
   a. Changing the insert liner, performing the autotune, and any additional maintenance performed prior to analyzing casework will be noted in the Gas Chromatography/Mass Spectrometry Maintenance Log.

B. Quarterly-Moisture Traps
1. The moisture traps for each of the gas lines shall be checked quarterly. **The check will be logged in the Sheriff Specialist Safety Checks. See SAFF.04.04.**

2. A change in the color of the indicator beads is a sign of moisture or oxygen present and the trap/filter kit needs to be replaced.
   a. Moisture Trap, the original color is yellow originally and turns clear when saturated
   b. Oxygen Filter, the original color is green originally and turns grey when saturated
   c. The medical air line will have the oxygen filter saturated and can still be used

3. Procedure for changing moisture traps:
   a. Turn off the main gas line.
   b. Refer to manufacturer's instruction for replacing the trap/filter kit.
   c. **REMEMBER:** Changing the filters on the carrier gas line means that the oven, injector, and detector temperatures have to be at room temperature, unless the procedure is performed rapidly. If proper shut down is not performed, the column will be damaged.
   d. Changing the trap/filter will be logged in the Sheriff Specialist Safety Checks. See SAFF.04.04.

C. Non-Routine Maintenance

1. Refer to GC/MS-Cleaning the Ion Source (TOX.25)
2. Refer to GC/MS-Changing the Column (TOX.26)
3. Refer to GC/MS-Cleaning the Inlet (TOX.27)
4. For non-routine maintenance and ordering parts, see the GC/MS-References (TOX.34). These references may be used for troubleshooting and maintenance procedures.
5. Merlin Seal Replacement:
   a. The Merlin Seal can last thousands of injections, however its exact lifetime cannot be predicted
   b. Presence of an air leak or inability to maintain inlet pressure may indicate the merlin seal needs to be replaced
   c. The merlin seal sits at the top of the injection port and uses a microseal nut
   d. Care should be taken to handle the new seal with tweezers when replacing
6. Septum Replacement:
   a. The Merlin Seal is used in place of a septum, but a septum can be used if needed
   b. The recommended septum is the Agilent Inlet Septa. These septa are preconditioned and it is recommended that they be handled with tweezers for best results.
   c. The septum uses a hex nut instead of the microseal nut
   d. If a traditional septum is used, it should be replaced with every sequence and should be documented in the log
7. The calibration vial is refilled with PFTBA as needed. **Refilling of the vial and subsequent purging of the valve will be documented in the maintenance log.**
8. Changing the split vent trap (may also be referred to as chemical trap)
   a. Split vent trap maintenance should be done after approximately 1 year
   b. Change the method to maint.m to cool the inlet and oven.
   c. Stop the inlet gas flow.
   d. Remove the top, rear cover on the GC. It is on by pressure-fit only, no screws need to be removed.
   e. Remove the weldment and gas lines from the holding bracket. Try not to stress or kink the gas lines.
   f. Unscrew the big knurled knob of the vent line trap weldment.
   g. Note the orientation of the old trap.
   h. Remove the white trap and 2 o-rings. The o-rings may stick and can be removed with tweezers.
i. Place 2 new o-rings into the indentations onto the ends of the new trap.

j. Place the new trap into the trap weldment, narrow end toward the front of the GC. Screw the knurled knob until the vent line trap weldment is back together, but do not tighten yet.

k. Place the weldment and gas lines back into the bracket.

l. Tighten the knurled knob until sealed.

m. Replace the GC cover.

n. Reload a valid method and allow gases to purge the inlet for about 15 minutes.

o. There is a video on the Agilent web site:
   Columns/Pages/splitventtrap.aspx

9. Cleaning the split vent line

   a. Split vent line maintenance is an option when troubleshooting GCMS issues
   b. Change the method to maint.m to cool the inlet and oven.
   c. Stop the inlet gas flow. The column may need to be capped to prevent air from entering the system. This may not be necessary if other maintenance is being done such as changing the column.
   d. Remove the top, rear cover on the GC. It is on by pressure-fit only; no screws need to be removed.
   e. Move the tower.
   f. Unscrew the auto-sampler carousel.
   g. Unscrew the top, left inlet access panel.
   h. Unscrew the top, left, back cooling-fan access panel if needed.
   i. Unscrew the nut connecting the split vent line to the inlet.
   j. Unscrew the nut connecting the split vent line to the trap weldment.
   k. Carefully extract the vent line from the GC housing. Try not to stress or kink the vent line or other gas lines.
   l. Place the line vertically in a large beaker. Use the beaker to catch solvent wash waste. Dispose of organic chemical waste properly.
   m. Wash the vent line with a variety of solvents until the washes run clear. Solvent suggestions include: methanol, acetone, chloroform, and methylene chloride. Use gravity to add each solvent at the trap weldment end, washing debris out the inlet end.
   n. Cotton swabs can be used to clean debris out of the vent line ends and the inlet port.
   o. Allow the vent line to dry.
   p. Thread the vent line back into the GC housing.
   q. Reconnect the nuts at the inlet and trap weldment ends.
   r. Replace the 3 GC covers, the carousel, and the tower.
   s. Start the gas inlet flow.
   t. Slowly increase the inlet temperature over time, allowing any remaining solvents to evaporate and purge.
   u. Allow gas to flow through the inlet at high temperature for about 15 minutes.

10. FID Jet Maintenance

   a. Agilent recommends replacing the FID jet during maintenance. But the following is a cleaning procedure from Agilent.
      i. Remove the FID jet by using a 1/4 inch nut driver to loosen the jet. Remove the jet with tweezers, being careful as to not touch or bend the interconnect spring.
1. ii. Run a 0.010-inch cleaning wire through the tip of the jet. Scratches on the FID jet will affect the performance, so use caution to ensure the jet is not scratched or bent.

iii. Run the wire back and forth a few times until it moves smoothly. Again, use caution to ensure the jet is not scratched or bent.

iv. Rinse the jet with methanol.

v. Air dry the jet.

vi. Should the jet become bent, discard the jet and replace it.

11. Any additional maintenance will be noted in the Gas Chromatography/Mass Spectrometry Maintenance Log.

   a. This includes but is not limited:

      i. vacuum pump maintenance (i.e. checking/changing pump oil or changing scroll pump tip seals)

      ii. replacing Weldment Assembly

      iii. replacing chemical trap

   END OF DOCUMENT
I. The Dean Switch is a pressure flow device that allows for two-dimensional gas-chromatography (2D-GC). The instrument is equipped with a Dean Switch, a low thermal mass (LTM) heating/cooling system and a flame-ionization detector (FID) attached to the GC/MS. (ISO/IEC 17025:2005 5.5.3)

A. The Dean Switch instrument has 2 GC columns, an FID detector, and a MS detector. The injection process is the same as the standard laboratory GC/MS. Sample is injected onto the primary column which is in the GC/MS oven. The Dean Switch controls whether sample from the primary column flows to the FID or to the secondary column. The secondary column leads to the MS. The temperature of the secondary column is controlled by the LTM attached to the GC/MS oven door. See diagram below.

1. Selectively controlling the sample allowed onto the second column reduces interfering background around the compounds of interest.
2. Using two different columns (2D-GC) can allow for improved separation of compounds.
3. The primary column connects directly to the Dean Switch.
4. Connections between the Dean Switch/columns/detectors can be pieces of uncoated fused silica tubing.
5. The secondary column can connect directly to the Dean Switch, or connect to an uncoated fused silica tubing of the same diameter as the column, which connects to the Dean Switch.
6. The tubing into the MS must be 0.1 mm diameter to limit the amount of gas flow into the MS.
7. The flow of sample from the primary column to the secondary column is controlled through the Runtime parameters in chemstation by switching the assigned valve on/off.

B. Dean Switch Calculator

1. In chemstation, the primary column must be operated in constant pressure or ramped pressure mode. The Dean Switch pressure is set through the assigned auxiliary channel.
2. Chemstation cannot determine the flow through both columns. Information about flow rate provided by chemstation may not reflect actual flows on the instrument.
3. The Dean Switch Calculator is used to determine the pressure settings for the desired flow rates.
   a. The detectors, carrier gas, column dimensions, temperature and desired flow rates are entered into the calculator. It will provide the pressure for the inlet and the Dean Switch.
   b. The calculator also provides the length required for the tubing that travels from the Dean Switch to the FID based on the chosen column diameter. The larger the diameter of the tubing, the longer the equivalent length will be, therefore a diameter of 0.1 mm is recommended.
   c. The flow through columns will vary with temperature. The desired flow rates are achieved at the entered temperature.
   d. The Dean Switch Calculator is located on the computer desktop
   e. The references below include how to use the calculator

C. The Dean Switch “cuts” portions of the sample from the first column onto the second column

1. Running the sample through the primary column to the FID can be used to identify the approximate times of the peaks for turning the valve on/off in chemstation Runtime parameters.
2. Due to the low levels of analytes being examined in the presence of significant background interference, it may be difficult to identify the target peaks in an extracted sample by FID.
3. A neat standard can be used to identify the approximate retention times and verify performance of the column.
4. From an extracted sample, the windows can be checked by observing changes in response when expanding or shortening the windows. Once established, this does not need to be repeated unless retention times on the primary column have changed.

5. The FID should be off when not being used to minimize gas use.

D. The secondary column is controlled by the LTM heating/cooling system. It is attached to the outside of the door of the GC oven

1. The temperature program is set from the LTM Method in the Instrument Menu of chemstation. The LTM system is capable of much more rapid heating and cooling than the GC oven.

2. The initial hold time or the final hold time can be adjusted without affecting the temperature program for the analysis of the compounds
   a. The first temperature ramp should begin just after the last analyte of interest is cut from the primary column.

3. Because the LTM is outside the GC, the column passes from the LTM system through the GC door. The short sections of the column through these transfer lines are not temperature controlled. This means that the ambient temperature can effect the retention time. The ambient temperature is not critical, but it is important that the variation in temperature is limited throughout a sequence. The climate controlled environment of the laboratory is adequate for use of the instrument.

4. Do not turn off the LTM system, even for maintenance, unless changing the secondary column

E. Maintenance on the Dean Switch instrument is the same as traditional GC/MS in the following areas:

1. Inlet maintenance
2. Ion source maintenance
3. Vacuum pump maintenance
4. Installing the primary column into the inlet
5. Installing the secondary column into the MS

F. Maintenance on the Dean Switch instrument is different from traditional GC/MS in the following areas:

1. Connections from the primary column, secondary column, and FID transfer line to the Dean Switch
2. Unions on the secondary column ends
   a. Dean Switch connections and unions are made with metal ferrules
   b. See Agilent, Swaging sil-tite ferrules
      i. The swaging technique will be practiced prior to any independent maintenance on the instrument
3. Directions for changing the LTM column are included with the purchased column module
4. The Dean Switch provides pressure and gas flow through columns so that venting of the MS is not required when performing inlet or column maintenance. Venting of the MS would be required for any maintenance of the MS transfer tubing.

G. Analysis of MS data collected by the Dean Switch instrument is same as the standard ChemStation software found in the Toxicology Unit

H. Backflushing

1. Backflushing is the reversal of flow on the primary column so that unwanted compounds on the column will be flushed out the column head through the split vent trap instead of continuing to a detector. This can help reduce maintenance required for columns and detectors.

2. Backflushing can be accomplished by lowering the pressure at the inlet or increasing the pressure at the Dean Switch once the compounds of interest have eluted from the primary column.

3. In a sequence, a solvent blank is run prior to each sample. Backflushing is not required to prevent carryover of samples. It may be used to extend the lifetime of columns and detectors.

7. Agilent LTM Series II Rapid Heating/Cooling System for Agilent 7890 Series GCs, Agilent Part Number G6678-90020, April 2011
I. Policy: Procedures for cleaning the ion source.

A. Ion Source Cleaning

1. There isn't a recommended interval for ion source cleaning. The following changes in the tune are indications that the ion source needs cleaning:
   a. Inadequate abundances at high masses
   b. Low overall sensitivity
   c. Missing isotopes
   d. Incorrect isotope abundances

2. For additional information, refer to the HELP menu on any version of the instrument software and look for "Testing for a dirty ion source"

3. Refer to the Cleaning the Ion Source/Changing the Column procedures below if needed.

B. Cleaning the Ion Source (see diagrams below or individual instrument manuals for removing, taking apart, reassembling, and reinserting the source)

1. On the computer, from Instrument Control, go to the pull-down menu and select View-Tune and Vacuum Control
   a. Chemstation: From the Vacuum menu select vent, then click OK. This takes about 40 minutes
   b. MassHunter: From the Vacuum menu select MS Vacuum Control, click on the vent button

2. Chemstation software may be shutdown at this point. Some versions of software will automatically shutdown once venting is complete.

3. Set up the workstation with butcher paper, beakers, microgrit, GC instrument bag, sand paper, etc.

4. Turn the front inlet down to 40°C

5. After the vent cycle has completed, turn the mass spec off using the power switch

6. Remove the cover of the mass spec

7. Open the vent valve (turn to the left), the hissing should not last more than one minute. After venting close the valve.

8. Loosen the side plate front thumbscrew if necessary. The side plate rear thumbscrew should remain unfastened during instrument use. Tighten side plate rear screw for shipping only.

9. Disconnect the side board control cable and the source power cable

10. Open the mass spectrometer

11. Put on lint free gloves

12. The quadrupole wires (top set of green beaded wires and white wires) do not need to be disconnected from the feedthrough board. Disconnect the ion source wires from the feedthrough board (bottom set of green beaded wires and white wires).

13. Disconnect the wires from the ion source

14. Remove the thumbscrews that connect the source heater assembly to the source radiator

15. Gently slide the source out of the source radiator

16. Close the door, tighten the thumbscrew to keep the door closed during source cleaning
17. Take the source over to a clean area, with tools, butcher paper, green sandpaper, and lint free cloth.
18. Set the source on top of the source rest, on top of the lint free cloth.
19. Using a Hex wrench (small black wrench with red top) unscrew the screws on the top of the source starting with the screws on the filaments. Pull out the filaments with the tweezers and set the filaments and screws aside.
20. Take the nut & the washer off the top and set aside.
21. Take the repeller out and take the white ceramic loop off. The latter is not cleaned.
22. Set the plastic pieces off to the side with the screws and ceramic parts.
23. The plastic pieces may be cleaned with a cotton tipped applicator dipped in methanol. Do not touch the plastic pieces with your hands after cleaning them. The ceramic part is too fragile to clean.
24. Only the metal parts require cleaning:
   a. The metal repeller block insert is not directly in the sample path, but may be cleaned if needed.
25. Sand all the surfaces, inside and outside, of all the metal pieces until they are shiny and there are no longer any black marks. Try to use a figure eight pattern when possible to reduce scratching. To sand the inside of some pieces, wrap the sandpaper around the metal rod and sand the inside surface.
26. Mix approximately two scoops of microgrit with methanol to achieve a "slurry-like" consistency.
27. Use cotton tipped applicators to clean any remaining black surfaces. Rinse the microgrit off into a waste beaker before putting the pieces in a 250 ml beaker with DI water.
28. Sonicate the cleaned parts using one of the following schemes:
   a. Traditional
      i. One time in DI water for 15 minutes
      ii. Two times in Methylene Chloride for 15 minutes each (organic waste)
      iii. One time in Acetone for 15 minutes
      iv. One time in Methanol for 15 minutes
   b. Non-chlorinated solvent option
      i. Two times in DI water for 15 minutes each
      ii. One time in Methanol for 15 minutes
      iii. One time in Acetone for 15 minutes
      iv. One time in Hexane for 15 minutes
29. When transporting the parts from one bath to another, use the tweezers to grab the "non-shiny" surfaces when possible. When sonicating be sure to fill the water level up so it ½ to ¾ up the side of the beaker.
30. After the final sonication put metal pieces in a clean dry beaker to dry. They can be allowed to dry overnight at room temperature or dried more quickly in an oven. To dry in oven, cover beaker loosely with aluminum foil and place in the oven at 100 degrees for approximately 15 minutes.
31. Put on lint free gloves and assemble the source:
   a. Assemble the lens stack:

<table>
<thead>
<tr>
<th>5973/5975</th>
<th>5977</th>
</tr>
</thead>
<tbody>
<tr>
<td>repeller</td>
<td>repeller</td>
</tr>
<tr>
<td>interface socket</td>
<td>*repeller block insert</td>
</tr>
<tr>
<td>source body</td>
<td>source body</td>
</tr>
<tr>
<td>drawout lens</td>
<td>extractor lens</td>
</tr>
<tr>
<td>drawout cylinder</td>
<td>extractor insulator is not cleaned</td>
</tr>
<tr>
<td>ion focus lens</td>
<td>ion focus lens</td>
</tr>
<tr>
<td>entrance lens</td>
<td>entrance lens</td>
</tr>
</tbody>
</table>

b. The metal repeller block insert is not directly in the sample path, but may be cleaned if needed.
i. Slide the draw out plate (disk) and draw out cylinder into the source body (ensure the windows of the draw out cylinder align with the windows on the source body).
   1. 5977: insert extractor insulator and then extractor lens

ii. Reassemble the entrance lens and ion focus lens inside the plastic lens insulator.

iii. Slide the lens assembly into the source body.

b. Slide the lens stack into the source body, ensure the prongs on the side are lined up in the center

c. Tighten the set screw into the source body to hold everything together, check that the windows are still lined up on the cylinder and source body
   i. 5977 has two set screws

d. Set the assembly on the source rest

e. Screw in interface socket (not present in 5977)

f. Place the ceramic piece into the repeller, and put the repeller into the repeller assembly
   i. 5977: repeller block insert goes over the ceramic insulator

g. Put the repeller assembly on the source body and tighten the washer and nut. The wires of the repeller assembly are on the same side of the source body as the prongs that stick out

h. Tighten the screws on the top of the assembly

i. Put the filaments on (the one on top is #1). The shield should face out and the filament should face the source

j. Tighten the filament screws

32. Slide the source into the source radiator, tighten the thumbscrews (2) until they are finger tight.

33. Reconnect the wires from/to the feedboard:
   a. Blue wire to entrance lens
   b. Orange wire to ion focus lens
   c. White wires to filament 1 (top)
   d. Red wire to repeller
   e. Black wires to filament 2 (bottom)
   f. Ion source heater wires (green)
   g. Ion source sensor wires (white)
   h. 5977 Extractor Source: Extractor lens wire (brown)

34. Close the analyzer chamber door.
   a. 5977: There will be slight resistance to the closing of the door as the interface tip seal fits into the source body. Be sure the the parts are aligned and do not try to force if strong resistance is felt.

35. Reconnect the side board control cable and the source power cable.

36. Ensure the vent valve is closed. Turn to the right to close, do not over tighten.

37. Apply pressure to the MS door by pushing on it.

38. Turn on the MS. Maintain pressure while the instrument initiates and pumps down.
   a. Pump down can be initiated/completed with or without the instrument software being loaded
   b. Pump Down is typically initiated once the MS is turned on. However, it can also be initiated from the MS front panel (Menu: Maintenance, Item: Pump Down).
   c. If the instrument software is loaded, it can be initiated from the Vacuum menu: Pump Down

39. The turbo speed should rise, or for the diffusion pump it will begin the cycle. Completion of the pump down can be seen on the instrument front panel or the instrument software. Once pump down is complete, the MS temperatures must be returned to operating conditions: when asked about temperatures click APPLY (MS Zones) and OK. From Instrument Control, load a method other than Maint.M, such as TOXSCR.M.
40. The front thumbscrew may be used to hold the door closed. Do not overtighten.

C. Diagrams

1.

2.
D. References

1. See TOX.34
I. Policy: Procedures for changing the column.

A. Changing the Column

1. Injector end

   a. Best practice when changing the column is to first vent the MS and allow to cool

   b. Turn the inlet and oven temperature down to room temperature

      i. **DO NOT** turn off the GC which houses the Dean Switch

      ii. The Dean Switch instrument may not require venting

   c. Unscrew the nut from the inlet, remove the column. The nut may be saved and re-used

   d. Remove the insulator cup under the injector port by removing the screws

   e. Remove the Reducing nut with a 1/2 inch wrench to access and replace the goldseal

   f. Discard the old goldseal, the washer may be reused

   g. Before inserting the new goldseal, sonicate it in methylene chloride for 15 minutes

   h. Put in the washer, then the gold seal. The flush part of the gold seal should be facing up so it comes in contact with the liner. Attach the Reducing nut and insulator cup

      i. The liner rests of the flush part of the gold seal

      i. If a guard column is used, the guard end should be marked. The guard end of the column goes into the inlet.

   j. Unwind a little of the column.

   k. Cut a septum into quarters, insert a piece of the septum onto the column to use as a guide.

   l. Following the septum, thread the column through the nut, then thread an injector ferrule.

      i. The flat end of the ferrule goes against the column nut

   m. Cut 10 cm off the column and check the column under the magnifying glass, it should be smooth and not jagged.

   n. Wipe off the column with methanol

   o. Adjust the septum up the column until there is 4-6 mm of column sticking out of the end of the ferrule/nut

   p. Screw the nut and ferrule assembly into the inlet

   q. Turn on the pressure and inspect the detector end of the column. Stick the end of the column in a vial of methanol and look for bubbles to make sure there is pressure throughout the column.

   r. Make sure the pressure is on before conditioning the column. Set the pressure to at least 12 PSI.

   s. Oven parameters:

      i. Time-30 min

      ii. Temp-30

      iii. Rate-10

      iv. Final Temp-280 (or 5-10 degrees above the highest temperature method)
v. At least 120 minutes (up to 8 hrs - 480 min)
vi. Enter, then hit START
t. The serial # of the column, if provided, should be logged in the maintenance log. Any manufacturer's verification paperwork for the column should be filed in the maintenance log.

2. **Detector end (MS):**
a. Disconnect the nut on the detector end with a wrench; slide the column completely out of the transfer line. The nut may be saved and re-used.
   i. 5977 MSD: unscrew the knurled nut and remove the tip seal
b. Cut a rubber septum into quarters, insert a piece of the septum onto the new column to use as a guide.
c. Insert the nut
d. Insert the ferrule, the pointed end rests against the nut
   i. Self-tightening nut uses the short ferrule (same ferrule as used in the inlet end)
e. Wipe the column down with methanol
f. Cut the column approximately 3-8 cm (1-3 inches), check that the cut is straight and not jagged.
g. Wipe down the column again with methanol
h. Insert the column into the detector, then move the septum and nut up to the thread and lightly screw the nut on
   i. Start backing up the column, approximately 1 mm sticking out to the MS
   ii. The column insert tool can be used to assist in proper measurement of the column
   j. Continue backing up the column, tightening the nut, and checking the distance until the proper distance of 1 mm is achieved. Finish tightening the nut until it is sufficiently tight. It may make noise to indicate a tight fit.
   ii. If using a self-tightening nut: tighten to finger tight, there will not be any noise.
k. 5977 MSD: reinstall interface tip seal
l. Close the doors to the oven and MS

B. **Dean Switch End**
1. Insert nut and Flexible Metal Ferrule (or equivalent) on end of column, swage according to instructions in Agilent's "Swaging SilTite Ferrules"
2. Insert column into the Dean Switch (the center port is for the primary column)

C. **Clipping the Column**
1. As sections of the column become contaminated, they can be removed.
   a. Typically 1 or 2 loops from the inlet side will need to be removed to bring the column to acceptable performance
   b. One loop is approximately 50 centimeters
2. The procedures for changing the column on the Inlet end can also be used to "clip" the column to extend the life of the column, without replacing the column.
3. The MS is left on and does not need to be vented, as long as the maintenance is done quickly. The oven and inlet are cooled so that the inlet column assembly can be taken apart.
4. The desired amount is clipped from the column and then the column is re-inserted into the inlet.
5. Log in the maintenance log.

END OF DOCUMENT
I. Policy: The following procedures will be used for cleaning the inlet. *(ISO/IEC 17025:2005 5.5.3)*

A. The procedure is from the Agilent website—see reference on document.
Agilent Technologies

Split/Splitless Inlet Cleaning Procedure
5890 and 6890 Split/Splitless Inlets

The Split/Splitless inlet will become active (degrading certain types of compounds) over time. In some cases, just changing the liner and the gold seal will not remedy this problem. In these cases a more vigorous cleaning procedure must be implemented. The following procedure has been developed to help in this process.

The following parts and solvents will be needed:
- 38-caliber brass gun barrel cleaning brush with metal rod.
- Methylene Chloride
- Acetone
- Methanol
- Glass transfer pipettes with bulb
- "Kimwipes"
- Safety Glasses
- Lab Coat
- Nitrile Chemical Resistant Gloves

1. Cool the inlet. This is best accomplished by reducing the inlet temperature to 40°C. Leaving the inlet on allows the injection port fan to continue to operate thus aiding in cooling the injection port. It is also helpful to lower the oven temperature to 40°C. These steps can be performed from the GC front panel or the ChemStation software.

2. After the inlet has cooled sufficiently (at least 70°C), turn the inlet flow off.

3. If an autosampler is in place, remove tower, tray and top cover.

4. While wearing appropriate safety apparel, remove the weldment assembly that covers the GC liner. Remove the liner completely from the GC. Notice a flow line that sits below the weldment, this is the split vent flow line. This should have a 7/16" swagelok fitting, loosen the fitting and remove the split vent flow line.

5. Turn the GC oven off and open the door. Loosen and remove the GC column nut from the inlet. Place a septa over the injection port end of the column, so as NOT introduce O2 to the column. Remove the insulator and the gray reducing nut that houses the gold seal and washer from the bottom of the inlet.

6. The injection port consists now of just a long metal tube. All flow lines and the glass liner have been removed from the assembly. Dip the gun brush into the Methylene Chloride and insert the brush into the inlet completely. MOVE THE BRUSH UP AND DOWN DO NOT TWIST. Perform this step twice. Then use the glass pipette to rinse the inlet with Methylene Chloride. Follow the Methylene Chloride rinse with an Acetone brush and rinse and finish with a Methanol brush and rinse.
7. After the last Methanol brush and rinse, dab the top of the inlet with a "kimwipe" to remove any residual solvent that may pool. Look down through the assembly to make sure that it is free of particles that may stick to the walls of the inlet. Heat the inlet to 85°C to flash vaporize the solvent away. (THIS IS A CRITICAL STEP THAT CANNOT BE BYPASSED).

8. Reassemble the inlet with a new gold seal, washer, liner, and a new ferrule on the column. Make sure that the column is re-cut prior to installation. Reinstall the split vent line and tighten. Reinstall the weldment assembly (NOTE: Prior to reinstalling the autosampler assembly turn the injection port flow back on. Do not turn the injection port temperature on.) Check to make sure that proper head pressure can be obtained, if not recheck all fittings for leaks.

Before increasing the temperature, let the inlet sit at 65°C for about 10 minutes to remove any oxygen that might be in the inlet. **THIS STEP MUST NOT BE SKIPPED. IF IT IS THE CLEAN PARTS JUST INSTALLED WILL BE REOXIDIZED.**

9. After 10 minutes heat the inlet to operating conditions. Let it stabilize for 5 minutes. Make at least 2 blanks runs before any analyte is injected, to make sure that the inlet has been successfully cleaned. Be aware this technique does not work on all applications, and over time will not bring the inlet back. The assembly will need to be changed in time.

Please make sure that there is full understanding of this procedure prior to disassembly of injection port. If you are unable to complete this procedure please **Call Agilent**.

1. Agilent Technologies Split/Splitless Inlet Cleaning Procedure, a16022.doc

2. Agilent 6890 Gas Chromatograph, Maintaining Your GC, March 2007, Part Number G1530-90010
I. Policy: The following is the procedure for vacuum pump maintenance.

A. General Information
   1. There are three types of GC/MS vacuum pumps that may be found in the Toxicology Unit:
      a. Oil rotary pumps
      b. Dry scroll pumps
      c. Diaphragm pumps

B. Dry Scroll Pump Maintenance
   1. The only maintenance for a dry scroll pump is to change the tip seal. The tip seal should be changed approximately every 9000 hours or when there is an increase in pump base pressure:
      a. Vent the Mass Spec. See the instructions in GC/MS-Cleaning the Ion Source for proper venting.
      b. Make sure the Mass Spec power is OFF
      c. Turn off pump and remove electrical cord
      d. Remove the Front Cowling and Outboard Housing by removing their respective bolts
      e. Change the Tip Seal
      f. Attach Front Cowling and Outboard Housing
      g. Plug in electrical cord and turn on pump
      h. Pump down MS
      i. Make an entry in the maintenance log
      j. Exterior surfaces may be cleaned with isopropyl alcohol
C. Oil Rotary Pump Maintenance

1. If possible, the pump oil should be changed approximately every 6-12 months and in conjunction with a source cleaning when the instrument is already vented
   a. Vent the Mass Spec. See the instructions in *GC/MS-Cleaning the Ion Source* for proper venting.
   b. Make sure the Mass Spec power is OFF
   c. Place a container under the oil drain plug (drain valve) on the pump to catch the oil
   d. Open the oil filler located on the top of the pump
   e. Open the oil drain plug on the bottom of the pump and let the oil drain out
   f. Pour a small amount of clean oil through the oil filler to ensure all the dirty oil has been drained out
   g. Replace the oil drain plug
   h. Fill the oil filler with clean oil SLOWLY while viewing the oil sight glass
   i. Fill to at least ½ full in the oil sight glass, but do not fill completely (the oil level should remain visible in the window)
   j. Close the oil filler
   k. Make an entry in the maintenance log
   l. Once the pump is working again, check the oil level to ensure it is at least ½ full.

D. Diaphragm Pump Maintenance

1. The diaphragm pump does not require routine maintenance.

E. References

I. Policy: The following is the procedure for cleaning the GC liners. (ISO/IEC 17025:2005 5.5.3)

A. The criminalists should remove the glass wool from the liners and place them in a storage location away from clean liners.
B. Liners for controlled substances and toxicology can be cleaned at the same time or separately; the procedure is the same.
C. SAFETY: Label all your glassware and put chemicals away when you are finished with them. Use Nitrile gloves, and clean the liners under a hood.

1. Soak the liners in chromic or nitric acid (cleaning solution) for one hour
   a. The cleaning solution is an acid. It is located in the acid cabinet.
   b. Use a pasteur pipette to thoroughly wash the liners with the cleaning solution and attempt to submerge all the liners in the solution
   c. Recycle the cleaning solution acid after use (by pouring back into the bottle)
2. Rinse with distilled water (4-5 times with a pasteur pipette or squirt bottle). The waste should be collected into a beaker or equivalent and the water and acid waste should be disposed of in the acid waste.
   a. The liners should be placed onto paper towels, or another clean material, in between rinses to dry.
3. Rinse with methanol (4-5 times with a pasteur pipette or squirt bottle). The methanol waste should be disposed of in the organic waste.
4. Rinse with hexane (4-5 times with a pasteur pipette or squirt bottle). The hexane waste should be disposed of in the organic waste.
5. Soak the liners in siloxane or silane for 30 minutes (attempt to submerge all the liners)
   a. Cover the siloxane or silane with parafilm (or equivalent) or it will evaporate.
   b. Recycle the siloxane or silane after use (by pouring back into the bottle)
      i. The Siloxane Solution is 10% Dichlorodimethylsilane in Pentane. The bottle should be labeled with the following hazard information:
         1. Blue 3, Red 4 and Yellow 3.
6. Rinse with toluene (4-5 times with a pasteur pipette or squirt bottle). The toluene waste should be disposed of in the organic waste.
7. Rinse with methanol (4-5 times with a pasteur pipette or squirt bottle). The methanol waste should be disposed of in the organic waste.
8. Rinse with hexane (4-5 times with a pasteur pipette or squirt bottle). The hexane waste should be disposed of in the organic waste.
9. Air dry completely (overnight) under the hood on a paper towel.
10. Handle the liners with kim-wipes (or equivalent). Do NOT handle the clean liners with bare hands or gloves.
11. Put the liners into their protective plastic sleeves (or equivalent) and return to the appropriate section.

END OF DOCUMENT
I. Policy: The following is the procedure for performing data analysis of full scan data collected using the GC/MS.

A. Instructions based on Instrument #10, MSD ChemStation ver. E.02.00.493. Instructions do not account for discrepancies between software versions (some screen images are from Instrument #7).

B. These suggestions are intended to be a guide for use and slight variations may be made for file names, names of folders, etc.

1. The Macros may be used to perform data analysis for comparison identification and qualitative analysis. If desired, select the macro to be used (eg. Generic 3-panel, Meth 3-panel, etc). (CCC Reports>Generic 3-Panel).

   a. Some macros may require a blank sample containing an IS (not a solvent blank) and a standard that has been annotated

   b. The data file for the sample is loaded first. Ensure the chromatogram is loaded and desired peaks are integrated before selecting the macro.

   c. The macro will request the files needed for data analysis. The next data file requested is typically the blank (the matrix blank shot at the beginning of the sequence can be used). Then the data file for the annotated standard to be used is loaded.

   d. The Macros are a tool created for expediency; it is still up to the analyst to evaluate chromatographic criteria such as peak resolution and shape, retention times, and acceptable spectral matches for qualitative confirmation.
The MS parameters may have to be altered to obtain acceptable spectral matches. The scan for the sample or standard can be changed as well as the High X, or Y range to optimize the spectra.

e. The Total Ion Chromatogram (TIC) and Spectra (MS) for the files of interest may also be obtained in the Annotate Mode. The annotation mode allows for more alterations than the pre-programmed macros. (CCC Reports>Annnotate Mode)
   i. The annotated chromatograms can also be printed when in the Annotate Mode (Annotation>Print Window)

f. A Total Ion Chromatogram (TIC) and Spectra (MS) of the sample and standard used for identification can also be printed manually (without using the Macros).
   i. Load The data file of interest (TIC in window 2)
   ii. Click on the peak of interest to obtain the spectra (SCAN in window 1)
   iii. Label the TIC and SCAN appropriately
   iv. Print the TIC & SPECTRUM
2. Comparison of spectra between a case sample and standard may be done manually (without using the Macros)
   a. Load the data file of interest and click or scan the desired peak
   b. Load the appropriate standard and click or scan the desired peak
   c. In the Command bar merge the two spectra, MERG
   d. In the Command bar Normalize the two spectra, NORM
   e. In the Command bar draw the two spectra in a window with the appropriate X and Y parameters, eg. DRAW 3,X,38:150:0:2000
   f. Label each spectra with the appropriate information (eg, case identifier, standard)
   g. Print the new window (eg. 3)

3. Chromatograms may be overlaid by using the Overlay Chromatograms tool (Tools> Overlay Chromatograms)
   a. Select the data file for overlay
   b. Integrate the Chromatograms
   c. (Chromatogram>Integrate)
d. In the Command Bar draw the two chromatograms in the same window, eg. DRAW 3,R0
e. Label each chromatogram with identifying information (eg case number with request, standard name)

![Select Files for TIC Overlay](image)

4. Printer settings
   a. Set the default printer to the desired printer (File > Select Printer)
      i. Images for casework that will uploaded into LIMS are printed in the TIFF format
         1. See TOX.10 for information on uploaded images into LIMS
      ii. Images for electronic batch records are usually in the PDF format
         1. Standards, QCs, Curve data, Method, and Sequence are included in the electronic batch records
      iii. Images saved to the Temp folder on an instrument computer can be accessed from other computers on the network

5. Ion Requirements
   1. See specific method for required ions to make identification.

END OF DOCUMENT
I. Policy: The following is the procedure for performing data analysis of SIM data collected using the GC/MS.

A. Instructions do not account for discrepancies between software versions

B. These suggestions are intended to be a guide for use and slight variations may be made for file names, names of folders, etc.

1. Chemstation is used to create a calibration curve and quantitate samples
   a. Chemstation uses the responses and concentrations of the standards and internal standards to create the calibration curve
   b. The analyst should ensure the concentrations used in the extraction are entered correctly in Chemstation. (Calibrate > Edit Compounds > Calibration Tab > Choose desired analyte)
   c. Responses for the calibration curve are updated for each batch of samples.
      i. The response can be updated manually by printing the standards and then entering the responses for all internal standards and analytes (Calibrate > Edit Compounds > Calibration Tab > Choose desired analyte response)
      ii. A single level can be updated using Calibrate > Update - one level
         1. The file to be used should be loaded first
         2. Select the desired level to update. For single file per level, the responses will be replaced. The retention time can also be updated here.
      iii. All levels can be updated at once with Calibrate > Update - Quick levels update
          1. Do you want to clear responses first > Yes
          2. Requant files before update > Yes
          3. Select Single Data File/Level
          4. Chemstation will ask for the file for each level
          5. Chemstation will then ask to update the retention times
             1. analyst can chose one level to be used for this update
             2. retention time does not need to be updated
     d. Run Method on Standards
        i. Select Standard data file, and select Method > Run Method
        ii. Repeat for each Standard, QC, and matrix blank
           1. Ensure integration of all internal standards, and analytes are acceptable
   e. Update Qualifier ion relative response ratios
      i. Calculate the average response ratio for all Qualifier ions identified in the procedure.
         1. The average response ratio for each Qualifier ion is the average of the ratios of the standards used to create the calibration curve.
      ii. Update the relative response ratios for each analyte and IS. The calculated values are entered manually (Calibrate > Edit Compounds > Identification Tab).
f. Calibration Curves and Data for each analyte can be printed from the Edit Compounds screen or from Calibrate > Print Calibration Curve.
   i. Curves and data are usually printed in the PDF format for electronic batch records.

g. Quantitation reports can be printed individually or in a batch.
   i. To print one report, load the data file and select Method > Run Method.
   ii. To print reports for multiple files use Tools > DOLIST for the desired operation (i.e. Run Method) and then select the files to be run.

2. Quantitation reports and Calibration Curves can be obtained automatically by using customized Macros. (CCC Reports > Export Quant)
   a. Images for case samples can also be obtained automatically during this process.
   b. A batch file is created for ease of placing into LIMS.
   c. A results text file is created for importing results into the Toxicology Database.

3. Printer settings.
   a. Set the run method printer to the desired printer (File > Select Printer).
      i. Images for casework that will be uploaded to LIMS are printed in the TIFF format.
         1. See TOX.10 for instruction on entering images into the case records.
      ii. Images for electronic batch records are printed in the PDF format.
         1. Standards, QCs, Curve data, Method, and Sequence are included in the electronic batch record.
      iii. Images saved to the Temp folder on an instrument computer can be accessed from other computers on the network.

END OF DOCUMENT
I. Policy: The following is the procedure for running a sequence on the GC/MS.

A. Instructions created on instrument 12, using MSD ChemStation ver. E.02.00.493. Instructions do not account for discrepancies between software versions (some screen images are from instrument 7).

B. These suggestions are intended to be a guide for usage and slight variations may be made for file names, names of folders, etc.

1. Create folders on the local drive (through explorer) for the storage of (a.)Data and (b.)Sequence information. Create folders as instructed below.

2. The default data location is C:\msdchem\1\DATA\xxxxxx (some systems are configured with D:\ as the default or C:\DATA).

3. The default sequence location is C:\msdchem\1\sequence\xxxxxx (some systems are configured with D:\ as the default).

4. Open the Instrument software application by double-clicking the instrument icon on the desktop. Wait for the system to initialize.

5. Load any currently existing sequence as a template (analyst may have to copy an existing sequence into their folder using Explorer). (Sequence > Load Sequence).

   a. Analyst should create a new sequence for each batch of samples run on the instrument (typically the sequence is named by date)

   b. Using a sequence of the same type of extraction as a template will minimize alterations required to prepare a sequence

6. If the analyst uses a past sequence, they must ensure that the standards and concentrations listed match the concentrations used.
7. Make changes to the sequence by selecting Edit Sequence from the menu bar (Sequence > Edit Sequence).
   a. The Sample Log Table window opens.
   b. Make sure the Data Path is correct. If it is not correct, browse to the correct data path
      i. It is helpful to have all the data for an extraction in one folder, named with identifying information
         (eg. D:\DATA\meth bld 12-12-12)
   c. In the Method Data box, ensure the local method storage location is displayed.
   d. The default method location is C:\MSDCHEM\METHODS (some systems are configured with D: as the default).
8. The Sample Log Table can contain different fields. Ensure the following fields are present and populated as instructed below.

a. **Type** - click the dropdown menu to select the appropriate sample type (typically sample or blank)

b. **Vial** - indicate the location of the sample vial on the autosampler tray

c. **Sample** - enter a sample description; the description should be either blank, Std or QC with concentration, or the specimen lab number including request.
   i. MassHunter: this field is titled **Name**

d. **Method/Keyword** - enter the method to be used for data acquisition and analysis
   i. Note: the Data Path may be changed from one folder to another mid-sequence by using the Method/Keyword field. In the Type field select Keyword and indicate the new Data Path in the Comment/Keyword String. See Chemstation Help for additional Keywords
      1. MassHunter: There is a separate field titled **Data Path** that can be used to change the folder for data files within the sequence
   ii. Mass Hunter: the **Keyword** field is separate from the **Method** field

e. **Data File** - enter the name of the data file.
   i. The sample in line 1 of the sequence table should be named using a date format, such as MMDDYY01 or YYMMDD01, each subsequent line should be identified similarly, with only the two digit number at the end of the name changing to correspond with the sample line.
   ii. For example, in a sequence with 18 lines, the sample in line 1 will be identified as YYMMDD01, while that in line 18 will be YYMMDD18. To fill in this data automatically, enter the correct name in line 1, highlight/select the entire column, then right click and select fill column and increment. This can also be done from the sequence menu-Additional Sequence Options - Resequence Datafile.

f. **Comment/Keyword String** - enter a description (such as lot # of standard, the solvent used, any dilution used, or coroner blood type)
   i. MassHunter: the **Comment** field and **Keyword String** fields are separate

g. **Multiplier** - enter the correct multiplier required if a dilution has been performed, or enter 1.00000
   i. MassHunter: this field is titled **Dil**

The following fields may also be present:

h. **Level** - complete per analytical method requirements, if no instruction exists, leave blank

i. **Update RF** - complete per analytical method requirements, if no instruction exists, select no update

j. **Update RT** - complete per analytical method requirements, if no instruction exists, select no update

k. **Update QI** - complete per analytical method requirements, if no instruction exists, select no update
l. **Update MZ** - complete per analytical method requirements, if no instruction exists, select no update

m. Additional MassHunter fields: Method Path, DA Method Path, DA Method File

9. Save the sequence
   a. Select Sequence > Save As
   b. Navigate to the correct location on C:\ (default location should be C:\msdchem\1\sequence\xxxxxx) *(some systems are configured with D:\ as the default)*.
   c. Name the sequence using a date format, such as MMDDYY## or YYMMDD##, where the ## is a two digit number indicating the sequence number. For the first sequence of a particular day, the sequence would be named YYMMDD01, each subsequent sequence would be numbered 02, 03…as appropriate.
   d. Ensure the sequence is saved with the appropriate file extension (.s for Chemstation and .s or .sequence.xml for MassHunter).

10. Print the Sequence
    a. Select Sequence > Print sequence > Brief Format
       i. MassHunter: select the printer icon and then Print sequence
    b. The printed sequence will be added to the run packet.
    c. The sequence will be archived with the batch results

11. Start the Sequence and check that the information in the Run Sequence screen is correct before beginning a run
    a. *(Sequence > Run Sequence)* to run from the beginning of the sequence
b. (Sequence > Position and Run Sequence) to run from a certain place within the sequence

c. The program will ask if the analyst wants to process the keywords before beginning the sequence. If there are keywords that need to be processed, the analyst must select Yes
I. Policy: The following is the policy and procedure for storing data.

A. Electronic data files
   1. Analysts shall periodically back up all data files on a storage disk. Typically all instrument data for a year is stored to a back up at the beginning of the proceeding year. Data files shall be maintained on the instrument of origin for a period of one year after the last backup made on the disk. Analysts may back up files on an external hard drive more frequently, but a disk should be created yearly.
   2. The back up copy will be kept at a location designated by the Manager/Supervisor.

B. GC/MS Methods and Dynex Assays
   1. All methods will be backed up onto a storage disk. A copy will be kept at a location designated by the Manager/Supervisor.
   2. Minor changes may be made to methods without validation.
   3. A record of the instrument operating parameters will be kept (Supplemental 4.13.2.5.2). This may be accomplished by recording any deviations from the default method, printing a copy of the method used at the time of analysis, or storing a hard copy in the respective validation binder.
   4. Examples of changes that can be made to GC/MS methods that do not need validation include, but are not limited to, changing the solvent delay, end run time, SIM windows, and EM voltage.

C. Copies of Data/Forms
   1. Copies of instrument reports or forms may be hard copies or electronic format.
   2. Hard copies of data are typically printed out at the time of analysis. These hard copies may be scanned and stored in an electronic format (such as pdf) anytime after they have been printed out.
   3. Copies (print or electronic) of Autotunes shall be kept for at least the current accreditation cycle.
   4. Copies (print or electronic) of the Standards and QC’s shall be kept for at least the current accreditation cycle.
   5. Equipment Logs shall be kept for at least the current accreditation cycle.

I. The following is information about performing immunoassays on casework samples.

A. General Information

1. Immunoassay testing is a method for detection of common drugs or drug classes in biological specimens. Immunoassay is an analytical technique that uses antibodies or antibody related agents for selective determination of sample components. EIA makes use of an enzyme label which may use antibodies immobilized onto the surface of the microtiter plate. The immunoassay technique available to the laboratory is a competitive, solid-phase, heterogeneous, enzyme immunoassay (EIA). Immunoassays can provide great sensitivity to target analytes and are excellent methods for exclusionary evidence. In most cases, immunoassays can be used to "rule out" the presence of target analytes.

2. Immunoassays are considered "presumptive" tests, due to the fact that immunoassays are not always specific for a single analyte. Caution must be exercised when basing opinions solely on immunoassay results.

3. The following are definitions of terms commonly used in immunoassay screening:
   a. **assay**: qualitative determination of the components of a material. In screening, there is a separate assay for each illicit drug and/or drug classes.
   b. **batch**: an assay including blank, controls, calibrators and case samples.
   c. **calibrator**: a sample prepared with a known concentration of analyte for calibration of the assay. Where possible, calibrators should be prepared in a matrix similar to that of case samples.
   d. **high calibrator (positive control)**: a sample containing more analyte than the cutoff calibrator.
   e. **cutoff calibrator**: a sample containing an analyte concentration that delineates between a positive or negative screen result.
   f. **low calibrator (negative control)**: a sample containing more analyte than the blank calibrator and less than the cutoff calibrator.
   g. **blank calibrator**: a sample containing no analyte
   h. **quality control (QC)**: a sample in which the concentration is between the cutoff and the high control

4. Refer to *Screening Validation* binder(s) for information on validated assays. The validated assays can be programmed into an automated microplate analyzer. Minor deviations from plate manufacturer's instructions may be performed if adequate calibration and control samples are used.

5. **Batch analysis**: The following are analyzed and monitored:
   a. Serum Negative Calibrator, Oral Fluid Negative Calibrator, or Immunalysis Negative Calibrator
   b. Serum Cutoff Calibrator, Oral Fluid Cutoff Calibrator, or Immunalysis Positive Calibrator
   c. Blank Urine/Blood Calibrator
   d. Low (negative) Urine/Blood Calibrator
   e. Cutoff Urine/Blood Calibrator
   f. High (positive) Urine/Blood Calibrator
   g. Case samples
   h. QC Sample or Positive Control Sample with blood and urine analysis (optional)

B. **Urine Cutoff Values**: The following cutoff values are used for the urine assays:
1. methamphetamine 500 ng/mL
2. amphetamine 500 ng/mL
3. morphine 300 ng/mL
4. benzoylecgonine 300 ng/mL
5. oxazepam 300 ng/mL
6. COOH-THC 50 ng/mL

C. **Blood Cutoff Values:** The following cutoff values are used for blood assays:
   1. methamphetamine 20 ng/mL
   2. amphetamine 20 ng/mL
   3. morphine 20 ng/mL
   4. benzoylecgonine 50 ng/mL
   5. oxazepam 50 ng/mL
   6. COOH-THC 20 ng/mL

D. **Blanks**
   1. Blank urine: Drug free urine with sodium fluoride is analyzed with each urine assay batch, as a blank.
   2. Blank blood: Drug free whole blood with sodium fluoride is analyzed with each blood assay batch, as a blank.
      a. Drug free human urine and whole blood must be obtained. The blood and urine used may be obtained from a Blood Bank, lab staff or a vendor such as UTAK Laboratories.

E. **Specimen Requirement:** A minimum of 200µL of blood and 60µl of urine sample is needed for the respective analysis.

F. **Equipment:** This procedure uses the following laboratory equipment and supplies:
   1. 12 x 50-100 mm disposable culture tubes
   2. programmable digital dilutor (Hamilton Microlab 500 or equivalent) or 10-1000 µL pipettor and disposable pipette tips
   3. vortex mixer (Thermolyne or equivalent), if not using digital dilutor
   4. specimen rocker (LabQuake Shaker or equivalent)
   5. Dynex DSX
   6. Micro-Plate EIA Kits
   7. Forensic Diluent

G. **Dilutions:** Samples must be diluted prior to application on the automated immunoassay instrument. Samples should be diluted using the digital diluter but may be diluted by hand if necessary. The following dilutions should be carried out:
   1. **Urine Dilutions**
      a. 1:60 (i.e. add 15 µL of sample/calibrator to 885 µL of forensic diluent)
         i. Methamphetamine
         ii. Amphetamine
         iii. Morphine
         iv. Benzoylecgonine
         v. Oxazepam
         vi. COOH-THC.
   2. **Blood Dilutions**
      a. 1:5 (i.e. add 200 µL of sample/calibrator to 800 µL of forensic diluent)
         i. Methamphetamine
ii. Amphetamine
iii. Morphine
iv. Benzoylcegonine

b. 1:10 (i.e. add 100 µL of sample/calibrator to 900 µL of forensic diluent)
   i. Oxazepam
   ii. COOH-THC

H. Preparation and Analyzing in Batches

1. Select one vial or urine jar for analysis after opening and documenting the evidence per procedures.

2. The following is the sampling procedure for screening: Homogeneity is assumed among multiple containers within an envelope or kits as long as containers were collected sequentially, from a single event, into multiple similar containers, and having similar volumes. The reported results pertain to the entire item (all containers), not just the tested amount or the vial analyzed.

3. Inspect the samples visually for any visible clotting or discoloration. The analyst should note any clotting or discoloration.

4. Bring the samples to room temperature before analysis.

5. Gently mix the samples to be analyzed before pipetting. This mixing assures homogeneity within the sample. Typically samples are mixed for a minimum of 20 minutes.

6. The analyst may homogenize samples that cannot be pipetted because of clotting.

7. When analyzing hospital vials, the analyst should attempt to analyze a vial (or vials) containing preservative and anticoagulant. The vial(s) selected should be indicated in the notes. It should be indicated in the notes if multiple vials are combined and used for analysis.

I. Interpretation of Results: If the following quality control conditions are not met, the assay may need to be repeated or sample re-screened.

1. Calibrator criteria:
   a. The minimum optical density (O.D.) of the blank calibrator is greater than the maximum optical density of the negative calibrator (low).
   b. The minimum optical density of the negative calibrator (low) is greater than the maximum optical density of the cutoff calibrator.
   c. The minimum optical density of the cutoff calibrator is greater than the maximum optical density of the high calibrator (high).
   d. The duplicate optical densities of the calibrators should be within 15% of their average.
   e. The results from the immunalysis/serum/oral fluid negative calibrators and immunalysis positive/serum/oral fluid cutoff calibrators provided by the manufacturer may be used as additional information in evaluating assay performance.

2. Sample criteria:
   a. The optical density values for the case samples should be checked to ensure correlation between the duplicates. If the standard deviation (S.D.) is greater than 0.2 and the coefficient of variation (C.V.) is greater than 12% for a negative result, the sample should be re-screened.
   b. A not detected sample may be reported indeterminate if both duplicate optical densities are within 15% of the cutoff. These samples may be taken to confirmation.
   c. A sample for which one O.D. result is positive, and one is negative or indeterminate:
      i. If the duplicate results are within 15% of the cutoff, the sample may be reported as positive and proceed to confirmation.
      ii. If either of the duplicate results is not within 15% of the cutoff, or if they exceed the S.D. and C.V. criteria in paragraph 1.I.2.a, the sample should be re-screened.
   d. A sample for which one O.D. is negative and one is indeterminate:
      i. If either of the duplicate results is within 15% of the cutoff, the sample may be reported as indeterminate and proceed to confirmation.
ii. If either of the duplicate results is not within 15% of the cutoff and if they exceed the S.D. and C.V. criteria in paragraph 1.1.2.a, the sample should be re-screened.

3. Percent Displacement: The percent displacement (formula listed below) is a calculated number that may be monitored to evaluate the performance of the assay. The calculated number should fall within the recommended limits specified in the Orasure's Lot Specification Sheet. Although falling outside the recommended limits does not invalidate an assay, it is recommended that the manufacturer is contacted for assistance if this issue persists.

\[
\% \text{ Displacement} = \frac{\text{O.D. Serum Neg Cal} - \text{O.D. Serum Cutoff Cal}}{\text{O.D. Serum Neg Cal}} \times 100\%
\]

a. This percentage displacement can be noted on the Screening Report for each assay; and checked against the ORASURE Plate Specifications (sent with each kit) to ensure it falls within an acceptable range.

\[
CV = \frac{SD}{X} \times 100
\]

\[
SD_{duplicates} = \frac{\sum d^2}{2n}
\]

J. Quality Control Re-screen

1. 1 out of every 10 negative samples should be re-screened to confirm the original result.
   a. Sample with requests for drugs the laboratory does not confirm may not be counted toward re-screens.

K. Quality Log

1. A quality log shall be kept in the Toxicology Unit and contains details of unsuccessful screening assays.
2. The definition of an unsuccessful assay is that a plate assay was started and there were no reported results for that plate. If the error is an operator error (i.e. vials were placed in the wrong positions) that can be remedied, it may not constitute an unsuccessful assay and would not need to be logged in the quality log.
3. If there is a mechanical issue with the instrument, the mechanical issue should also be recorded on the instrument maintenance log regardless of the ability to recover an assay.

END OF DOCUMENT
## I. Policy

The following is the procedure for using the Dynex for routine casework analysis. *(ISO/IEC 17025:2005 5.5.3)*

### A. Instructions for Operation

1. Instructions created with Revelations Software 6.0.
   - Minor deviations from the instructions may occur with software updates.
2. Plates and reagents should be at room temperature.
3. Turn on DSX system - printer, monitor, computer and instrument.
4. Double click on "Revelations" icon on desktop. Enter User and Password if necessary. Press "Enter".
5. Select "Connect to DSX (using Port 1)". Select "Do it" to connect immediately. Self Test will start automatically.
6. Verify that all parameters have passed during Self Test and print copy to be placed in DSX binder. See Dynex Maintenance.
7. A worklist can be ordered by using a button with preset assays or by loading individual assays.
   - To order a worklist by using a button:
     i. Click button for preferred assays (assays will automatically be added for worklist)
   - To order a worklist by loading individual assays:
     i. Select "New" then "Worklist"
8. A worklist can be created by using the barcode scanner or manually by entering Sample IDs. The Sample IDs using barcodes are the laboratory #s in barcode form and is the preferred procedure for casework runs
   - To create a work list using the barcode scanner:
     i. Select "Scan barcodes using a new sample batch". Click "OK". Click on "Load sample caddy". Load samples in sample rack with barcodes aligned with gaps in sample caddy for proper scanning. Click Enter or green "checkmark". Click on position of last sample and assign. Click "Scan Sample IDs".
     ii. Samples without barcodes, or unreadable barcodes, can be entered manually by clicking on the sample and selecting "Manual Entry" and typing the laboratory #. These numbers can be distinguished as they show up within brackets.
   - To create a worklist manually:
     i. Uncheck "Scan barcodes using a new sample batch". Click "OK". Type in Sample IDs (laboratory #s).
     ii. The manual worklists should be compared to the position in sample rack to ensure correct sample placement.
   - Each sample in worklist must have a unique name. If separate aliquots from the same sample are to be analyzed, a different identifier must be used. (Example: add "benzo" to end of sample name)
   - Control or QC samples run in the batch may be named by the date and type of sample (example: a positive control run on 10/30/09 could be called 091030high)
9. The assays to be run will appear at the top of the grid. Add/Delete assays until all desired assays are present.
10. Select samples for analysis by entering a checkmark beneath the assay (check or highlight box that corresponds to case and assay). Once all samples are assigned to assays, click "OK".
11. Click the green "play" button to build the timeline. The timeline can be viewed by pressing the blue "down arrow" button. The arrow buttons can be used at any time to toggle between the timeline and results. Click the green "fast forward" button to begin loading the instrument immediately.

12. At the prompt for lot numbers, click Enter or green "checkmark".
   *Note: Lot numbers are tracked on Session Worksheet.

13. Load sample caddy if work list created manually. Click green "checkmark".

14. Load plate as shown. Enter plate identifier (example: \textit{091030meth-1} for the first plate of Methamphetamine run on October 30, 2009). Click green "checkmark". Repeat with each plate to be loaded.

15. Load fluid and consumables as directed. Click green "checkmark" for each item loaded.

16. Empty waste containers if needed and click "OK". The instrument will begin analysis.

17. Results will appear as each plate is finished. Print results in desired format for archiving. Click the blue "up arrow" if needed to toggle between the timeline and results.

18. After the run has completed, click the red "stop" button to unload plates and fluids.

19. After the last run of the day, click "daily wash" button.
   a. Uncheck "Scan barcodes using a new sample batch". Click "OK".
   b. Highlight A1 to A8 for each assay. Enter "1" on "First Auto Sample ID" field. Click "Auto Assign Sample IDs" button. Click "OK".
   c. Click green "play" button. Click green "fast forward" button.
   d. Click green "checkmark" six times. (The daily wash does not require that any well-plates be loaded.)
   e. Load DI water for each bottle and click green "checkmark" for each. Click "OK". After the run has completed, click the red "stop" button.

20. Close "Revelations" program and turn off DSX system.

22. A Session Worksheet should be filled out with the relevant traceability information and kept with batch results.

B. Reporting Instructions

1. A copy of the case report for the screening results is included in the case notes. Case reports are not generated from Revelations software, they are generated by an Access database from a text file created by Revelations.
   a. Open the "Dynex Report Database" (Access Database) icon on desktop.
   b. Select "Import Dynex Text File". Select the text file to import. (Text file will have the same name as the plate entered in the Revelations software)
   c. After all files have been imported, select "Reports"
   d. Select appropriate filters. Results can be filtered by "Sample ID", "File Name", "Date", "Operator" or combination. For example: To print results for a 4-panel done by tbw on 12/25/09, select Date and Operator filters. Enter 12/25/09 for start and end dates for Date filter. Select \textit{tbw} from the drop down menu for operator filter.
   e. Click "Combined Filter Report".
   f. Click "File" then "Print". Choose appropriate printer. Reports for electronic transfer should be printed to "JusticeTrax Imaging".
   g. See Case File Images for further instruction

END OF DOCUMENT
I. Policy: The Dynex DSX instrument will be checked to ensure its reliability. Maintenance will be carried out if needed according to the procedures below.

A. Daily Maintenance: The following is performed each day the instrument is used for casework. (ISO/IEC 17025:2005 5.5.3, 5.5.5 c, g)
   1. Instrument Self Test
      a. The self test is performed before running any casework.
      b. The instrument automatically performs the self test when the Revelations software is started up.
      c. The instrument will display the results of the self test on the computer.
      d. The self test can be printed out (the self test consists of multiple pages which can be printed on one sheet of paper by selecting printing preferences - 4 pages per sheet).
      e. The analyst performing and or evaluating the self test will initial the log indicating the self test passed.
      f. Copies of the Self Test will be kept in an appropriate format (e.g. printouts may be maintained in the Dynex DSX Binder or electronic copies stored on the network or local computer). See Care and Maintenance of Equipment for further information about the maintenance log. (ISO/IEC 17025:2005 5.5.5 h)
   2. Daily Wash
      a. The Daily Wash may need to be performed if the instrument has not been used for an extended period of time.
      b. The Daily Wash is performed after the last run of casework for the day.
      c. See Dynex Operation for instructions.
      d. If samples are run overnight, the Daily Wash may be performed the next day, but should be performed before any additional work is done.
   3. Documentation
      a. Performing the self test and the daily wash will be noted in the Dynex (DSX) Binder. (ISO/IEC 17025:2005 5.5.5 h)

B. Weekly Maintenance: The following is performed at the end of the week (ISO/IEC 17025:2005 5.5.3)
   1. The maintenance is performed after all casework runs have finished for the week. If the instrument has not been used during the week, the maintenance is not required.
   2. Waste containers can be emptied as needed throughout the week.
   3. Empty and clean waste tip container.
      a. Some tips are used for biological samples, the contents of the waste tip container should be disposed of in biological waste.
      b. The tip container should be cleaned with an appropriate cleaner, rinsed thoroughly, and dried before returning to instrument.
      c. The waste tip chute that directs the tips into the container should also be cleaned.
   4. Empty and clean the liquid waste container
      a. The waste can be bleached and disposed of down the sink.
b. The container should be cleaned with an appropriate cleaner, rinsed thoroughly and returned to the instrument.

5. Empty and rinse the wash containers
   a. Each wash container should emptied and rinsed with DI water.
   b. The container should then be filled up with DI water and returned to instrument.

6. Clean external surfaces
   a. Wipe external surfaces with 70% isopropanol or similar solution.
   b. Wipe pipet tip with 70% isopropanol or similar solution.
   c. Any items moved during cleaning should be returned to their original positions.

7. Documentation
   a. Performance of the weekly maintenance will be noted in the Dynex Binder. (ISO/IEC 17025:2005 5.5.5 h)

C. Non-Routine Maintenance
   1. For non-routine maintenance and ordering parts, see the Dynex References. These references may be used for troubleshooting and maintenance procedures.
   2. Any additional maintenance will be noted in the Dynex Maintenance Binder. (ISO/IEC 17025:2005 5.5.5 h)

END OF DOCUMENT
I. The following is the procedure for entering results in LIMS.

A. Instructions for entering screening results in LIMS:

1. Open the case and right click on the appropriate request number. Select “Edit Findings”.

2. In the “Edit Findings” screen, select appropriate submission/subject.
   a. Additional results may be added to existing result sets, or a new result set can be created by right clicking the submission and selecting “Add Result”.
   b. Only one screen of an analyte name is allowed per result, if additional screens with the same analyte name are needed, an additional result set must be added.

3. Highlight (click on) the word “result” at the top of the window to enable editing of individual results at the bottom of the window.

4. Add the analytes for the screens performed. Choose a panel from the pull-down list at the top to add a predefined panel, or click the screen name to choose an appropriate screen. Multiple screens can be selected at once by shift-clicking or control-clicking in the list. Enter results.
   a. The default result is negative when the screen is added.
   b. Enter a positive result by changing the “Result” selector to the “Positive” radio button. The “Confirmation Required” checkbox will be automatically checked.
   c. A result can be marked as indeterminate by entering “1” in the ratio.
   d. A screen can appear only in the notes (not the report) by adding a “0” in the ratio.
      i. Screens such as “Instructions” and “Comment-Notes” automatically appear only in notes.
   e. The "Confirmation Required" checkbox controls how case results appear in LIMS reports used by lab staff to organize casework (regardless of the result entered).
      i. Cases with screens that have the confirmation box checked will appear on pending lists, cases with screens that do not have the confirmation box checked will not appear on pending lists.
      ii. If a positive screening result is not going to be confirmed by the lab, uncheck the confirmation box.

5. The analyst and date of analysis will also be recorded in the notes.
   a. The date of entry is the date of analysis unless otherwise indicated in the notes.
   b. “Screening Notes” can be used to provide information for multiple screens. The notes entered in the annotation field should indicate the analyst, date (if other than the date entered) and the screens it applies to.
   c. Alternatively the analyst and date (if other than the date entered) can be listed in the annotation portion of the individual screen.

6. If additional screening work is needed, an “Instruction” screen is entered.
   a. In the annotation field, enter the instruction (ie “screen benzo” or “OLA THC”) and analyst’s initials.
   b. The instruction should be marked as positive, the confirmation box must be checked.

B. Instructions for entering confirmation results in LIMS:

1. Open the case and right click on the appropriate request number. Select “Edit Findings”.

2. In the “Edit Findings” screen, select appropriate submission/subject.
   a. Results may be added to existing results by clicking the green "✚" (Add) button to the right, or a new result set can be created by right clicking the submission and selecting “Add Result”.
   b. Multiple instances of the same analyte can be entered in confirmation results.
3. Highlight the word “result” at the top of the window to enable editing of individual results at the bottom of the window.
4. Add the analytes for the confirmations performed. Enter results for each analyte.
   a. Negative results are entered as "-" in the quant. units field.
   b. Positive quantitative results are entered as the measured value.
      i. For blood samples, the number will appear on the report, as well as in the notes.
      ii. For urine samples, a “positive” will appear on the report and the number will appear in the notes.
   c. Positive qualitative results are entered as "+" in the quant. units field.
   d. For quantitative results include the units of the result (eg. mcg/ml).
      i. To enter a result as greater than the highest standard run, enter the value as "HIGH" in the quantity and “mcg/ml, >” in the units; this will appear on the report as a result of > 2.50 mcg/ml.
      ii. Entering the units as “inconclusive” will appear on the report as Inconclusive Result.
   e. For quantitative results, LIMS has default reporting limits that will print both in the notes and on the report.
      i. To override the default values, enter the new reporting limit in the +/- box as you want it to appear on the report, and enter the corresponding units.
   f. For both quantitative and qualitative results include the confirmation method (eg GCMS-SIM or GCMS-full).
      i. Entering the confirmation method as “Notes” will allow the entered result to appear only in the notes, not the report.
5. The analyst and date of analysis for the confirmation will also be recorded in the notes.
   a. The date of entry is the date of analysis unless otherwise indicated in the notes.
   b. “Extraction Notes” can be used to provide information for multiple analytes. The notes entered in the annotation field should indicate the analyst, date range and the analytes it applies to. “Extraction Notes” automatically appear in the notes only.
   c. Alternatively the analyst and date range can be listed in the annotation portion of the individual analyte.
6. If the entered results complete the analysis initiated by a screen or instruction, uncheck the confirmation box on the related screening analyte.
   a. If further analysis is required (eg a dilution or reanalysis), do not uncheck the confirmation box of the related screen. Add any comments needed to direct further analysis in the annotation box of the screen to(eg, reanalyze with 0.1 ml) and initial and date.
C. The LIMS report requires an entry in both the screening and confirmation sections, regardless of whether analysis was performed.
   1. In addition, there cannot be any pending screens (no "Confirmation Required" boxes can be checked) in order to draft complete the case.
   2. It is not required to open the evidence and itemize the contents when no work is done (eg. When agency cancels request prior to analysis). It should be recorded in the technical notes when the evidence submission was not opened or examined when a report is issued.
   3. If the screening is all negative, or no screens were confirmed, use the confirmation analyte “No confirmation done.”
   4. If no screening was done, use the “No screening done.” or “The sample was not screened on-site.” analyte in the screening section.
   5. If the sample was sent out for analysis (OLA):
a. The individual who imaged the report into LIMS will enter a “Comment-Notes” analyte in the confirmation section.
   i. the annotation should include the notes “imaged report”, the individual’s initials, and the date if other than the date entered.

b. An “OLA” analyte must also be added, which will appear on the report to indicate what the sample was analyzed for. Example “The sample was forwarded to NMS Labs for benzodiazepine analysis. Attached is the result of their examination.”.

6. Both the screening and confirmation sections have “Comment-Notes” and “Comment-report” analytes that can be used to convey information in the notes or the report, respectively.
   a. Comment-Notes will appear only in the notes.
   b. Comment-Report will appear in the report and notes, therefore initials and abbreviations should not be used.

D. The following supporting documentation related to the results is included in the case notes:
   1. A copy of the screening report for the individual case
   2. A copy of the GCMS worksheet with the case results
   3. A copy of the GCMS data for the case
      a. For quantitative procedures, this is a copy of the quantitation report for the case which includes chromatograms for internal standards and analytes.
      b. For qualitative procedures, this is a copy of the sample chromatogram compared to a standard and the mass spectrum of any positive analytes compared to a standard.

4. See the following for additional information regarding reports and images:
   a. GC/MS Using the Software-Comparative Identification
   b. GC/MS Using the Software-Quantitative Identification
   c. Case File Images

END OF DOCUMENT
I. The following procedures should be used for the preparation of calibrators for immunoassay analysis.

A. Universal safety precautions should be used when handling body fluids. Blood and Urine are bio hazardous substances capable of transmitting disease.

B. All Calibrators will be aliquotted into microcentrifuge tubes and put into the freezer for long term storage.

C. Blood Calibrators (Drugs of Abuse)

1. Blank Blood: Drug free whole blood must be obtained. The blood used should be blank whole blood. This can be obtained from a Blood Bank or from a company such as UTAK Laboratories.

2. Preparation: Calibrators may be prepared with combinations of any of the compounds listed below.

3. Expiration/Labeling: Blood calibrated solutions may be used for six months or until demonstrated unacceptable and should be labeled with the expiration information. See Lab Generated Solutions for more information regarding labeling calibrators and expiration dates.

4. Stock Standards: The following stock standards are used to prepare calibrators. Stock standards are typically 100 µg/mL; see respective blood confirmation procedures for preparation of stock standards.
   a. methamphetamine
   b. amphetamine
   c. morphine
   d. benzoylecgonine

5. Working Standard Solution: The 100 µg/mL stock standards are diluted 1:10 with deionized water to make 10 µg/mL working standards.

6. Target Concentrations: Below lists the desired concentration and volume information for each analyte
   a. High standard mix: The following are target concentrations and aliquot volumes to make 10 mL of high calibrator solution for the immunoassays:

<table>
<thead>
<tr>
<th>Analyte</th>
<th>Working Standard Concentration</th>
<th>Aliquot volume</th>
<th>Target concentration</th>
</tr>
</thead>
<tbody>
<tr>
<td>meth/amphetamine</td>
<td>10 µg/mL</td>
<td>80 µL</td>
<td>80 ng/mL</td>
</tr>
<tr>
<td>morphine</td>
<td>10 µg/mL</td>
<td>80 µL</td>
<td>80 ng/mL</td>
</tr>
<tr>
<td>benzoylcegonine</td>
<td>10 µg/mL</td>
<td>100 µL</td>
<td>100 ng/mL</td>
</tr>
</tbody>
</table>

   b. Cut off standard mix: The following are target concentrations and aliquot volumes to make 10 mL of cutoff calibrator solution for the immunoassays:

<table>
<thead>
<tr>
<th>Analyte</th>
<th>Working Standard Concentration</th>
<th>Aliquot volume</th>
<th>Target concentration</th>
</tr>
</thead>
<tbody>
<tr>
<td>meth/amphetamine</td>
<td>10 µg/mL</td>
<td>20 µL</td>
<td>20 ng/mL</td>
</tr>
<tr>
<td>morphine</td>
<td>10 µg/mL</td>
<td>20 µL</td>
<td>20 ng/mL</td>
</tr>
<tr>
<td>benzoylcegonine</td>
<td>10 µg/mL</td>
<td>50 µL</td>
<td>50 ng/mL</td>
</tr>
</tbody>
</table>
c. **Low standard mix:** The following are target concentrations and aliquot volumes to make 10 mL of low calibrator solution for the immunoassays:

<table>
<thead>
<tr>
<th>Analyte</th>
<th>Working Standard Concentration</th>
<th>Aliquot volume</th>
<th>Target concentration</th>
</tr>
</thead>
<tbody>
<tr>
<td>meth/amphetamine</td>
<td>10 µg/mL</td>
<td>5 µL</td>
<td>5 ng/mL</td>
</tr>
<tr>
<td>morphine</td>
<td>10 µg/mL</td>
<td>5 µL</td>
<td>5 ng/mL</td>
</tr>
<tr>
<td>benzoylecgonine</td>
<td>10 µg/mL</td>
<td>25 µL</td>
<td>25 ng/mL</td>
</tr>
</tbody>
</table>

7. **Preparation of calibrator solution:** Prepare the calibrator solution as described below.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Label three 10 mL volumetric flasks with the following: High, C/O, Low.</td>
</tr>
<tr>
<td>2</td>
<td>Add the appropriate aliquots of 10 µg/mL working standards. Refer to the charts above for the appropriate aliquot volume for the High, C/O, and Low calibrators.</td>
</tr>
<tr>
<td>3</td>
<td>Fill to mark with blank whole blood.</td>
</tr>
<tr>
<td>4</td>
<td>Mix all of the volumetrics by inversion for approximately 30 minutes. Transfer into a clean plastic or glass tube for dispensing. Aliquot approximately 0.5ml to microcentrifuge tubes for storage.</td>
</tr>
</tbody>
</table>

D. **Blood Calibrators (Benzodiazepines/Cannabinoids)**

1. **Blank Blood:** Drug free whole blood must be obtained. The blood used should be blank whole blood. This can be obtained from a Blood Bank or from a company such as UTAK Laboratories.

2. **Preparation:** Calibrators may be prepared with combinations of any of the compounds listed below.

3. **Expiration/Labeling:** Blood calibrator solutions may be used for six months or until demonstrated unacceptable and should be labeled with the expiration information. See Lab Generated Solutions for more information regarding labeling calibrators and expiration dates.

4. **Stock Standards:** The following stock standards are used to prepare calibrators. Stock standards are 10 µg/mL for COOH-THC and 100 µg/mL for oxazepam; see respective blood confirmation procedures for preparation of stock standards.

   a. oxazepam
   
   b. (-)11-nor-9-carboxy-delta9-tetrahydrocannabinol (COOH-THC)

5. **Working Standard:** Typically for COOH-THC, a 10 µg/mL stock standard is diluted 1:10 with deionized water to make 1 µg/mL working standards and for oxazepam a 100 µg/mL stock standard is diluted 1:10 with deionized water to make 10 µg/mL working standards.

6. **Target Concentrations:** Below lists the desired concentration and volume information for each analyte

   a. **High Standard Mix:** The following are target concentrations and aliquot volumes to make 10 mL of high calibrator solution for the immunoassays:

<table>
<thead>
<tr>
<th>Analyte</th>
<th>Working Standard concentration</th>
<th>Aliquot volume</th>
<th>Target concentration</th>
</tr>
</thead>
<tbody>
<tr>
<td>COOH-THC</td>
<td>1 µg/mL</td>
<td>400µL</td>
<td>40 ng/mL</td>
</tr>
<tr>
<td>oxazepam</td>
<td>10 µg/mL</td>
<td>200 µL</td>
<td>200 ng/mL</td>
</tr>
</tbody>
</table>

   b. **Cut off Standard Mix:** The following are target concentrations and aliquot volumes to make 10 mL of cut off calibrator solution for the immunoassays:
c. **Low Standard Mix:** The following are target concentrations and aliquot volumes to make 10 mL of low calibrator solution for the immunoassays:

<table>
<thead>
<tr>
<th>Analyte</th>
<th>Working Standard concentration</th>
<th>Aliquot volume</th>
<th>Target concentration</th>

<tr>
<td>COOH-THC</td>
<td>1 µg/mL</td>
<td>100 µL</td>
<td>10 ng/mL</td>
</tr>
<tr>
<td>oxazepam</td>
<td>10 µg/mL</td>
<td>25 µL</td>
<td>25 ng/mL</td>
</tr>
</tbody>
</table>

7. **Preparation of calibrator solution:** Prepare the calibrator solution as described below.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Label three 10 ml volumetric flasks with the following: High, C/O, and Low. Add approximately 1 mL water to each.</td>
</tr>
<tr>
<td>2</td>
<td>Add the appropriate aliquots of 10 µg/mL working standards. Refer to the charts above for the appropriate aliquot volume for the High, C/O, and Low calibrators.</td>
</tr>
<tr>
<td>3</td>
<td>Fill to the mark with blank blood.</td>
</tr>
<tr>
<td>4</td>
<td>Mix all of the volumetrics by inversion for approximately 30 minutes. Transfer into a clean plastic or glass tube for dispensing. Aliquot approximately 0.5ml to microcentrifuge tubes for storage.</td>
</tr>
</tbody>
</table>

E. **Urine Calibrators (Drugs of Abuse, Benzodiazepines and Cannabinoids)**

1. **Blank Urine:** Drug free urine must be obtained. Sodium fluoride is used as a preservative in urine specimens.
   a. Approximately 4 grams of sodium fluoride per 500 mL urine.

2. **Preparation:** Calibrators may be prepared with combinations of any of the compounds listed below.

3. **Expiration/Labeling:** Urine controls may be used for one year or until demonstrated unacceptable and should be labeled with the expiration information. See *Lab Generated Solutions* for more information regarding labeling calibrators and expiration dates.

4. **Stock Standards:** The following stock standards are used to prepare the urine calibrators. Stock standards are typically 100 µg/mL; see respective urine confirmation procedures for preparation of stock standard.
   a. methamphetamine
   b. amphetamine
   c. morphine
   d. benzoylecgonine
   e. oxazepam
   f. (-)11-nor-9-carboxy-delta9-tetrahydrocannabinol (COOH-THC)

5. **Working Standards:** The 100 µg/mL stock standards are diluted 1:10 with deionized water to make 10 µg/mL working standards.

6. **Target Concentrations:** Below lists the desired concentration and volume information for each analyte.
   a. **High Control:** The following are target concentrations and aliquot volumes to make 10 mL of high control solution for the immunoassays:
      | Analyte       | Working Standard Concentration | Aliquot volume | Target concentration |
      |---------------|--------------------------------|----------------|----------------------|
      | meth/amphetamine | 10 µg/mL                  | 1000 µL       | 1000 ng/mL          |
      | morphine      | 10 µg/mL                     | 600 µL        | 600 ng/mL           |
      | benzoylecgonine | 10 µg/mL                  | 600 µL        | 600 ng/mL           |
      | oxazepam      | 10 µg/mL                     | 600 µL        | 600 ng/mL           |
b. **Cut off Control:** The following are target concentrations and aliquot volumes to make 10 mL of cutoff calibrator solution for the immunoassays:

<table>
<thead>
<tr>
<th>Analyte</th>
<th>Working Standard Concentration</th>
<th>Aliquot volume</th>
<th>Target concentration</th>
</tr>
</thead>
<tbody>
<tr>
<td>meth/amphetamine</td>
<td>10 µg/mL</td>

<tr>
<td>4</td>
<td>Mix all of the volumetrics by inversion for approximately 30 minutes. Transfer into a clean plastic or glass tube for dispensing. Aliquot approximately 0.5ml to microcentrifuge tubes for storage.</td>
</tr>
</tbody>
</table>

END OF DOCUMENT
### Performing Extractions

**I. Policy: The following is general information about performing extractions.**

#### A. Identification of Cases Awaiting Confirmation

1. Refer to LIMS reports that identify cases awaiting confirmation(s).
   - a. The reports are sorted by analyte, screening results, and matrix.
   - b. The reports contain additional information, such as analyst comments, request date, and number of cases awaiting confirmation.

#### B. Barcode Scanning

1. Use of the Comparator Barcode Scanner provides documentation of the transfer of samples between vials.
2. Analysts must always visually verify the identifying information on the label of each sample when moving the contents from container to container when performing an extraction to maintain the sample integrity.
3. Scanning will occur at all vial to vial transfers. Due to physical constraints on equipment, scanning between SPE columns and vials will not be required.
   - a. Scanning can be with a 1D or 2D barcode.
4. See [TOX.65](#) for more information

#### C. Sampling Procedure: The following is the sampling procedure for extractions:

1. Homogeneity is assumed among multiple vials within an envelope or kits as long as the vials were collected sequentially, from a single event, into similar containers, and have similar volumes. The reported results pertain to the entire item (all vials), not just the tested amount or the vial analyzed.
2. Visually inspect the vials for any clotting or discoloration. The analyst should note any clotting or discoloration.
3. Bring the samples to room temperature before analysis.
4. Gently mix the blood vial to be analyzed before pipetting. This mixing assures homogeneity within the sample.
   - a. Typically samples are mixed for a minimum of 20 minutes.

#### D. The analyst may homogenize samples that cannot be pipetted due to clotting.

1. Any sample alteration or preparation should be documented in the notes.

#### E. When analyzing hospital vials, the analyst should attempt to analyze a vial (or vials) containing preservative and anticoagulant. The vial(s) selected will be indicated in the notes. It should be indicated in the notes if multiple vials are combined and used for analysis.

#### F. When Coroner's requests are received containing samples from multiple sources, the analyst shall look for instructions provided on Coroner's request and select the sample for analysis per the instructions.

#### G. If Coroner's instructions are not provided, the analyst shall choose the sample that has the least potential for postmortem redistribution and also consider the volume of sample available for testing.

1. For blood sample from multiple sources, the preferred order should peripheral blood over the heart blood. Chest cavity fluid should be the last option.
2. If the volume of the peripheral blood is small, screening may be done on the heart blood or the chest cavity fluid and the confirmation shall be done on the peripheral blood.
3. Blood shall be chosen over the urine sample as the former gives the acute load of the drug.
4. If situation presents itself that the above listed logical scheme of sample choices is not feasible then the analyst should stop work and contact the Coroner's office for direction.

H. Any deviations from the published method must be approved by the Supervisor/Manager.

I. Reporting Case Results

1. In order to report results for a case from an extraction, the standard and controls must meet the criteria specified in the procedure
   a. Each analyte can be evaluated independently, an issue with one analyte does not preclude reporting other analytes

2. The internal standard in the case sample must be present and meet the same requirements set in the method for standards
   a. This may include criteria for retention time, ion ratios, peak shape
   b. If the internal standard is not present or does not meet the requirements, no conclusion can be made about the target analyte

3. The target analyte in the case sample must meet the same requirements set in the method for the standards
   a. This may include criteria for retention time, ion ratios, peak shape
   b. If the value is below the reporting threshold specified in the method, the result is reported as not detected
   c. If the value is above the reporting threshold, the result may be reported as positive or as a quantitative value

4. If any criteria are not met, analyst must determine whether to perform further analysis, or report analyte as inconclusive or not detected
   a. Appropriate notes will be added to case notes and report as required.

J. Case Samples above the Quantitative Concentration Range:

1. There are instances in which a specific case sample must be diluted because its concentration is out of quantitative range of the standards used for that analysis.

2. The case sample can be diluted prior to the extraction by a known factor (for example: 10x dilution) to allow for that sample to fall within the quantitative range of the standards used in that analysis.
   a. When this occurs a multiplier (for example: multiplier = 10) should be used to calculate the concentration

3. Each sample should be evaluated on an individual basis. A decision will be made to either re-extract a smaller sample (greater dilution) or to report that the result is greater than the maximum standard value for which the linearity has been established for that particular extraction.

4. For diluted samples, the reporting limits of the standards will be adjusted based on the dilution factor used and reported appropriately.

K. Insufficient Sample Size:

1. When there is insufficient sample size for a particular analysis to be completed, an extraction may be completed with the existing smaller sample size (for example: 0.5 ml instead of 1 ml). In quantitative extractions, a multiplier should be used to calculate the sample concentration (for example: multiplier = 2). A notation will be made in the extraction notes for that sample. Reporting limits will be adjusted based on the dilution factor and reported appropriately.

2. In a case where the sample cannot be analyzed because the sample volume is insufficient, a notation will be placed in the report and notes. A notation will also be placed in the report and notes to indicate if the entire sample was consumed for analysis.

L. GC/MS Sample Dilutions:

1. In qualitative identifications (for example: amphetamine/methamphetamine urine extraction), the need may arise to dilute samples to achieve acceptable chromatography due to the high concentrations of a particular compound.

2. A portion of the extracted sample volume within the gas chromatograph vial insert can be diluted in the same solvent and re-injected along with a standard into the GC/MS. The presence of the internal standard and its appropriate mass spectra in the diluted sample is evidence that the sample dilution is sufficient to identify the compound.

M. Library Matches
1. The mass spectra of an "unknown" compound obtained from the full scan method can be searched against a commercial or user-supplied library. The results may yield a "match" with a numeric "fit".

2. Library matches should be reported as a screen or presumptive positive if no confirmation has been performed, or if the unknown has not been compared to a standard analyzed on the same instrumental method.

3. The analyst should consider the following before deciding to presumptively identify a substance:
   a. For a match to be considered positive, all of the major diagnostic ions in the reference spectrum must be present in the "unknown" and should be in the same relative ratios.
   b. Ions in the reference spectrum may be missing from the "unknown" due to low overall abundance.
   c. If additional ions are present in the unknown, it is suggested to try to determine if these "extra" ions may be due to another co-eluting substance, or "background" such as column bleed. Ion subtraction or background subtraction may be applicable.

N. GC/MS Settings

1. To ensure the highest quality analysis of each compound of interest is achieved, each Gas Chromatograph/Mass Selective Detector has settings which can be changed at the discretion of the Criminalist.

2. Some settings are considered alterable while others are more crucial to the integrity of the method being used. Settings must be changed prior to analysis; alterations must be applied to all of the standards, quality controls, and case samples being analyzed in a batch.

3. If settings are altered from the validated method parameters it must be documented; this may be accomplished by printing the method parameters and filing with the batch records for that run. See TOX.08 for more information.

4. The following are examples of settings that may be altered at the discretion of the Criminalist:
   a. The EM Voltage or Gain Factor
   b. The Injection Size
   c. The Dwell Time
   d. The Split Time & Flow for the inlet
   e. The Final Hold Time
   f. The Window Times for each compound of interest

5. When chromatography is unacceptable in the Selective Ion Monitoring (SIM) mode it may be necessary to run the sample in the Full Scan (FS) mode so as to identify/screen compounds of interest which were inconclusive in the SIM mode. Unacceptable chromatography can occur when a sample is in such high concentration that it overwhelms the Mass Selective Detector and produces poor chromatography in the SIM mode. The same sample may be re-injected in the full scan mode with a similar GC/MS temperature program method and compared to a standard for identification.

O. LCMS settings

A. Some settings are considered alterable while others are more crucial to the integrity of the method being used. Settings must be changed prior to analysis; alterations must be applied to all of the standards, quality controls, and case samples being analyzed in a batch.

B. If settings are altered from the validated method parameters it must be documented; this may be accomplished by printing the method parameters and filing with the batch records for that run. See TOX.08 for more information.

C. The following are examples of settings that may be altered at the discretion of the Criminalist:
   A. Gradient conditions or hold times after the compounds of interest have eluted
   B. Event times for each compound
   C. Injection volume
   D. Valve settings and times - controls when sample is sent to the MS and waste
   E. Initial hold time may be adjusted for changes in dwell time

P. Quality Log

1. Entries in the Toxicology Unit quality log will include, but are not limited to unsuccessful runs, removal of a standard from the calibration curve, or any other unexpected result.
2. An unsuccessful run is a run that was started, however no reportable results were obtained. The run may be unsuccessful for reasons including unacceptable performance of standards or QC's, unacceptable chromatography, instrument failure resulting in sequence termination or being unable to complete.

3. If there is a mechanical issue with the instrument, the mechanical issue should also be recorded in the instrument maintenance log, regardless of the ability to recover a run.

4. The exceptions include:
   a. If the run was re-started and concluded on the same instrument, it does not constitute an unsuccessful run.
   b. If the error is an operator error that can be remedied, it does not constitute an unsuccessful run.

END OF DOCUMENT
I. Title

AMPHETAMINE, METHAMPHETAMINE, MDA, AND MDMA IDENTIFICATION AND QUANTITATION IN BLOOD

A. Safety

SAFETY WARNING!

Ammonium hydroxide and hydrochloric acid are caustic reagents. Human blood is a biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items are required while using this procedure:

1. lab coat/protective clothing
2. protective gloves
3. safety hood sash down or use safety glasses
4. consult the Safety Data Sheets for more information

B. Principle

Amphetamine, Methamphetamine, MDA, and MDMA are recovered from blood by a liquid/liquid extraction procedure using Amphetamine-D11, Methamphetamine-D11, MDA-D5, and MDMA-D5 as internal standards. Identification and quantitation is by gas chromatography/mass spectrometry.

C. Specimen Requirement

One milliliter (1 ml) of sample is used for the analysis.

1. Smaller sample sizes may be used if necessary. Additional matrix is not required to make up the volume.

D. Detection Limit

The limit of detection for this procedure is 10 ng/ml for all analytes.

E. Quantitation Limit

The analytical limit of quantitation for this procedure is 20 ng/ml for both Amphetamine, Methamphetamine, MDA and MDMA.

The reporting limit of quantitation for this procedure is 20 ng/ml for both Amphetamine, Methamphetamine, MDA and MDMA.

F. Linear Range

The linear range has also been established from 20-2500 ng/ml for Amphetamine, Methamphetamine, MDA and MDMA.

G. Carryover

No significant carryover is present at 5,000 ng/ml for amphetamine and methamphetamine, MDA and MDMA. Carryover can occur at higher concentrations. Solvent blanks are run between each sample in a sequence to prevent carryover. If a sample has a concentration greater than 2500 ng/ml, the subsequent solvent blank will be checked. If carryover is detected in a solvent blank, the subsequent sample will be evaluated and reanalyzed if necessary.
H. Interference

Over the counter drugs, prescription drugs and drugs of abuse were evaluated for potential interference in the analysis of amphetamine, methamphetamine, MDA, MDMA.

1. Beta-phenethylamine can cause interference at the amphetamine qualifier ions. If a sample is known to have experienced a period of decomposition, it should not be analyzed by this method.

2. Ephedrine/pseudoephedrine elutes prior to methamphetamine. Concentrations greater than 10 µg/ml may interfere with the methamphetamine-D11 qualifier ion.

3. Propoxyphene can produce an artifact peak that elutes prior to MDMA. Concentrations greater than 5 µg/ml may interfere with MDMA-D5.

I. Equipment

This procedure uses the following laboratory equipment and supplies:

1. 15 ml (16 x 125 mm) disposable glass culture tubes with screw caps
2. 5 ml (13 x 100 mm) disposable glass tubes with teflon lined caps
3. volumetric flasks
4. plastic transfer pipettes
5. glass Pasteur pipettes
6. 2-20 µL pipettor and disposable pipette tips
7. 100-1000 µL pipettor and disposable pipette tips
8. 20-200 µL pipettor and disposable pipette tips
9. 500-2500 µL pipettor and disposable pipette tips
10. 500-5000 µL pipettor and disposable pipette tips
11. repeat pipettor and disposable tips (1.25 ml, 2.5 ml, 5 ml, 50 ml)
12. autosampler vials with volume reducing inserts and crimp caps
13. vortex mixer (Thermolyne or equivalent)
14. specimen rocker (LabQuake Shaker or equivalent)
15. centrifuge (IEC Centra-4B or equivalent)
16. evaporator/heating module
17. gas chromatograph/mass spectrometer

J. Chemicals

This procedure uses the following chemicals:

1. ammonium hydroxide, concentrate, reagent grade CAUTION IRRITANT
2. n-butyl chloride, spectroquality
3. methanol, reagent grade
4. pentafluoropropionic anhydride (PFPA)
5. hydrochloric acid, concentrate, reagent grade CAUTION IRRITANT
6. dry nitrogen gas (N₂)
7. ethyl acetate, reagent grade and HPLC grade

K. Standards

All standards, calibrators, and controls are prepared in appropriate volumetric flasks.

Directions and volumes used for preparation of calibrators are given for an assumed concentration (e.g. listed in catalog). The certified concentration, provided by the manufacturer on the certificate of analysis (COA), should be used in the preparation of solutions from an ampule. The volumes needed to achieve the final concentration of the calibrator
or control should be calculated using the certified concentration from the certificate, not an assumed concentration for the ampule.

1. **Stock standards:**

   Stock standards may be stored in freezer.
   a. stock internal standard: 10 µg/ml amphetamine-D11/methamphetamine-D11/MDA-D5/MDMA-D5 in methanol
      *Perform a 1:10 dilution of a 100 µg/ml solution. Example Prep: 1 ml of each 100 µg/ml ampule, dilute to 10 ml with methanol or 0.5 ml of ampule, dilute to 5 ml distilled water.*
   b. stock calibration standard: 1 mg/ml ampule
   c. stock QC standard: 1 mg/ml ampule

2. **Working standards:**

   a. working internal standard: 1 µg/ml amphetamine-D11/methamphetamine-D11/MDA-D5/MDMA-D5 in distilled water
      *Prepare a 1:10 dilution of stock internal standard. Example Prep: 1 ml of stock internal standard, dilute to 10 ml with distilled water or 0.5 ml stock internal standard, dilute to 5 ml distilled water*
   b. working calibration standard: 25 µg/ml amphetamine/methamphetamine/MDA/MDMA in distilled water
      *Prep: 0.625 ml of each 1 mg/ml ampule, dilute to 25 ml with distilled water*
   c. working QC standard: 50 µg/ml amphetamine/methamphetamine/MDA/MDMA in distilled water
      *Prep: 0.5 ml of each 1 mg/ml ampule, dilute to 10 ml with distilled water*

3. **Calibrators:** The calibrators used to establish the curve must be prepared at the below concentrations

   a. 0.020 µg/ml calibrator
      *Prep: 20 µL working calibration standard, dilute to 25 ml with blank blood*
   b. 0.750 µg/ml calibrator
      *Prep: 0.750 ml working calibration standard, dilute to 25 ml with blank blood*
   c. 1.500 µg/ml calibrator
      *Prep: 1.500 ml working calibration standard, dilute to 25 ml with blank blood*
   d. 2.500 µg/ml calibrator
      *Prep: 2.500 ml working calibration standard, dilute to 25 ml with blank blood*

4. **Controls:**

   a. Controls should be prepared throughout the concentration range from 0.06-2.0 µg/ml. It is recommended to prepare at least one concentration in the low, mid and high ranges.
      *For a concentration of 0.X µg/ml - Prep: 0.X ml working QC standard, dilute to 50 ml with blank blood*
   b. Example: 0.2 µg/ml QC
      *Prep: 0.200 ml working QC standard, dilute to 50 ml with blank blood*

      *Note: It is within the discretion of the Criminalist/Analyst to choose the concentration of the QC. However, when multiple QC samples are required, there must be at least two different concentrations and they should not have significant overlap in their ranges.*

5. **Calibrator/Control stability**

   a. Blood standards can be prepared ahead of time, dispensed into freezer vials, and stored in the freezer. Blood standards will be given an expiration date of 3 months from the date of preparation or based on the expiration date of the stock standards, whichever is earliest.

6. **Reagents**

   Reagents can be prepared before the extraction day.

   1. 1% hydrochloric acid in methanol
      *Prep: See Reagent Preparation*

7. **Extraction Procedure**

   The target drugs are extracted from the blood samples using the following procedure:

   1. Prepare and label disposable culture tubes for each calibrator, quality control, sample, and blank blood.
2. Turn on the heating block to 40°C.
3. Add 1.0 ml of calibrators, quality control, blank and samples to be analyzed into the corresponding labeled tube.
4. Add 300µl of working internal standard to each tube (note: the internal standard may be added before the calibrators, quality control, samples, and blank).
5. Add 300 µl of ammonium hydroxide to each tube.
6. Add 4.0 ml of n-butyl chloride to each tube.
7. Cap tubes and rock for 20 minutes. Centrifuge at 3000 rpm for 10-15 minutes. Repeat centrifuge step if necessary.
8. Transfer the n-butyl chloride (top) layer to labeled 5 ml disposable culture tubes.
9. Add 100µL of 1% HCl in methanol to each tube and vortex.
10. Evaporate the samples to dryness under a stream of N₂ at 40°C.
11. Allow the samples to cool to room temperature. Add 100 µl ethyl acetate and 50 µl PFPA to each tube. Cap with teflon lined caps and vortex.
13. Evaporate samples to dryness under a stream of N₂ at 40°C (about 5 minutes).
14. Reconstitute samples with 100 µl ethyl acetate.
15. Allow the samples to cool to room temperature. Transfer to labeled autosampler vials with volume reducing inserts. Cap vials.

N. GC/MS Analysis

Analyze the batch by GC/MS using the SIM program.

O. Method Parameters

Load the following method for this analysis:

1. methods: methsim.m (for amp and meth only)
   blmdmasm.m (amp/meth/mda/mdma)

<table>

P. Batch Analysis

Suggested order of analysis:

1. blank blood
2. LOQ
3. LOW
4. MED
5. HIGH
6. case samples
7. QC

If running more than ten case samples, an additional QC should be added for every ten additional case samples.
QC samples can bracket the case samples or be interspersed in the sequence.

Solvent wash and blanks: ethyl acetate, reagent grade

Q. Processed sample stability
   1. The extracted sample is stable for 5 days at room temperature.

R. Data Interpretation

In order for the quantitative values to be reported, the following quality control criteria should be met:

1. curve fit is linear with inverse concentration squared weighting, and “r^2” value of .96 or higher
   a. All four calibrators at the above listed concentrations must be used to establish the curve using a single replicate for each point
2. ion ratios within specified range +/- 20 (absolute)
3. standard and QC quantitation values within +/- 20% of known value
4. retention times +/- 3% of calibration standard retention times
5. sufficient peak shape and resolution
6. blank/negative control has a quantitative value less than LOQ

S. Qualitative Reporting

1. If any of the QC quantitative values is not within +/- 20% of known value, the sample may be reported qualitatively. To report a sample as positive (+) the calculated concentration from Chemstation for the sample must be greater than the run cutoff (lowest concentration standard). The following criteria must also be met:
   a. ion ratios within specified range +/- 20% (absolute)
   b. retention times +/- 3% of calibration standard retention times
   c. sufficient peak shape and resolution
   d. blank/negative control has a quantitative value less than lowest concentration standard

T. COMMENTS

Each lot of PFPA (Sigma) should be verified to check for any contaminants that may interfere with the ions selected for Methamphetamine analysis.

1. The PFPA is verified using an amount of Internal standard that is equivalent to the amount utilized in the sample extraction.
2. The verification can be done directly or by carrying the sample through the extraction procedure.
3. The lot is acceptable if the amount of 160 ion does not interfere with the LOQ standard.
4. The past historical data on the typical area counts obtained in a blank sample should be considered in the verification evaluation.

END OF DOCUMENT
I. COCAINE, BENZOYLECGONINE, CODEINE, MORPHINE IDENTIFICATION & QUANTITATION IN URINE

A. Safety - SAFETY WARNING!
   BSTFA with 1% TMS and methylene chloride are suspected human carcinogens. Ammonium hydroxide and hydrochloric acid are caustic reagents. Human urine is a biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items are required while using this procedure:
   1. lab coat/protective clothing
   2. protective gloves
   3. safety hood sash down or use safety glasses
   4. Safety Data Sheets for more information.

B. Principle
   Cocaine, Benzoylecgonine, Codeine, and Morphine are recovered from urine by a solid phase extraction procedure using Cocaine-D3, Benzoylecgonine-D3, Codeine-D3, and Morphine-D3 as internal standards. Identification and quantitation is by gas chromatography/mass spectrometry.

C. Specimen Requirement
   1. One milliliter (1 ml) of sample is used for the analysis.
      a. If a dilution is required based on screening results see TOX.41 - Performing Extractions.

D. Detection Limit
   1. The limit of detection for this procedure is 200 ng/ml for Cocaine, Benzoylecgonine, Codeine, and Morphine.

E. Quantitation Limit
   1. The analytical limit of quantitation for this procedure is 200 ng/ml for Cocaine, Benzoylecgonine, Codeine, and Morphine.
   2. The reporting limit of quantitation for this procedure is 200 ng/ml for Cocaine, Benzoylecgonine, Codeine, and Morphine.

F. Linear Range
   1. The linear range has been established from 200-5000 ng/ml for Cocaine and Benzoylecgonine, 200-1000 ng/ml for Codeine, and 200-3000 ng/ml for Morphine. (Range attempted: 50-5000 ng/ml for Cocaine, Benzoylecgonine, Codeine, and Morphine)

G. Carryover
   1. No significant carryover is present at 10,000 ng/ml.

H. Equipment
   This procedure uses the following laboratory equipment and supplies:
   1. 15 ml (16 x 125 mm) disposable glass culture tubes with screw caps
   2. 5 ml (13 x 100 mm) disposable glass tubes with teflon lined caps
   3. volumetric flasks
   4. plastic transfer pipettes
   5. 100-1000 µL pipettor and disposable pipette tips
6. 20-200 µL pipettor and disposable pipette tips
7. 500-5000 µL pipettor and disposable pipette tips
8. repeat pipettor and disposable tips (1.25 ml, 2.5 ml, 5 ml, 50 ml)
9. autosampler vials with volume reducing inserts and crimp caps
10. vortex mixer (Thermolyne or equivalent)
11. specimen rocker (LabQuake Shaker or equivalent)
12. centrifuge (IEC Centra-4B or equivalent)
13. solid phase extraction columns, Varian Bond Elut
14. solid phase extraction manifold (vac-elut)
15. evaporator/heating module
16. gas chromatograph/mass spectrometer

I. **Chemicals**

This procedure uses the following chemicals:

1. ammonium hydroxide, concentrate, reagent grade **CAUTION IRRITANT**
2. methylene chloride, reagent grade
3. methanol, reagent grade
4. isopropanol, reagent grade
5. sodium acetate
6. glacial acetic acid, reagent grade
7. bis(trimethylsilyl)trifluoroacetamide with 1% trimethylchlorosilane
8. hydrochloric acid, concentrate, reagent grade **CAUTION IRRITANT**
9. dry nitrogen gas (N₂)
10. ethyl acetate, reagent and HPLC grade
11. acetonitrile, HPLC grade

J. **Standards**

All standards, calibrators, and controls are prepared in appropriate volumetric flasks, utilizing calibrated pipettes. Directions and volumes used for preparation of calibrators are given for an assumed concentration (e.g. listed in catalog). The certified concentration, provided by the manufacturer on the certificate of analysis (COA), should be used in the preparation of solutions from an ampule. The volumes needed to achieve the final concentration of the calibrator or control should be calculated using the certified concentration from the certificate, not an assumed concentration for the ampule. Ampule concentrations may also change due to vendor availability or laboratory preference and a stock solution may not need to be prepared.

1. **Stock standards:** Stock standards may be stored in freezer.
      Prep: Draw 1ml of each 100 µg/ml ampule and dilute to 10 ml with methanol.
   b. stock calibration standard: 100 µg/ml cocaine in acetonitrile
      Prep: Draw 1 ml of the 1 mg/ml ampule cocaine standard, dilute to 10 ml with acetonitrile
   c. stock calibration standard: 100 µg/ml benzoylecgonine in methanol
      Prep: Draw 1 ml of the 1 mg/ml benzoylecgonine standard, dilute to 10 ml with methanol
   d. stock calibration standard: 100 µg/ml codeine in methanol
      Prep: Draw 1 ml of the 1 mg/ml codeine standard, dilute to 10 ml with methanol
   e. stock calibration standard: 100 µg/ml morphine in methanol
      Prep: Draw 1 ml of the 1 mg/ml morphine standard, dilute to 10 ml with methanol
   f. stock QC standard: 100 µg/ml cocaine in methanol
      Prep: Draw 1 ml of the 1 mg/ml cocaine standard, dilute to 10 ml with methanol
g. stock QC standard: 100 µg/ml benzoylecgonine in methanol
   Prep: Draw 1 ml of the 1 mg/ml benzoylecgonine standard, dilute to 10 ml with methanol

h. stock QC standard: 100 µg/ml codeine in methanol
   Prep: Draw 1 ml of the 1 mg/ml codeine standard, dilute to 10 ml with methanol

i. stock QC standard: 100 µg/ml morphine in methanol
   Prep: Draw 1 ml of the 1 mg/ml morphine standard, dilute to 10 ml with methanol

2. **Working standards:**
      Prep: 1 ml of each stock internal standard, dilute to 10 ml with distilled water
   b. working calibration standard: 10 µg/ml cocaine/benzoylecgonine in distilled water
      Prep: 1 ml of cocaine and benzoylecgonine stock calibration standard, dilute to 10 ml with distilled water
   c. working calibration standard: 10 µg/ml codeine/morphine in distilled water
      Prep: 1 ml of codeine and morphine stock calibration standard, dilute to 10 ml with distilled water
   d. working QC standard: 10 µg/ml cocaine/benzoylecgonine/codeine/morphine in distilled water
      Prep: 1 ml of each stock QC standard, dilute to 10 ml with distilled water

3. **Calibrators and Quality Controls:** Urine standards can be prepared ahead of time, dispensed into freezer vials, and stored in the freezer.
   a. 0.200 µg/ml Cocaine/Benzoylecgonine/Codeine/Morphine calibrator
      Prep: 200 µL cocaine/benzoylecgonine and 200 µL working codeine/morphine working calibration standard, dilute to 10 ml with human urine
   b. 0.500 µg/ml Cocaine/Benzoylecgonine/Codeine/Morphine calibrator
      Prep: 500 µL cocaine/benzoylecgonine and 500 µL working codeine/morphine working calibration standard, dilute to 10 ml with human urine
   c. 1.000 µg/ml Cocaine/Benzoylecgonine and 0.750 µg/ml Codeine/Morphine calibrator
      Prep: 1.0 ml working cocaine/benzoylecgonine and 750 µL working codeine/morphine calibration standard, dilute to 10 ml with human urine
   d. 5.000 µg/ml Cocaine/Benzoylecgonine and 1.000 µg/ml Codeine/Morphine calibrator
      Prep: 5.0 ml working cocaine/benzoylecgonine and 1.0 ml working codeine/morphine calibration standard, dilute to 10 ml with human urine
   e. low QC: 0.400 µg/ml
      Prep: 400 µL working QC standard, dilute to 10 ml with human urine
   f. high QC: 0.700 µg/ml
      Prep: 700 µL working QC standard, dilute to 10 ml with human urine

Note: It is within the discretion of the analyst to use a high or low QC. A high and a low QC is necessary when analyzing 11-20 case samples.

K. **Reagents**
   Reagents can be prepared before the extraction day. The elution solution must be made the day of analysis.
   1. sodium acetate buffer, pH 6.0
      Prep: See Reagent Preparation
   2. 0.1M hydrochloric acid in distilled water
      Prep: See Reagent Preparation
   3. elution solution (8:2) methylene chloride/isopropanol with 2% NH₄OH
      Prep: 20 ml isopropanol to a 100 ml volumetric flask and QS with methylene chloride. Invert flask several times to mix. Transfer solution to an appropriate sized container with cap or stopper. Remove 2 ml of the solution. Add 2 ml concentrated ammonium hydroxide. Cover and sonicate for 10-15 minutes.

L. **Extraction Procedure**
   The target drugs are extracted from the urine samples using the following procedure:
   1. Turn on the heating unit to 40°C.
   2. Prepare and label disposable culture tubes for each calibrator, quality control, sample, and blank urine.
   3. Add 1.0 ml of calibrators, quality control, blank and samples to be analyzed into the corresponding labeled tube.
4. Add 300 µl of working internal standard to each tube (note: the internal standard may be added before the calibrators, quality control, samples, and blank).

5. Add 6 ml pH 6.0 acetate buffer to each tube.

6. Cap, vortex (5-10 seconds), and centrifuge at 3000 rpm for 10-15 minutes.

7. Prepare the vac-elut by pouring dilute bleach solution into the bottom of the canister. Place the labeled solid phase extraction columns on vac-elut.

8. Rinse each column under vacuum of 1-2 mm Hg (It is important that the columns do not go dry prior to addition of the sample):
   a. 3.0 ml methanol (1x)
   b. 3.0 ml pH 6.0 acetate buffer (1x)

9. Turn off vacuum. Add sample to appropriately labeled column. Allow the samples to pass through the column at a rate of 1-2 ml/min or under gravity.

10. Prepare the elution solution.

11. Rinse each column under vacuum of 1-2 mm Hg
    a. 3.0 ml distilled water (1x)
    b. 3.0 ml 0.1 M HCl (1x)
    c. 6.0 ml methanol (1x), under vacuum 10-15 mm Hg

12. Dry columns under full vacuum (10-15 mm Hg) for 5 minutes. It is important that the columns are dry!

13. Remove the top of the vac-elut and wipe the solvent guide needles with a lint-free towel to remove any residual moisture. Be careful not to disturb any columns.

14. Rinse out the canister and dry. Place rack with labeled 5 ml culture tubes into vac-elut. Place the top back on vac-elut ensuring that the tubes are in collecting position.

15. Add 3 ml of the elution solution and allow the elution solvent to pass through the column without vacuum.

16. Evaporate the samples to dryness under a stream of N₂ at 40°C.

17. Remove tubes from the heating module and allow samples to cool to room temperature. Add 75 µL ethyl acetate and 75 µL BSTFA 1% TMS to each tube. Cap with teflon lined caps and vortex.

18. Cap tubes with teflon lined caps and vortex 5-10 seconds.

19. Heat at approximately 70°C for 30 minutes. Remove and cool to room temperature. Transfer to labeled autosampler vials with volume reducing inserts. Cap vials.

M. GC/MS Method and Parameters for Analysis

1. Analyze the batch by GC/MS using the SIM program.
   a. Method: URCOHESM.M

2. **Ions Monitored**
   - Cocaine D₃: 185, 275
   - Cocaine: 182, 272, 303
   - Benzoylecgonine D₃: 243, 259
   - Benzoylecgonine: 240, 256, 361
   - Codeine D₃: 181, 374
   - Codeine: 178, 371, 234
   - Morphine D₃: 239, 432
   - Morphine: 236, 429, 196

N. **Order of Batch Analysis:**

1. blank urine
2. LOQ
3. LOW
4. MED
5. HIGH
6. case samples
7. QC
   a. If analyzing more than ten case samples, an additional QC should be added for every ten additional case samples. For example: If analyzing 11-20 case samples, one QC can be placed prior to case samples and one placed after the samples.
   b. Solvent wash and blanks: ethyl acetate, reagent grade

O. Data Interpretation
   1. In order for the quantitative values to be reported, the following quality control criteria should be met:
      a. coefficient of determination, $r^2$, of .96 or higher using the following models:
         i. For Cocaine, curve fit is linear with equal weighting
         ii. For Benzoylecgonine, Morphine and Codeine, curve fit is quadratic with equal weighting
      b. ion ratios within specified range +/- 20% (absolute)
      c. standard and QC quantitation values within +/- 20% of known value
      d. retention times +/- 3% of calibration standard retention times
      e. sufficient peak shape and resolution
      f. blank/negative control has a quantitative value less than LOQ

P. Qualitative Reporting
   1. If any of the QC quantitative values are not within +/- 20% of known value, the sample may be reported qualitatively. To report a sample as positive (+) the calculated concentration from Chemstation for the sample must be greater than the cutoff (lowest concentration standard). The following criteria must also be met:
      a. ion ratios within specified range +/- 20% (absolute)
      b. retention times +/- 3% of calibration standard retention times
      c. sufficient peak shape and resolution
      d. blank/negative control has a quantitative value less than lowest concentration standard

I. HYDROCODONE IDENTIFICATION AND QUANTITATION IN URINE

A. Safety - SAFETY WARNING!
   Methylene chloride is a suspected human carcinogen. Ammonium hydroxide is a caustic reagent. Human urine is a
   biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items
   are required while using this procedure:
   1. lab coat/protective clothing
   2. protective gloves
   3. safety hood sash down or use safety glasses
   4. consult the Safety Data Sheets for more information

B. Principle
   Hydrocodone is recovered from urine by a solid phase extraction procedure using Hydrocodone-D3 as an internal
   standard. Identification and quantitation is by gas chromatography/mass spectrometry.

C. Specimen Requirement
   1. One milliliter (1 ml) of sample is used for the analysis.
      a. If a dilution is required based on screening results see TOX.41 - Performing Extractions.

D. Detection Limit
   1. The limit of detection for this procedure is 20 ng/ml for Hydrocodone.

E. Quantitation Limit
   1. The analytical limit of quantitation for this procedure is 50 ng/ml for Hydrocodone.
   2. The reporting limit of quantitation for this procedure is 50 ng/ml for Hydrocodone.

F. Linear Range
   1. The linear range has been established from 20-5000 ng/ml for Hydrocodone. (Range attempted: 20-5,000 ng/ml
      for Hydrocodone)

G. Carryover
   1. No significant carryover is present at 10,000 ng/ml.

H. Equipment
   This procedure uses the following laboratory equipment and supplies:
   1. 15 ml (16 x 125 mm) disposable glass culture tubes with screw caps
   2. 5 ml (13 x 100 mm) disposable glass tubes with Teflon lined caps
   3. volumetric flasks
   4. plastic transfer pipettes
   5. 100-1000 µL pipettor and disposable pipette tips
   6. 20-200 µL pipettor and disposable pipette tips
   7. 500-5000 µL pipettor and disposable pipette tips
   8. repeat pipettor and disposable tips (1.25 ml, 2.5 ml, 5 ml, 50 ml)
9. autosampler vials with volume reducing inserts and crimp caps
10. vortex mixer (Thermolyne or equivalent)
11. specimen rocker (LabQuake Shaker or equivalent)
12. centrifuge (IEC Centra-4B or equivalent)
13. solid phase extraction columns, Varian Bond Elute
14. solid phase extraction manifold (vac-elut)
15. evaporator/heating module
16. gas chromatograph/mass spectrometer

I. **Chemicals**
   This procedure uses the following chemicals:
   1. methanol, reagent grade
   2. sodium acetate
   3. glacial acetic acid, reagent grade
   4. acetone, reagent grade
   5. dry nitrogen gas (N₂)
   6. ammonium hydroxide, concentrate, reagent grade **CAUTION IRRITANT**
   7. methylene chloride, reagent grade
   8. isopropanol, reagent grade

J. **Standards**
   All standards, calibrators, and controls are prepared in appropriate volumetric flasks utilizing calibrated pipettes.
   Directions and volumes used for preparation of calibrators are given for an assumed concentration (e.g. listed in catalog). The certified concentration, provided by the manufacturer on the certificate of analysis (COA), should be used in the preparation of solutions from an ampule. The volumes needed to achieve the final concentration of the calibrator or control should be calculated using the certified concentration from the certificate, not an assumed concentration for the ampule. Ampule concentrations may also change due to vendor availability or laboratory preference and a stock solution may not need to be prepared.

1. **Stock standards**: Stock standards may be stored in freezer.
   a. stock internal standard: 10 µg/ml hydrocodone-D3 in methanol
      Prep: Draw 1 ml of 100 µg/ml ampule hydrocodone-D3 standard, dilute to 10 ml with methanol.
   b. stock calibration standard: 100 µg/ml hydrocodone in methanol
      Prep: Draw 1 ml of 1 mg/ml ampule hydrocodone standard, dilute to 10 ml with methanol
   c. stock QC standard: 100 µg/ml hydrocodone in methanol
      Prep: Draw 1 ml of 1 mg/ml hydrocodone standard, dilute to 10 ml with methanol

2. **Working standards**:
   a. working internal standard: 1 µg/ml hydrocodone-D3 in distilled water
      Prep: 1 ml of stock internal standard, dilute to 10 ml with distilled water
   b. working calibration standard: 10 µg/ml hydrocodone in distilled water
      Prep: 1 ml of stock calibration standard, dilute to 10 ml with distilled water
   c. working QC standard: 10 µg/ml hydrocodone in distilled water
      Prep: 1 ml of stock QC standard, dilute to 10 ml with distilled water

3. **Calibrators and Controls**: Urine standards can be prepared ahead of time, dispensed into freezer vials, and stored in the freezer.
   a. 0.050 µg/ml calibrator
      Prep: 50 µL working calibration standard, dilute to 10 ml with human urine
   b. 0.250 µg/ml calibrator
      Prep: 250 µL working calibration standard, dilute to 10 ml with human urine
c. 1.000 µg/ml calibrator  
*Prep: 1.00 ml working calibration standard, dilute to 10 ml with human urine*

d. 5.000 µg/ml calibrator  
*Prep: 5.00 ml working calibration standard, dilute to 10 ml with human urine*

e. 0.500 µg/ml QC  
*Prep: 500 µL working QC standard, dilute to 10 ml with human urine*

f. 2.000 µg/ml QC  
*Prep: 2.00 ml working QC standard, dilute to 10 ml with human urine*

Note: It is within the discretion of the analyst whether to use a high or low QC. A high and a low QC is necessary when analyzing 11-20 case samples.

K. **Reagents**  
Reagents can be prepared before the extraction day. The elution solution must be made the day of analysis.

1. sodium acetate buffer, pH 6.0  
   *Prep: See Reagent Preparation*

2. 0.1M acetate buffer, pH 4.0  
   *Prep: See Reagent Preparation*

3. elution solution (8:2) methylene chloride/isopropanol with 2% NH₄OH  
   *Prep: 20 ml isopropanol to a 100 ml volumetric flask and QS with methylene chloride. Invert flask several times to mix. Transfer solution to an appropriate sized container with cap or stopper. Remove 2 ml of the solution. Add 2 ml concentrated ammonium hydroxide. Cover and sonicate for 10-15 minutes.*

L. **Extraction Procedure**  
The target drugs are extracted from the urine samples using the following procedure:

1. Prepare and label disposable culture tubes for each calibrator, quality control, sample, and blank urine.

2. Turn on the heating block to 40°C.

3. Add 1.0 ml of calibrators, quality control, blank and samples to be analyzed into the corresponding labeled tube.

4. Add 300 µL of working internal standard to each tube (note: the internal standard may be added before the calibrators, quality control, samples, and blank).

5. Add 2.0 ml of pH 6.0 acetate buffer.

6. Cap tubes and vortex for 5-10 seconds.

7. Rotate the tubes for 15-20 minutes.

8. Centrifuge the tubes for 15 minutes at 2800-3000 rpm.

9. Prepare the vac-elut by pouring dilute bleach solution into the bottom of the canister. Place the solid phase extraction columns on the vac-elut.

10. Rinse each column under vacuum of 1-2 mm Hg (It is important that the columns do not go dry prior to addition of the sample):
   
   a. 3.0 ml of methanol (1x)
   
   b. 3.0 ml of distilled water (1x)
   
   c. 2.0 ml pH 6.0 acetate buffer (1x)

11. Turn off the vacuum. Add 2.0 ml of pH 6.0 acetate buffer in preparation of sample application.

12. Transfer the urine samples to the corresponding solid phase column. Allow the samples to pass through each column at rate of 1-2 ml/minute, preferably without vacuum.

13. Prepare the elution solution.

14. Rinse each column under vacuum of 1-2 mm Hg:
   
   a. 2.0 ml of distilled water (1x)
   
   b. 2.0 ml of acetate buffer pH 4.0 (1x)
   
   c. 3.0 ml methanol (1x), under a vacuum 10-15 mm Hg
15. Dry column at 10-15 mm Hg for 5 minutes.
16. Rinse out canister and dry. Place rack with labeled (13 x 100 mm) culture tubes into vac-elut. Place the top back on vac-elut ensuring that the tubes are in the collecting position.
17. Add 3.0 ml of the elution solution and allow to pass through the column without vacuum.
18. Evaporate the samples to dryness under a stream of N\textsubscript{2} at 40°C.
19. Remove the samples from the evaporator and allow the samples to cool to room temperature.
20. Add 100\textmu L of acetone to each tube and vortex for 5-10 seconds.

M. GC/MS Method and Parameters for Analysis

1. Analyze the batch by GC/MS using the SIM program.
   a. Method: HYDCDSIM.M

2. Ions Monitored
   Hydrocodone D3 302, 287
   Hydrocodone 299, 284, 270

N. Order of Batch Analysis:

1. blank urine
2. LOQ
3. LOW
4. MED
5. HIGH
6. case samples
7. QC
   a. If analyzing more than ten case samples, an additional QC should be added for every ten additional case samples. For example: If analyzing 11-20 case samples, one QC can be placed prior to case samples and one placed after the samples.
   b. Solvent wash and blanks: acetone, reagent grade

O. Data Interpretation

1. In order for the quantitative values to be reported, the following quality control criteria should be met:
   a. curve fit is quadratic with equal weighting, and \( r^2 \) value of .96 or higher
   b. ion ratios within specified range +/- 20% (absolute)
   c. standard and QC quantitation values within +/- 20% of known value
   d. retention times +/- 3% of calibration standard retention times
   e. sufficient peak shape and resolution
   f. blank/negative control has a quantitative value less than LOQ

P. Qualitative Reporting

1. If any of the QC quantitative values is not within +/- 20% of known value, the sample may be reported qualitatively. To report a sample as positive (+) the calculated concentration from Chemstation for the sample must be greater than the run cutoff (lowest concentration standard). The following criteria must also be met:
   a. ion ratios within specified range +/- 20% (absolute)
   b. retention times +/- 3% of calibration standard retention times
   c. sufficient peak shape and resolution
d. blank/negative control has a quantitative value less than lowest concentration standard

I. HYDROCODONE IDENTIFICATION AND QUANTITATION IN BLOOD

A. Safety - SAFETY WARNING!
   Methylene chloride is a suspected human carcinogen. Ammonium hydroxide is a caustic reagent. Human blood is a biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items are required while using this procedure:
   1. lab coat/protective clothing
   2. protective gloves
   3. safety hood sash down or use safety glasses
   4. consult the Safety Data Sheets for more information

B. Principle
   Hydrocodone is recovered from blood by a solid phase extraction procedure using Hydrocodone-D3 as an internal standard. Identification and quantitation is by gas chromatography/mass spectrometry.

C. Specimen Requirement
   1. Two milliliter (2 ml) of sample is used for the analysis.
      a. If a dilution is required based on screening results see TOX.41 - Performing Extractions.

D. Detection Limit
   1. The limit of detection for this procedure is 10 ng/ml.

E. Quantitation Limit
   1. The analytical limit of quantitation for this procedure is 20 ng/ml.
   2. The reporting limit of quantitation for this procedure is 20 ng/ml.

F. Linear Range
   1. The linear range has been established from 10-1,000 ng/ml. (Range attempted: 10-2,000 ng/ml)

G. Carryover
   1. No carryover is present at 2,000 ng/ml.

H. Equipment
   This procedure uses the following laboratory equipment and supplies:
   1. 15 ml (16 x 125 mm) disposable glass culture tubes with screw caps
   2. 5 ml (13 x 100 mm) disposable glass tubes with Teflon lined caps
   3. volumetric flasks
   4. plastic transfer pipettes
   5. 10-1000 µL pipettor and disposable pipette tips
   6. 100-1000 µL pipettor and disposable pipette tips
   7. repeat pipettor and disposable tips (2.5 ml, 5 ml, 50 ml)
   8. autosampler vials with volume reducing inserts and crimp caps
   9. vortex mixer (Thermolyne or equivalent)
10. specimen rocker (LabQuake Shaker or equivalent)
11. centrifuge (IEC Centra-4B or equivalent)
12. solid phase extraction columns, Varian Bond Elute
13. solid phase extraction manifold (vac-elut)
14. evaporator/heating module
15. gas chromatograph/mass spectrometer

I. **Chemicals**

This procedure uses the following chemicals:

1. methanol, reagent grade
2. sodium acetate
3. glacial acetic acid, reagent grade
4. acetone, reagent grade
5. dry nitrogen gas (N\(_2\))
6. zinc sulfate hydrate
7. ammonium hydroxide, concentrate, reagent grade  **CAUTION IRRITANT**
8. methylene chloride, reagent grade
9. isopropanol, reagent grade

J. **Standards**

All standards, calibrators, and controls are prepared in appropriate volumetric flasks, utilizing calibrated pipettes. Directions and volumes used for preparation of calibrators are given for an assumed concentration (e.g. listed in catalog). The certified concentration, provided by the manufacturer on the certificate of analysis (COA), should be used in the preparation of solutions from an ampule. The volumes needed to achieve the final concentration of the calibrator or control should be calculated using the certified concentration from the certificate, not an assumed concentration for the ampule. Ampule concentrations may also change due to vendor availability or laboratory preference and a stock solution may not need to be prepared.

1. **Stock standards**: Stock standards may be stored in freezer.
   a. stock internal standard: 10 µg/ml hydrocodone-D3 in methanol
      Prep: Draw 1ml of 100 µg/ml ampule hydrocodone-D3 standard, dilute to 10 ml with methanol.
   b. stock calibration standard: 100 µg/ml hydrocodone in methanol
      Prep: Draw 1 ml of 1 mg/ml hydrocodone standard, dilute to 10 ml with methanol
   c. stock QC standard: 100 µg/ml hydrocodone in methanol
      Prep: Draw 1 ml of 1 mg/ml hydrocodone standard, dilute to 10 ml with methanol

2. **Working standards**:
   a. working internal standard: 1 µg/ml hydrocodone-D3 in distilled water
      Prep: 1 ml of stock internal standard, dilute to 10 ml with distilled water
   b. working calibration standard: 10 µg/ml hydrocodone in distilled water
      Prep: 1 ml of stock calibration standard, dilute to 10 ml with distilled water
   c. working QC standard: 10 µg/ml hydrocodone in distilled water
      Prep: 1 ml of stock QC standard, dilute to 10 ml with distilled water

3. **Calibrators and Controls**: Blood standards can be prepared ahead of time, dispensed into freezer vials, and stored in the freezer.
   a. 0.020 µg/ml calibrator
      Prep: 20 µL working calibration standard, dilute to 10 ml with human blood
   b. 0.250 µg/ml calibrator
      Prep: 250 µL working calibration standard, dilute to 10 ml with human blood
   c. 0.750 µg/ml calibrator
      Prep: 750 µL working calibration standard, dilute to 10 ml with human blood
d. 1.000 µg/ml calibrator  
Prep: 1.0 ml working calibration standard, dilute to 10 ml with human blood

e. 0.200 µg/ml QC  
Prep: 200 µL working QC standard, dilute to 10 ml with human blood

f. 0.600 µg/ml QC  
Prep: 600 µL working QC standard, dilute to 10 ml with human blood

Note: It is within the discretion of the analyst to use a high or low QC. However, a high and low QC is necessary when analyzing a large batch of case samples.

K. Reagents
Reagents can be prepared before the extraction day. The elution solution must be made the day of analysis.

1. sodium acetate buffer, pH 6.0  
   Prep: See Reagent Preparation

2. 0.1M acetate buffer, pH 4.0  
   Prep: See Reagent Preparation

3. 5% zinc sulfate in 50% methanol  
   Prep: See Reagent Preparation

4. elution solution (8:2) methylene chloride/isopropanol with 2% NH₄OH  
   Prep: 20 ml isopropanol to a 100 ml volumetric flask and QS with methylene chloride. Invert flask several times to mix. Transfer solution to an appropriate sized container with cap or stopper. Remove 2 ml of the solution. Add 2 ml concentrated ammonium hydroxide. Cover and sonicate for 10-15 minutes.

L. Extraction Procedure
The target drugs are extracted from the urine samples using the following procedure:

1. Prepare and label disposable culture tubes for each calibrator, quality control, sample, and blank blood.

2. Turn on the heating block to 40°C.

3. Add 2.0 ml of calibrators, quality control, blank and samples to be analyzed into the corresponding labeled tube.

4. Add 300 µL of working internal standard to each tube (note: the internal standard may be added before the calibrators, quality control, samples, and blank).

5. Add 4.0 ml of the 5% zinc sulfate in 50% methanol solution.

6. Cap each tube and shake the tubes vigorously to break up any blood clots.

7. Vortex 5-10 seconds.

8. Rotate the tubes for 15-20 minutes.

9. Centrifuge the tubes for 15 minutes at 2800-3000 rpm.

10. Place the solid phase extraction columns on the vac-elut.

11. Rinse each column under vacuum of 1-2 mm Hg (It is important that the columns do not go dry prior to addition of the sample):
   a. 3.0 ml of methanol (1x)
   b. 3.0 ml of distilled water (1x)
   c. 2.0 ml pH 6.0 acetate buffer (1x)

12. Turn off the vacuum. Add 2.0 ml of pH 6.0 acetate buffer in preparation of sample application.

13. Transfer the zinc sulfate solution from each tube to the corresponding solid phase column. Allow the samples to pass through each column at rate of 1-2 ml/minute (6-12 minutes), preferably without vacuum.

14. Prepare the elution solution. Rinse each column under vacuum of 1-2 mm Hg:
   a. 2.0 ml of distilled water (1x)
   b. 2.0 ml of acetate buffer pH 4.0 (1x)
   c. 3.0 ml methanol (1x) under a vacuum 10-15mmHg

15. Dry column at 10-15 mm Hg for 5 minutes.
16. Rinse out canister and dry. Place rack with labeled (13 x 100 mm) culture tubes into vac-elut. Place the top back on vac-elut ensuring that the tubes are in the collecting position.

17. Add 3.0 ml of the elution solution and allow to pass through the column without vacuum.

18. Evaporate the samples to dryness under a stream of N₂ at 40°C.

19. Remove the samples from the evaporator and allow the samples to cool to room temperature.

20. Add 100µL of acetone to each tube and vortex for 5-10 seconds.

M. GC/MS Method and Parameters for Analysis

1. Analyze the batch by GC/MS using the SIM program.
   a. Method: HYDCDBLD.m

2. Ions Monitored
   - Hydrocodone D₃ 302, 287
   - Hydrocodone 299, 284, 270

N. Order of Batch Analysis

1. blank blood
2. LOQ
3. LOW
4. MED
5. HIGH
6. case samples
7. QC
   a. If analyzing more than ten case samples, an additional QC should be added for every ten additional case samples. For example: If analyzing 11-20 case samples, one QC can be placed prior to case samples and one placed after the samples
   b. Solvent wash and blanks: acetone, reagent grade

O. Data Interpretation

1. In order for the quantitative values to be reported, the following quality control criteria should be met:
   a. curve fit is linear with equal weighting, with "r²" value of .96 or higher
   b. ion ratios within specified range +/- 20% (absolute)
   c. standard and QC quantitation values within +/- 20% of known value
   d. retention times +/- 3% of calibration standard retention times
   e. sufficient peak shape and resolution
   f. blank/negative control has a quantitative value less than LOQ

P. Qualitative Reporting

1. If any of the QC quantitative values is not within +/- 20% of known value, the sample may be reported qualitatively. To report a sample as positive (+) the calculated concentration from Chemstation for the sample must be greater than the run cutoff (lowest concentration standard). The following criteria must also be met:
   a. ion ratios within specified range +/- 20% (absolute)
   b. retention times +/- 3% of calibration standard retention times
   c. sufficient peak shape and resolution
   d. blank/negative control has a quantitative value less than lowest concentration standard

END OF DOCUMENT
I. AMPHETAMINE and METHAMPHETAMINE IDENTIFICATION IN URINE

A. Safety - SAFETY WARNING!
   Ammonium hydroxide is a caustic reagent. Sulfuric acid is a corrosive reagent. Human urine is a biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items are required while using this procedure:
   1. lab coat/protective clothing
   2. protective gloves
   3. safety hood sash down or use safety glasses
   4. Safety Data Safety Sheets for more information.

B. Principle
   Amphetamine and Methamphetamine are recovered from urine by a liquid/liquid extraction procedure using phentermine as internal standards. Identification is by gas chromatography/mass spectrometry.

C. Specimen Requirement
   1. Two milliliters (2 ml) of sample is used for the analysis.
      a. If a dilution is required based on screening results see TOX.41 - Performing Extractions.

D. Detection Limit
   1. The low standard for this procedure is 2.0 µg/ml for Amphetamine and Methamphetamine. The limit of detection for this procedure can be as low as or lower than 0.5 µg/ml for Amphetamine and Methamphetamine.

E. Equipment
   This procedure uses the following laboratory equipment and supplies:
   1. 15 ml (16 x 125 mm) disposable glass culture tubes with screw caps
   2. 5 ml disposable conical, centrifuge tubes with snap caps
   3. volumetric flasks
   4. glass Pasteur pipettes
   5. 10-1000 µL pipettor and disposable pipette tips
   6. 500-2500 µL pipettor and disposable pipette tips
   7. repeat pipettor and disposable tips (5 ml, 50 ml)
   8. pH indicator strips
   9. autosampler vials with volume reducing inserts and crimp caps
   10. vortex mixer (Thermolyne or equivalent)
   11. specimen rocker (LabQuake Shaker or equivalent)
   12. centrifuge (IEC Centra-4B or equivalent)
   13. balance (mg)
   14. gas chromatograph/mass spectrometer
F. Chemicals
This procedure uses the following chemicals:
1. ammonium hydroxide, concentrate CAUTION IRRITANT
2. n-butyl chloride, spectroquality
3. chloroform, reagent grade
4. sulfuric acid, reagent grade CAUTION CORROSIVE

G. Standards
Directions and volumes used for preparation of calibrators are given for an assumed concentration (e.g. listed in catalog). The certified concentration, provided by the manufacturer on the certificate of analysis (COA), should be used in the preparation of solutions from an ampule. The volumes needed to achieve the final concentration of the calibrator or control should be calculated using the certified concentration from the certificate, not an assumed concentration for the ampule. Ampule concentrations may also change due to vendor availability or laboratory preference and a stock solution may not need to be prepared.

1. Stock Solutions:
Stock solutions may be stored in the refrigerator.
   a. stock internal standard: 70 µg/ml Phentermine in distilled water
      Prep: 43.5 mg Phentermine HCl standard, dilute to 500 ml with distilled water
   b. stock standard: Amphetamine and Methamphetamine ampules

2. Working Solutions:
   a. working standard: 100.0 µg/ml amphetamine/methamphetamine in urine
      Prep: 1 mg/ml ampule each Amphetamine and Methamphetamine, dilute with urine to 10 ml
   b. Resolution Solution (RS): Suggested analytes: β-Phenethylamine, Amphetamine, Phentermine, Methamphetamine, Mephenetermine, Phenylpropanolamine, Pseudoephedrine, Methyleneedioxyamphetamine, Methylene dioxy methamphetamine
      Prep: One toothpick full of each standard (powder form) in separately labeled 15 ml disposable screw top culture tubes, add approximately 2 ml distilled water to dissolve the standard. Add approximately 250 µl of concentrated ammonium hydroxide to each tube and vortex 5-10 seconds. Add 2 ml chloroform to each tube, cap and vortex 1 minute. Centrifuge at 3000 rpm for 5 minutes and remove 0.500 ml of chloroform (bottom) layer to a 20 ml screw cap vial. Allow solution to equilibrate. Test on GC/MS and adjust accordingly to attain good resolution. (May need to add more of the chloroform extract for a particular analyte or dilute mix with neat chloroform).

3. Standards:
   a. 75.0 µg/ml standard
      Prep: 7.5 ml 100.0 µg/ml calibrator, dilute with urine to 10 ml
   b. 10.0 µg/ml standard
      Prep: 1.0 ml 100.0 µg/ml calibrator, dilute with urine to 10 ml
   c. 2.0 µg/ml standard
      Prep: 0.2 ml 100.0 µg/ml calibrator, dilute with urine to 10 ml

H. Reagents
Reagents may be prepared before the extraction day.
1. 1.0 N Sulfuric Acid
   Prep: See Reagent Preparation

I. Extraction Procedure
The target drugs are extracted from the urine samples using the following procedure:

1. Prepare and label 15 ml disposable screw top glass culture tubes for each calibrator, quality control, sample, and blank urine.
2. Add 2.0 ml of calibrators, quality control, blank and samples to be analyzed into the corresponding labeled tube.
3. Add 200 µL of stock internal standard to each tube (note: the internal standard may be added before the calibrators, quality control, samples, and blank).
4. Add 400 µL of ammonium hydroxide to each tube.
5. Add 4 ml of n-butyl chloride to each tube.
7. Transfer the n-butyl chloride (top) layer to labeled disposable culture tubes.
8. Add 3.0 ml of 1.0 N sulfuric acid to each tube. Cap tubes and rock for 20 minutes. Centrifuge at 3000 rpm for 10-15 minutes.
9. Transfer the acid (bottom) layer to labeled disposable snap cap conical centrifuge tubes.
10. Add 500 µL of concentrated ammonium hydroxide to each tube. Add 300 µL of chloroform to each tube. Cap tubes and vortex for 1 minute.
11. Centrifuge tubes at 3000 rpm for 5 minutes.
12. Transfer 150 µL of the chloroform (bottom) layer to labeled autosampler vials with volume reducing inserts. Cap vials.

J. GC/MS Method and Parameters for Analysis

1. Analyze the batch by GC/MS using the FULLSCAN program.
   a. Method: AMPFULL.M

K. Order of Batch Analysis:

1. Blank urine
2. LOW
3. MED
4. HIGH
5. case samples
6. Resolution Solution Standard
   a. Solvent wash and blanks: chloroform, reagent grade

L. Data Analysis

The following quality control criteria should be met for a qualitative identification:

1. Before comparing an unknown sample to a reference standard the following criteria must be met (rejection of data criteria before comparison with a standard):
   a. Sufficient peak shape (symmetrical) and resolution (baseline) of the unknown peaks
   b. There should be sufficient mass fragments for comparison and identification without saturating the detector. Sample may be adjusted by dilution or concentration to achieve these results.
   c. Internal standard is present in both the blank and unknown
   d. Blanks must not include the drug(s) of interest.
2. For comparison of the unknown sample to a known reference material (standard):
   a. The mass spectrum of the sample overall should match the mass spectrum of the reference standard (base ion and other prominent ions).
   b. The overall fragmentation pattern and relative ratios of the ions are compared for consistency.
   c. There should not be any major differences or additional prominent ions that are not explained or noted.
   d. The following ions should be present on chromatograms for an identification:
      i. Amphetamine Ion 134
      ii. Phentermine Ion 146
      iii. Methamphetamine Ion 148
   e. The retention time of the sample and the standard is within +/-5%
   f. Sufficient peak shape and resolution
3. For the Resolution Solution (RS):
   a. all peaks have sufficient peak shape and resolution
   b. all peaks resolve from each other
c. When the RS is used to identify a compound, ions in each compound should be present
   i. Beta-Phenethylamine: Ion - 65, 91, 121
   ii. Amphetamine: Ion - 44, 65, 91 134
   iii. Phentermine: Ion - 58, 91, 146
   iv. Methamphetamine: Ion - 58, 91, 148
   v. Mephentermine: Ion - 72, 91, 148, 160
   vi. Phenylpropanolamine: Ion - 44, 77, 132
   vii. Pseudoephedrine: Ion - 58, 77, 146, 160
   viii. MDA: Ion - 44, 77, 136, 179
   ix. MDMA: Ion - 58, 77, 135, 193

M. Identification

1. Identification of amphetamine and/or methamphetamine will be performed by comparison to an extracted standard in the run. The analyst may choose the standard used for comparison.

2. Identification of other compounds in the sample (eg. MDMA) may be performed by comparison to the Resolution Solution (RS) in the run.

END OF DOCUMENT
I. CARBOXY-THC IDENTIFICATION AND QUANTITATION IN URINE

A. Safety - SAFETY WARNING!
   Bis(trimethylsilyl)trifluoroacetamide (BSTFA) with 1% TMCS and is a suspected human carcinogen. Sodium hydroxide and hydrochloric acid are caustic reagents. Human urine is a biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items are required while using this procedure:
   1. lab coat/protective clothing
   2. protective gloves
   3. safety hood sash down or use safety glasses
   4. Safety Data Sheets for more information.

B. Principle
   Carboxy-THC is recovered from urine by a solid phase extraction procedure using Carboxy-THC-D3 as the internal standard. Identification and quantitation is by gas chromatography/mass spectrometry.

C. Specimen Requirement
   1. Five milliliters (5 ml) of sample is used for the analysis.
      a. If a dilution is required based on screening results see TOX.41 - Performing Extractions.

D. Detection Limit
   1. The limit of detection for this procedure is 10 ng/ml for Carboxy-THC.

E. Quantitation Limit
   1. The analytical limit of quantitation for this procedure is 20 ng/ml for Carboxy-THC.
   2. The reporting limit of quantitation for this procedure is 20 ng/ml for Carboxy-THC.

F. Linear Range
   1. The linear range has been established from 20-2,000 ng/ml for Carboxy-THC. (Range attempted: 10-3,000 ng/ml)

G. Carryover
   1. No carryover is present at 10,000 ng/ml.

H. Equipment
   This procedure uses the following laboratory equipment and supplies:
   1. 8 ml (13 x 100 mm) disposable glass tubes with teflon lined caps
   2. volumetric flasks
   3. plastic transfer pipettes
   4. glass Pasteur pipettes
   5. 2-20 µL pipettor and disposable pipette tips
   6. 100-1000 µL pipettor and disposable pipette tips
   7. 20-200 µL pipettor and disposable pipette tips
   8. 500-2500 µL pipettor and disposable pipette tips
9. 500-5000 µL pipettor and disposable pipette tips
10. repeat pipettor and disposable tips (1.25 ml, 2.5 ml, 5 ml, 50 ml)
11. autosampler vials with volume reducing inserts and crimp caps
12. vortex mixer (Thermolyne or equivalent)
13. specimen rocker (LabQuake Shaker or equivalent)
14. centrifuge (IEC Centra-4B or equivalent)
15. solid phase extraction columns, UCT Clean Screen (ZSTHC020)
16. solid phase extraction manifold (vac-elut)
17. evaporator/heating module
18. gas chromatograph/mass spectrometer

I. Chemicals
This procedure uses the following chemicals:
1. sodium hydroxide, concentrate, reagent grade CAUTION IRRITANT
2. hexane, reagent grade
3. methanol, reagent grade
4. acetonitrile, reagent grade
5. sodium acetate
6. glacial acetic acid, reagent grade
7. bis(trimethylsilyl)trifluoroacetamide (BSTFA) with 1% trimethylchlorosilane
8. hydrochloric acid, concentrate, reagent grade CAUTION IRRITANT
9. dry nitrogen gas (N₂)
10. ethyl acetate, HPLC grade

J. Standards
All standards, calibrators, and controls are prepared in appropriate volumetric flasks, utilizing calibrated pipettes. Directions and volumes used for preparation of calibrators are given for an assumed concentration (e.g. listed in catalog). The certified concentration, provided by the manufacturer on the certificate of analysis (COA), should be used in the preparation of solutions from an ampule. The volumes needed to achieve the final concentration of the calibrator or control should be calculated using the certified concentration from the certificate, not an assumed concentration for the ampule. Ampule concentrations may also change due to vendor availability or laboratory preference and a stock solution may not need to be prepared.
1. Stock standards: Stock standards may be stored in the freezer.
   a. stock internal standard: 10 µg/ml Carboxy-THC D3 in methanol
      Prep: Draw 1ml 100 µg/ml ampule Carboxy-THC D3 standard dilute to 10 ml with methanol.
   b. stock glucuronide: 10 mg/ml Carboxy-THC-glucuronide
      Prep: Draw 1 ml of 100 µg/ml ampule Carboxy-THC glucuronide, dilute to 10 ml with distilled water.
2. Working standards:
   a. working internal standard: 1.0 µg/ml Carboxy-THC D3 in distilled water
      Prep: Draw 1 ml of stock internal standard, dilute to 10 ml with distilled water
   b. working calibration standard: 10 µg/ml Carboxy-THC in distilled water
      Prep: Draw 1 ml of 100 µg/ml ampule Carboxy-THC standard, dilute to 10 ml with distilled water.
   c. working QC standard: 10 µg/ml Carboxy-THC in distilled water
      Prep: Draw 1 ml of 100 µg/ml ampule Carboxy-THC standard, dilute to 10 ml with distilled water.
3. Calibrators and Quality Controls:
   a. 0.020 µg/ml calibrator
      Prep: 20 µL working calibration standard, dilute to 10 ml with human urine
b. 0.250 µg/ml calibrator  
*Prep*: 250 µL working calibration standard, dilute to 10 ml with human urine

c. 0.750 µg/ml calibrator  
*Prep*: 750 µL working calibration standard, dilute to 10 ml with human urine

d. 1.000 µg/ml calibrator  
*Prep*: 1.0 ml working calibration standard, dilute to 10 ml with human urine

e. low QC: 0.200 µg/ml  
*Prep*: 200 µL working QC standard, dilute to 10 ml with human urine

f. high QC: 0.600 µg/ml  
*Prep*: 600 µL working QC standard, dilute to 10 ml with human urine

g. low glucuronide QC: 0.200 Carboxy-THC (0.302 µg/ml glucuronide)  
*Prep*: 302 µL stock glucuronide, dilute to 10 ml with human urine

h. high glucuronide QC: 0.600 Carboxy-THC (0.906 µg/ml glucuronide)  
*Prep*: 906 µL stock glucuronide, dilute to 10 ml with human urine

Note: It is within the discretion of the analyst whether to use a high or low QC. A high and a low QC is necessary when analyzing 11-20 case samples.

K. Reagents
Reagents can be prepared before the extraction day. The elution solution and column rinse solution must be made the day of analysis.

1. 10 N sodium hydroxide  
*Prep*: See Reagent Preparation

2. 0.1M hydrochloric acid in distilled water.  
*Prep*: See Reagent Preparation

3. (10:1) glacial acetic acid/ concentrated hydrochloric acid  
*Prep*: See Reagent Preparation

4. column rinse solution (70:30) 0.1M hydrochloric acid/ acetonitrile  
*Prep*: 15 ml acetonitrile added to 35 ml of 0.1M hydrochloric acid in a 50 ml graduated cylinder.

5. elution solution (70:30) hexane/ ethyl acetate  
*Prep*: 30 ml ethyl acetate to a 100 ml volumetric flask and QS with hexane. Cover and sonicate for 10 minutes.

L. Extraction Procedure
The target drug is extracted from the urine samples using the following procedure:

1. Turn on heating block to 60 °C and use appropriate blocks for 15ml tubes

2. Prepare and label disposable 15 ml (16 x 100) culture tubes for each calibrator, quality control, sample, and blank urine.

3. Add 5.0 ml of calibrators, quality control, blank, and samples to be analyzed into the corresponding labeled tube.

4. Add 200 µL of 10 N sodium hydroxide. Cap and vortex for 10 to 15 seconds.

5. Hydrolyze blank, glucuronide QC, and case samples at 60 °C for 30 minutes. **DO NOT HYDROLYZE STANDARDS AND non-glucuronide QC**.

6. Add 200 µL working internal standard to each tube

7. Cool to room temperature and adjust pH with glacial acetic acid/ concentrated hydrochloric acid (10:1). Add 1.5 ml and then adjust pH to 2.0 - 3.0.

8. Cap each tube and vortex for approximately 10 seconds.

9. Rotate the tubes for approximately 5 minutes.

10. Centrifuge at 2800-3000 rpm for 5 minutes.

11. Label and place the solid phase extraction columns on the vac-elut.(UCT column# ZSTHC020)

12. Rinse each column under vacuum of 1-2 mm Hg (*It is important that the columns do not go dry prior to addition of the sample*):

   a. 3.0 ml of methanol (1x)
b. 3.0 ml of DI H$_2$O (1x)

c. 1.0 ml of 0.1 M hydrochloric acid (1x)

13. Turn off the vacuum. Add 1.0 ml 0.1 M hydrochloric acid in preparation of sample application.

14. Transfer the centrifuged samples to the corresponding solid phase column. Allow the samples to pass through each column at a rate of 1-2 ml/ minute (6-12 minutes), preferably without vacuum.

15. Prepare the elution solution.

16. Rinse each column under vacuum of 1-2 mm Hg:
   a. 3.0 ml of distilled water (1x)
   b. 2.0 ml 0.1 M hydrochloric acid/ acetonitrile (70:30) (1x)

17. Dry columns under full vacuum (10-15 mm Hg) for 3 minutes.

18. Rinse with 250 µL hexane; DO NOT use excessive hexane.

19. Remove the top of the vac-elut and set aside. Be careful not to disturb any columns.

20. Rinse out the canister and dry. Place rack with labeled 8 ml culture tubes into vac-elut. Place the top back on vac-elut ensuring that the tubes are in the collecting position.

21. Add 3 ml of the elution solution and allow the elution solvent to pass through the column without vacuum.

22. Evaporate the samples to dryness under a stream of N$_2$ at 40°C.

23. Remove tubes from the heating module and allow samples to cool to room temperature. Add 75 µL ethyl acetate and 75 µL BSTFA 1% TMCS to each tube.

24. Cap tubes with Teflon lined caps and vortex 10 seconds.

25. Heat at approximately 70°C for 30 minutes. Remove and cool to room temperature. Transfer to labeled autosampler vials with volume reducing inserts. Cap vials.

M. GC/MS Method and Parameters for Analysis

1. Analyze the batch by GC/MS using the SIM program.
   a. Method: THCSIM.M

2.

   Ions Monitored

   11-Nor-9-COOH-THC D3   374, 476, 491

   11-Nor-9-COOH-THC   371, 473, 488

N. Order of Batch Analysis

1. blank urine
2. LOQ
3. LOW
4. MED
5. HIGH
6. case samples
7. QC or Glucuronide QC
   a. If analyzing more than ten case samples, an additional QC should be added for every ten additional case samples. For example: If analyzing 11-20 case samples, one QC can be placed prior to case samples and one placed after the samples. **There must be at least one glucuronide QC per batch**, all QC sample(s) in the batch may be glucuronide QCs.
   b. Solvent wash and blanks: ethyl acetate, reagent grade

O. Data Interpretation
1. In order for the quantitative values to be reported, the following quality control criteria should be met:
   a. curve fit is quadratic with inverse of concentration weighting, $r^2$ value of .96 or higher
   b. ion ratios within specified range +/- 20% (absolute)
   c. standard and QC quantitation values within +/- 20% of known value
   d. retention times +/- 3% of calibration standard retention times
   e. sufficient peak shape and resolution
   f. blank/negative control has a quantitative value less than LOQ

P. Qualitative Reporting

1. If any of the QC quantitative values is not within +/- 20% of known value, the sample may be reported qualitatively. To report a sample as positive (+) the calculated concentration from Chemstation for the sample must be greater than the run cutoff (lowest concentration standard). The following criteria must also be met:
   a. ion ratios within specified range +/- 20% (absolute)
   b. retention times +/- 3% of calibration standard retention times
   c. sufficient peak shape and resolution
   d. blank/negative control has a quantitative value less than lowest concentration standard

Q. References

END OF DOCUMENT
I. DIAZEPAM, NORDIAZEPAM, OXAZEPAM AND TEMAZEPAM IDENTIFICATION AND QUANTITATION IN BLOOD

A. Safety - SAFETY WARNING!
   MTBSTFA and methylene chloride are suspected human carcinogens. Ammonium hydroxide and hydrochloric acid are caustic reagents. Human blood is a biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items are required while using this procedure:
   1. lab coat/protective clothing
   2. protective gloves
   3. safety hood sash down or use safety glasses
   4. consult the Safety Data Sheets for more information

B. Principle
   Diazepam, Nordiazepam, Oxazepam and Temazepam are recovered from blood by a solid phase extraction procedure using Diazepam-D5, Nordiazepam-D5, Oxazepam-D5, and Temazepam-D5 as internal standards. Identification and quantitation is by gas chromatography/mass spectrometry.

C. Specimen Requirement
   1. Two milliliters (2 ml) of sample is used for the analysis.
      a. If a smaller sample is required, see TOX.41 - Performing Extractions.

D. Detection Limit
   1. The limit of detection for this procedure is 50 ng/ml for Diazepam, Nordiazepam, Oxazepam, and Temazepam.

E. Quantitation Limit
   1. The analytical limit of quantitation for this procedure is 100 ng/ml for Diazepam, Nordiazepam, Oxazepam, and Temazepam.
   2. The reporting limit of quantitation for this procedure is 100 ng/ml for Diazepam, Nordiazepam, Oxazepam, and Temazepam.

F. Linear Range
   1. The linear range has been established from 50-3000 ng/ml for Diazepam, Nordiazepam, Oxazepam, and Temazepam. (Range attempted: 20-3000 ng/ml)

G. Carryover
   1. No carryover is present at 10,000 ng/ml.

H. Equipment
   This procedure uses the following laboratory equipment and supplies:
   1. 16 x 125 mm disposable glass culture tubes with screw caps
   2. 13 x 100 mm disposable glass tubes with teflon lined caps
   3. volumetric flasks
   4. plastic transfer pipettes
   5. 10-1000 µL pipettor and disposable pipette tips
6. 20-200 µL pipettor and disposable pipette tips  
7. 100-1000 µL pipettor and disposable pipette tips  
8. 500-2500 µL pipettor and disposable pipette tips  
9. 500-5000 µL pipettor and disposable pipette tips  
10. repeat pipettor and disposable tips (1.25 ml, 2.5 ml, 5 ml, 50 ml)  
11. autosampler vials with volume reducing inserts and crimp caps  
12. vortex mixer (Thermolyne or equivalent)  
13. specimen rocker (LabQuake Shaker or equivalent)  
14. centrifuge (IEC Centra-4B or equivalent)  
15. solid phase extraction columns, Varian Bond Elute Certify  
16. solid phase extraction manifold (vac-elut)  
17. evaporator/heating module  
18. gas chromatograph/mass spectrometer  

I. **Chemicals**  
This procedure uses the following chemicals:  
1. ammonium hydroxide, concentrate, reagent grade  **CAUTION IRRITANT**  
2. methanol, reagent grade  
3. sodium acetate  
4. glacial acetic acid, reagent grade  
5. hydrochloric acid, concentrate, reagent grade  **CAUTION IRRITANT**  
6. dry nitrogen gas (N₂)  
7. ethyl acetate, HPLC grade  
8. ethyl acetate, reagent grade  
9. zinc sulfate hydrate  
10. methyl(tert-butyldimethylsilyl)trifluoroacetamide (MTBSTFA)  

J. **Standards**  
All standards, calibrators, and controls are prepared in appropriate volumetric flasks. Directions and volumes used for preparation of calibrators are given for an assumed concentration (e.g. listed in catalog). The certified concentration, provided by the manufacturer on the certificate of analysis (COA), should be used in the preparation of solutions from an ampule. The volumes needed to achieve the final concentration of the calibrator or control should be calculated using the certified concentration from the certificate, not an assumed concentration for the ampule. Ampule concentrations may also change due to vendor availability or laboratory preference and a stock solution may not need to be prepared.  

1. **Stock standards:** The remaining standards from the ampules can be stored separately in appropriately labeled vials in the freezer for later use.  
   a. stock internal standard: 10 µg/ml Diazepam-D5/Nordiazepam-D5/Oxazepam-D5/Temazepam-D5 in methanol  
      Preparative: Draw 1ml 100 µg/ml ampule Diazepam-D5 standard, 100 µg/ml ampule Nordiazepam-D5 standard, 100 µg/ml ampule Oxazepam-D5 standard 100 µg/ml ampule Temazepam-D5 standard, dilute to 10 ml with methanol  
   b. stock calibration standard:  
      Ampules at a concentrations of 1.0 mg/ml  
   c. stock QC standard:  
      Ampules at a concentrations of 1.0 mg/ml  
2. **Working standards:**  
   a. working internal standard: 1 µg/ml Diazepam-D5/Nordiazepam-D5/Oxazepam-D5/Temazepam-D5 in distilled water
Prep: 1 ml of stock internal standard, dilute to 10 ml with distilled water

b. working calibration standard: 10 µg/ml Diazepam/Nordiazepam/Oxazepam/Temazepam in distilled water
   Prep: 100 µL of each stock calibration standard, dilute to 10 ml with distilled water

c. working QC standard: 10 µg/ml Diazepam/Nordiazepam/Oxazepam/Temazepam in distilled water
   Prep: 100 µL of each stock QC standard, dilute to 10 ml with distilled water

3. **Calibrators and Quality Controls:**
   a. 0.100 µg/ml calibrator
      Prep: 100 µL working calibration standard, dilute to 10 ml with blank blood
   b. 0.500 µg/ml calibrator
      Prep: 500 µL working calibration standard, dilute to 10 ml with blank blood
   c. 1.000 µg/ml calibrator
      Prep: 1 ml working calibration standard, dilute to 10 ml with blank blood
   d. 3.000 µg/ml calibrator
      Prep: 3 ml working calibration standard, dilute to 10 ml with blank blood
   e. low QC: 0.250 µg/ml
      Prep: 250 µL working QC standard, dilute to 10 ml with blank blood
   f. high QC: 0.750 µg/ml
      Prep: 750 µL working QC standard, dilute to 10 ml with blank blood

   Note: It is within the discretion of the analyst whether to use a high or low QC. A high and a low QC is necessary when analyzing a large batch of case samples.

K. **Reagents**

Reagents can be prepared before the extraction day. The elution solution must be made the day of analysis.

1. 5% NH₄OH
   Prep: See Reagent Preparation

2. 0.1M acetate buffer, pH 4.0
   Prep: See Reagent Preparation

3. 5% zinc sulfate in 50% methanol
   Prep: See Reagent Preparation

4. elution solution 3% NH₄OH/ ethyl acetate
   Prep: 3 ml concentrated ammonium hydroxide to a 100 ml volumetric flask and QS with ethyl acetate. Cover and sonicate for 10 minutes.

L. **Extraction Procedure**

The target drugs are extracted from the blood samples using the following procedure:

1. Prepare and label disposable (16 x 125 mm) culture tubes for each calibrator, quality control, sample, and blank blood.

2. Add 2.0 ml of calibrators, quality control, blank and case samples to be analyzed into the corresponding labeled tube.

3. Add 300 µL of working internal standard to each tube (note: the internal standard may be added before the calibrators, quality control, samples, and blank).

4. Add 4.0 ml of 5% zinc sulfate in 50% methanol to each tube. Vortex quickly, cap tubes, and rock for 10 minutes.

5. Centrifuge at 3000 rpm for 10-15 minutes.

6. Place the solid phase extraction columns on the vac-elut.

7. Rinse each column under vacuum of 1-2 mm Hg (It is important that the columns do not go dry prior to addition of the sample):
   a. 3.0 ml methanol (2x)
   b. 3.0 ml pH 4.0 acetate buffer (1x)

8. Turn off the vacuum. Add 3.0 ml pH 4.0 acetate buffer in preparation of sample application.

9. Add zinc sulfate solution from each blood tube to the appropriately labeled column. Allow the samples to pass through the column at a rate of 1-2 ml/min or under gravity.
10. Prepare the elution solution.
11. Rinse each column under vacuum of 1-2 mm Hg:
   a. 4.0 ml (10:90) MeOH:distilled water (2x)
12. Dry columns under full vacuum (10-15 mm Hg) for 15 minutes.
13. Rinse each column under vacuum of 1-2 mm Hg:
   a. 1.0 ml 5% NH₄OH (1x)
14. Dry columns under full vacuum (10-15 mm Hg) for 3 minutes.
15. Remove the top of the vac-elut and set aside. Be careful not to disturb any columns
16. Rinse out the canister and dry. Place rack with labeled (13 x 100 mm) culture tubes into vac-elut. Place the top back on vac-elut ensuring that the tubes are in the collecting position.
17. Add 3 ml of the elution solution (3% NH₄OH/ethyl acetate) and allow the elution solvent to pass through the column without vacuum.
18. Evaporate the samples to dryness under a stream of N₂ at 40°C.
19. Remove tubes from the heating module and allow samples to cool to room temperature. Add 75 µL ethyl acetate and 75 µL MTBSTFA to each tube.
20. Cap tubes with Teflon lined caps and vortex 10 seconds.

M. GC/MS Method and Parameters for Analysis
1. Analyze the batch by GC/MS using the SIM program.
   a. Method: BENZOBLS. M
2. Ions Monitored
   Diazepam D₅  261, 288
   Diazepam      256, 283, 221
   Nordiazepam D₅ 332, 389
   Nordiazepam    327, 329, 383
   Oxazepam D₅  462, 464
   Oxazepam      457, 459, 313
   Temazepam D₅ 362, 288
   Temazepam     357, 283, 255

N. Order of Batch Analysis
The order of analysis:
1. blank blood
2. LOQ
3. LOW
4. MED
5. HIGH
6. case samples
7. QC
   a. If analyzing more than ten case samples, an additional QC should be added for every ten additional case samples. For example: If analyzing 11-20 case samples, one QC can be placed prior to case samples and one placed after the samples.
   b. Solvent wash and blanks: ethyl acetate, reagent grade

O. Data Interpretation
In order for the quantitative values to be reported, the following quality control criteria should be met:
1. ion ratios within specified range +/- 20% (absolute)
2. QC quantitation values within +/- 20% of known value
3. retention times +/- 3% of calibration standard retention times
4. calibration curve with \( r^2 \) value of .96 or higher using the quadratic model with equal weighting
5. sufficient peak shape and resolution
6. blank/negative control has a quantitative value less than LOQ

P. Qualitative Reporting

1. If any of the QC quantitative values is not within +/- 20% of known value, the sample may be reported qualitatively. To report a sample as positive (+) the calculated concentration from Chemstation for the sample must be greater than the run cutoff (lowest concentration standard). The following criteria must also be met:
   a. ion ratios within specified range +/- 20% (absolute)
   b. retention times +/- 3% of calibration standard retention times
   c. sufficient peak shape and resolution
   d. blank/negative control has a quantitative value less than lowest concentration standard

Q. References

END OF DOCUMENT
I. OXAZEPAM IDENTIFICATION AND QUANTITATION IN URINE

A. Safety - SAFETY WARNING!

Bis (trimethylsilyl) trifluoroacetamide (BSTFA) with 1% TMCS and is a suspected human carcinogen. Ammonium hydroxide and hydrochloric acid are caustic reagents. Human urine is a biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items are required while using this procedure:

1. lab coat/protective clothing
2. protective gloves
3. safety hood sash down or use safety glasses
4. consult the Safety Data Sheets for more information

B. Principle

Oxazepam is recovered from urine by a solid phase extraction procedure using Oxazepam-D5 as the internal standard. Identification and quantitation is by gas chromatography/mass spectrometry.

C. Specimen Requirement

1. Two milliliters (2 ml) of sample is used for the analysis.
   a. If a dilution is required based on screening results see TOX.41 - Performing Extractions.

D. Detection Limit

1. The limit of detection for this procedure is 20 ng/ml for Oxazepam.

E. Quantitation Limit

1. The analytical limit of quantitation for this procedure is 50 ng/ml for Oxazepam.
2. The reporting limit of quantitation for this procedure is 50 ng/ml for Oxazepam.

F. Linear Range

1. The linear range has been established from 50 - 1,000 ng/ml for Oxazepam.

G. Carryover

1. No significant carryover is present at 10,000 ng/ml

H. Equipment

This procedure uses the following laboratory equipment and supplies:

1. 15 ml (16 x 125 mm) disposable glass culture tubes with screw caps
2. 5 ml (13 x 100 mm) disposable glass tubes with Teflon lined caps
3. volumetric flasks
4. plastic transfer pipettes
5. glass Pasteur pipettes
6. 100-1000 µL pipettor and disposable pipette tips
7. 20-200 µL pipettor and disposable pipette tips
8. 500-2500 µL pipettor and disposable pipette tips
9. 500-5000 µL pipettor and disposable pipette tips
10. repeat pipettor and disposable tips (1.25 ml, 2.5 ml, 5 ml, 50 ml)
11. autosampler vials with volume reducing inserts and crimp caps
12. vortex mixer (Thermolyne or equivalent)
13. specimen rocker (LabQuake Shaker or equivalent)
14. centrifuge (IEC Centra-4B or equivalent)
15. solid phase extraction columns, Varian Bond Elute
16. solid phase extraction manifold (vac-elut)
17. evaporator/heating module
18. gas chromatograph/mass spectrometer

I. **Chemicals**

This procedure uses the following chemicals:

1. ammonium hydroxide, concentrate, reagent grade **CAUTION IRRITANT**
2. methylene chloride, reagent grade
3. methanol, reagent grade
4. isopropanol, reagent grade
5. sodium acetate
6. glacial acetic acid, reagent grade
7. bis (trimethylsilyl) trifluoroacetamide (BSTFA) with 1% trimethylchlorosilane
8. hydrochloric acid, concentrate, reagent grade **CAUTION IRRITANT**
9. dry nitrogen gas (N₂)
10. ethyl acetate, HPLC grade

J. **Standards**

All standards, calibrators, and controls are prepared in appropriate volumetric flasks, utilizing calibrated pipettes. Directions and volumes used for preparation of calibrators are given for an assumed concentration (e.g. listed in catalog). The certified concentration, provided by the manufacturer on the certificate of analysis (COA), will be used in the preparation of solutions from an ampule. The volumes needed to achieve the final concentration of the calibrator or control will be calculated using the certified concentration from the certificate, not an assumed concentration for the ampule.

1. **Stock standards**: Stock standards may be stored in freezer.
   a. stock internal standard: 10 µg/ml Oxazepam D5 in methanol
      *Prep:* Draw 100 µg/ml ampule Oxazepam D5 standard dilute to 10 ml with methanol.
   b. stock calibration standard: 100 µg/ml Oxazepam in methanol
      *Prep:* Draw 1 ml of 1 mg/ml ampule Oxazepam standard, dilute to 10 ml with methanol.
   c. stock QC standard: 100 µg/ml Oxazepam in methanol
      *Prep:* Draw 1 ml of 1 mg/ml ampule Oxazepam standard, dilute to 10 ml with methanol.
   d. stock glucuronide: 10 mg/ml Oxazepam-glucuronide in water
      *Prep:* Draw 1 ml of 100 µg/ml ampule Oxazepam glucuronide, dilute to 10 ml with distilled water.

2. **Working standards**:
   a. working internal standard: 1 µg/ml Oxazepam-D5 in distilled water
      *Prep:* 1 ml of stock internal standard, dilute to 10 ml with distilled water
   b. working calibration standard: 10 µg/ml Oxazepam in distilled water
      *Prep:* 1 ml of stock calibration standard, dilute to 10 ml with distilled water
   c. working QC standard: 10 µg/ml Oxazepam in distilled water
      *Prep:* 1 ml of stock QC standard, dilute to 10 ml with distilled water

3. **Calibrators and Quality Controls**: Urine standards can be prepared ahead of time, dispensed into freezer vials, and stored in the freezer.
a. 0.050 µg/ml calibrator  
Prep: 50 µL working calibration standard, dilute to 10 ml with human urine

b. 0.250 µg/ml calibrator  
Prep: 250 µL working calibration standard, dilute to 10 ml with human urine

c. 0.750 µg/ml calibrator  
Prep: 750 µL working calibration standard, dilute to 10 ml with human urine

d. 1.000 µg/ml calibrator  
Prep: 1.0 ml working calibration standard, dilute to 10 ml with human urine

e. low QC: 0.400 µg/ml  
Prep: 400 µL working QC standard, dilute to 10 ml with human urine

f. high QC: 800 µg/ml  
Prep: 800 µL working QC standard, dilute to 10 ml with human urine

g. low glucuronide QC: 0.400 (0.645 µg/ml glucuronide)  
Prep: 645 µL stock glucuronide, dilute to 10 ml with human urine

h. high glucuronide QC: 0.800 (1.290 µg/ml glucuronide)  
Prep: 1.290 ml stock glucuronide, dilute to 10 ml with human urine

Note: It is within the discretion of the analyst whether to use a high or low QC. A high and a low QC is necessary when analyzing a large batch of case samples.

K. Reagents
Reagents can be prepared before the extraction day. The elution solution must be made the day of analysis.

1. 0.1 M sodium acetate buffer, pH 6.0  
Prep: See Reagent Preparation

2. 0.1M hydrochloric acid in distilled water.  
Prep: See Reagent Preparation

3. 2M sodium acetate buffer, pH 4.5  
Prep: See Reagent Preparation

4. elution solution (8:2) methylene chloride/isopropanol with 2% NH₄OH  
Prep: 20 ml isopropanol to a 100 ml volumetric flask and QS with methylene chloride. Remove 2 ml of the solution. Add 2 ml concentrated ammonium hydroxide. Cover and sonicate for 10 minutes.

L. Extraction Procedure
The target drug is extracted from the urine samples using the following procedure:

1. Turn on heating block to 56 °C with appropriate 15 ml well heating blocks.

2. Prepare and label disposable culture tubes for each calibrator, quality control, sample, and blank urine.

3. Add 2.0 ml of calibrators, quality control, blank and samples to be analyzed into the corresponding labeled tube.

4. Add 80µL β-Glucuronidase (10,000 units) from Helix pomatia.

5. Add 100µL of 2M sodium acetate buffer pH 4.5.

6. Hydrolyze at 56 °C for 2 hours. Do not hydrolyzed standards and non-glucuronide QC.

7. Cool to room temperature and add 300µL of working internal standard to each tube.

8. Cap and vortex each tube for approximately 5-10 seconds.

9. Rotate the tubes for approximately 5 minutes.

10. Centrifuge at 3000 rpm for 10-15 minutes.

11. Label and place the solid phase extraction columns on the vac-elut.

12. Rinse each column under vacuum of 1-2 mm Hg (It is important that the columns do not go dry prior to addition of the sample):
   a. 3.0 ml methanol (1x)
   b. 3.0 ml DI H2O (1x)
   c. 2.0 ml of pH 6.0 sodium acetate buffer (1x)
13. Turn off the vacuum. Add 2.0 ml pH 6.0 acetate buffer in preparation of sample application.

14. Transfer the centrifuged samples to the corresponding solid phase column. Allow the samples to pass through each column at a rate of 1-2ml/ minute (6-12 minutes). Preferably without vacuum.

15. Prepare the elution solution.

16. Rinse each column under vacuum of 1-2 mm Hg:
   a. 3.0 ml distilled water (1x)
   b. 3.0 ml 0.1 M HCl (1x)
   c. 3.0 ml of methanol (1x)

17. Dry columns under full vacuum (10-15 mm Hg) for 5 minutes.

18. Remove the top of the vac-elut and set aside. Be careful not to disturb any columns.

19. Rinse out the canister and dry. Place rack with labeled 5 ml culture tubes into vac-elut. Place the top back on vac-elut ensuring that the tubes are in the collecting position.

20. Add 3 ml of the elution solution and allow the elution solvent to pass through the column without vacuum.

21. Evaporate the samples to dryness under a stream of N₂ at 40°C.

22. Remove tubes from the heating module and allow samples to cool to room temperature. Add 50 µL ethyl acetate and 50 µL BSTFA 1% TMCS to each tube.

23. Cap tubes with Teflon lined caps and vortex 10 seconds.

24. Heat at approximately 70°C for 30 minutes. Remove and cool to room temperature. Transfer to labeled autosampler vials with volume reducing inserts. Cap vials.

M. GC/MS Method and Parameters for Analysis

1. Analyze the batch by GC/MS using the SIM program.
   a. Method: OXASIM.M oxasim.m

2. Ions Monitored
   Oxazepam D5 434, 420
   Oxazepam 429, 430, 415

N. Order of Batch Analysis

1. blank urine
2. LOQ
3. LOW
4. MED
5. HIGH
6. case samples
7. QC or Glucuronide QC
   a. If analyzing more than ten case samples, an additional QC should be added for every ten additional case samples. For example: If analyzing 11-20 case samples, one QC can be placed prior to case samples and one placed after the samples. **There must be at least one glucuronide QC per batch**; all QC sample(s) in the batch may be glucuronide QCs.
   b. Placement of case samples and QC’s are interchangeable
   c. Solvent wash and blanks: ethyl acetate, reagent grade

O. Data Interpretation

1. In order for the quantitative values to be reported, the following quality control criteria should be met:
   a. calibration curve with "$r^2$" value of .96 or higher using the quadratic model with inverse of concentration weighting
b. ion ratios within specified range +/- 20% (absolute)
c. standard and QC quantitation values within +/- 20% of known value
d. retention times +/- 3% of calibration standard retention times
e. sufficient peak shape and resolution
f. blank/negative control has a quantitative value less than LOQ

P. Qualitative Reporting

1. If any of the QC quantitative values is not within +/- 20% of known value, the sample may be reported qualitatively. To report a sample as positive (+) the calculated concentration from Chemstation for the sample must be greater than the run cutoff (lowest concentration standard). The following criteria must also be met:
   a. ion ratios within specified range +/- 20% (absolute)
   b. retention times +/- 3% of calibration standard retention times
c. sufficient peak shape and resolution
d. blank/negative control has a quantitative value less than lowest concentration standard

I. GAMMA-HYDROXYBUTYRATE IDENTIFICATION AND QUANTITATION IN URINE

A. Safety - SAFETY WARNING!
   Bis(trimethylsilyl)trifluoroacetamide (BSTFA) with 1% TMCS and is a suspected human carcinogen. Sulfuric acid is a caustic reagent. Human urine is a biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items are required while using this procedure:
   1. lab coat/protective clothing
   2. protective gloves
   3. safety hood sash down or use safety glasses
   4. consult the Safety Data Sheets for more information

B. Principle
   Gamma-Hydroxybutyrate is recovered from urine by a liquid/liquid extraction procedure using Gamma-Hydroxybutyrate D6 as the internal standard. Identification and quantitation is by gas chromatography/mass spectrometry.

C. Specimen Requirement
   1. One half milliliter (0.5 ml) of sample is used for the analysis.

D. Detection Limit
   1. The limit of detection for this procedure is 10 µg/ml for Gamma-Hydroxybutyrate.

E. Quantitation Limit
   1. The analytical limit of quantitation for this procedure is 15 µg/ml for Gamma-Hydroxybutyrate.
   2. The reporting limit of quantitation for this procedure is 15 µg/ml for Gamma-Hydroxybutyrate.

F. Linear Range
   1. The linear range has been established from 10 - 200 µg/ml for Gamma-Hydroxybutyrate. (Range attempted: 10-500 µg/ml)

G. Carryover
   1. No significant carryover is present at 500 µg/ml.

H. Equipment
   This procedure uses the following laboratory equipment and supplies:
   1. 5 ml (13 x 100 mm) disposable glass tubes with Teflon lined caps
   2. 15 ml (16 x 125 mm) disposable glass culture tubes with screw caps
   3. volumetric flasks
   4. plastic transfer pipettes
   5. glass Pasteur pipettes
   6. 2-20 µL pipettor and disposable pipette tips
   7. 100-1000 µL pipettor and disposable pipette tips
   8. 20-200 µL pipettor and disposable pipette tips
   9. 500-2500 µL pipettor and disposable pipette tips
10. 500-5000 µL pipettor and disposable pipette tips  
11. repeat pipettor and disposable tips (1.25 ml, 2.5 ml, 5 ml, 50 ml)  
12. autosampler vials with volume reducing inserts and crimp caps  
13. vortex mixer (Thermolyne or equivalent)  
14. centrifuge (IEC Centra-4B or equivalent)  
15. evaporator/heating module  
16. gas chromatograph/mass spectrometer  

I. Chemicals  
This procedure uses the following chemicals:  
1. sulfuric acid, concentrate, reagent grade CAUTION IRRITANT  
2. dry nitrogen gas (N₂)  
3. ethyl acetate, reagent and HPLC grade  
4. bis (trimethylsilyl) trifluoroacetamide (BSTFA) with 1% trimethylchlorosilane  

J. Standards  
All standards, calibrators, and controls are prepared in appropriate volumetric flasks, utilizing calibrated pipettes. Directions and volumes used for preparation of calibrators are given for an assumed concentration (e.g. listed in catalog). The certified concentration, provided by the manufacturer on the certificate of analysis (COA), should be used in the preparation of solutions from an ampule. The volumes needed to achieve the final concentration of the calibrator or control should be calculated using the certified concentration from the certificate, not an assumed concentration for the ampule. Ampule concentrations may also change due to vendor availability or laboratory preference and a stock solution may not need to be prepared.  

1. Stock standards:  
   a. 1.0 mg/ml ampules gamma-hydroxybutyrate and gamma-hydroxybutyrate D6  

2. Working standards:  
   a. working internal standard: 200 µg/ml gamma-hydroxybutyrate D6 in distilled water  
      Prep: Draw 1ml of 1 mg/ml ampule and dilute to 5 ml with distilled water  
   b. working calibration standard: 400.00 µg/ml gamma-hydroxybutyrate (salt) in distilled water  
      Prep: Take 2 ml of 1 mg/ml solution of gamma-hydroxybutyrate, dilute to 5 ml with distilled water  
      Note: The calibration standard is the salt form of GHB, the volumes used to prepare the calibrators are adjusted to achieve the final concentration in base equivalents. The equivalent base concentration of the working calibration standard is 330.27 µg/ml.  
   c. working QC standard: 400.00 µg/ml gamma-hydroxybutyrate (base) in distilled water  
      Prep: Take 2 ml of 1 mg/ml solution of gamma-hydroxybutyrate, dilute to 5 ml with distilled water  

3. Calibrators and Controls:  
   a. 10.0 µg/ml calibrator  
      Prep: 151.4 µL working calibration standard, dilute to 5 ml with human urine  
      Note: this LOD calibrator is below the LOQ for the procedure. If samples are present between 10 µg/ml and 15µg/ml, the sample should be reported as present but below the LOQ.  
   b. 15.0 µg/ml calibrator  
      Prep: 227 µL working calibration standard, dilute to 5 ml with human urine  
   c. 50.0 µg/ml calibrator  
      Prep: 0.757 ml working calibration standard, dilute to 5 ml with human urine  
   d. 100.0 µg/ml calibrator  
      Prep: 1.514 ml working calibration standard, dilute to 5 ml with human urine  
   e. low QC: 25.0 µg/ml  
      Prep: 312 µL working QC standard, dilute to 5 ml with human urine  
   f. high QC: 75.0 µg/ml  
      Prep: 937 µL working QC standard, dilute to 5 ml with human urine
Note: It is within the discretion of the analyst whether to use a high or low QC. A high and a low QC is necessary when when analyzing 11-20 case samples.

K. **Reagents**
Reagents can be prepared before the extraction day.

1. 0.1 N sulfuric acid (cold)
   Prep: See Reagent Preparation
   Storage: Keep in refrigerator

L. **Extraction Procedure**
The target drugs are extracted from the urine samples using the following procedure:

1. Prepare and label disposable 15 ml culture tubes for each calibrator, quality control, sample, and blank urine.
2. Add 0.5 ml of calibrators, quality control, blank and samples to be analyzed into the corresponding labeled tube.
3. Add 250µL of working internal standard to each tube (note: the internal standard may be added before the calibrators, quality control, samples, and blank).
4. Add 250 µL of cold 0.1N sulfuric acid to each tube. Vortex for 10-15 seconds.
5. Add 3.0 ml of ethyl acetate to each tube.
6. Cap and rotate tubes for 10 minutes. Centrifuge at 3000 rpm for 5 minutes.
7. Transfer the ethyl acetate (top) layer to labeled 8 ml disposable culture tubes.
8. Re-extract the aqueous layer by adding 3.0 ml of ethyl acetate to the original aqueous layer.
9. Cap and rotate tubes for 10 minutes. Centrifuge at 3000 rpm for 5 minutes. Transfer the ethyl acetate (top) layer to the corresponding 8 ml disposable culture tubes. Start to evaporate the collective samples to dryness under a stream of N\textsubscript{2} at 37°C.
10. Re-extract the aqueous layer a final time by adding 3.0 ml of ethyl acetate to the original aqueous
11. Cap and rotate tubes for 10 minutes. Centrifuge at 3000 rpm for 5 minutes. Transfer the ethyl acetate (top) layer to the corresponding 8 ml disposable culture tubes
12. Finish evaporating the collective samples to dryness under a stream of N\textsubscript{2} at 37°C.
13. Allow the samples to cool to room temperature. Add 75µL ethyl acetate and 75 µL BSTFA with 1% TMCS to each tube.
14. Cap tubes with Teflon lined caps and vortex 10 seconds.
15. Heat at approximately 70°C for 30 minutes. Remove and cool to room temperature. Transfer to labeled autosampler vials with volume reducing inserts. Cap vials.

M. **GC/MS Method and Parameters for Analysis**
1. Analyze the batch by GC/MS using the SIM program.
   a. Method: GHBURSIM.M
2. **Ions Monitored**
   Gamma-Hydroxybutyrate D6 239, 240
   Gamma-Hydroxybutyrate 233, 204, 234

N. **Order of Batch Analysis**
The order of analysis:
1. blank urine
2. LOD
3. LOQ
4. MED
5. HIGH
6. case samples
7. QC
   a. If analyzing more than ten case samples, an additional QC should be added for every ten additional case samples. For example: If analyzing 11-20 case samples, one QC can be placed prior to the samples and one placed after the samples.
   b. Solvent wash and blanks: ethyl acetate, reagent grade

O. Data Interpretation
   1. In order for the quantitative values to be reported, the following quality control criteria should be met:
      a. calibration curve is linear with \( r^2 \) value of .96 or higher, the following models must be used:
         i. Using the RTX-5 column, the quadratic model with equal weighting
         ii. Using the RTX-35 column, the quadratic model with inverse of concentration weighting
      b. ion ratios within specified range +/- 20% (absolute)
      c. standard and QC quantitation values within +/- 20% of known value
      d. retention times +/- 3% of calibration standard retention times
      e. sufficient peak shape and resolution
      f. blank/negative control has a quantitative value less than LOQ

P. Qualitative Reporting
   1. If any of the QC quantitative values is not within +/- 20% of known value, the sample may be reported qualitatively. To report a sample as positive (+) the calculated concentration from Chemstation for the sample must be greater than the run cutoff (lowest concentration standard). The following criteria must also be met:
      a. ion ratios within specified range +/- 20% (absolute)
      b. retention times +/- 3% of calibration standard retention times
      c. sufficient peak shape and resolution
      d. blank/negative control has a quantitative value less than lowest concentration standard

END OF DOCUMENT
I. GAMMA-HYDROXYBUTYRATE IDENTIFICATION AND QUANTITATION IN BLOOD

A. **Safety - SAFETY WARNING!**
   - **Bis (trimethylsilyl) trifluoroacetamide (BSTFA)** with 1% TMCS and is a suspected human carcinogen. **Sulfuric acid** is a caustic reagent. Human blood is a biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items are required while using this procedure:
     1. lab coat/protective clothing
     2. protective gloves
     3. safety hood sash down or use safety glasses
     4. consult the Safety Data Sheets for more information

B. **Principle**
   Gamma-Hydroxybutyrate is recovered from blood by a liquid/liquid extraction procedure using Gamma-Hydroxybutyrate D6 as the internal standard. Identification and quantitation is by gas chromatography/mass spectrometry.

C. **Specimen Requirement**
   1. Two milliliter (2.0 ml) of sample is used for the analysis.

D. **Detection Limit**
   1. The limit of detection for this procedure is 10 µg/ml for Gamma-Hydroxybutyrate.

E. **Quantitation Limit**
   1. The analytical limit of quantitation for this procedure is 15 µg/ml for Gamma-Hydroxybutyrate.
   2. The reporting limit of quantitation for this procedure is 15 µg/ml for Gamma-Hydroxybutyrate.

F. **Linear Range**
   1. The linear range has been established from 10 - 200 µg/ml for Gamma-Hydroxybutyrate. (Range attempted: 10-200 µg/ml)

G. **Carryover**
   1. No significant carryover is present at 500 µg/ml.

H. **Equipment**
   This procedure uses the following laboratory equipment and supplies:
   1. 5 ml (13 x 100 mm) disposable glass tubes with Teflon lined caps
   2. 15 ml (16 x 125 mm) disposable glass culture tubes with screw caps
   3. volumetric flasks
   4. plastic transfer pipettes
   5. glass Pasteur pipettes
   6. 2-20 µL pipettor and disposable pipette tips
   7. 100-1000 µL pipettor and disposable pipette tips
   8. 20-200 µL pipettor and disposable pipette tips
   9. 500-2500 µL pipettor and disposable pipette tips
10. 500-5000 µL pipettor and disposable pipette tips
11. repeat pipettor and disposable tips (1.25 ml, 2.5 ml, 5 ml, 50 ml)
12. autosampler vials with volume reducing inserts and crimp caps
13. vortex mixer (Thermolyne or equivalent)
14. centrifuge (IEC Centra-4B or equivalent)
15. evaporator/heating module
16. gas chromatograph/mass spectrometer

I. Chemicals
This procedure uses the following chemicals:
1. sulfuric acid, concentrate, reagent grade CAUTION IRRITANT
2. dry nitrogen gas (N₂)
3. ethyl acetate, reagent and HPLC grade
4. bis (trimethylsilyl) trifluoroacetamide (BSTFA) with 1% trimethylchlorosilane

J. Standards
All standards, calibrators, and controls are prepared in appropriate volumetric flasks, utilizing calibrated pipettes. Directions and volumes used for preparation of calibrators are given for an assumed concentration (e.g. listed in catalog). The certified concentration, provided by the manufacturer on the certificate of analysis (COA), should be used in the preparation of solutions from an ampule. The volumes needed to achieve the final concentration of the calibrator or control should be calculated using the certified concentration from the certificate, not an assumed concentration for the ampule. Ampule concentrations may also change due to vendor availability or laboratory preference and a stock solution may not need to be prepared.

1. Stock standards:
   a. 1.0 mg/ml ampules gamma-hydroxybutyrate and gamma-hydroxybutyrate D6

2. Working standards:
   a. working internal standard: 200 µg/ml gamma-hydroxybutyrate D6 in distilled water
      Prep: Draw 1 ml of 1 mg/ml ampule and dilute to 5 ml with distilled water
   b. working calibration standard: 400.00 µg/ml gamma-hydroxybutyrate (salt) in distilled water
      Prep: Take 2 ml of 1 mg/ml solution of gamma-hydroxybutyrate, dilute to 5 ml with distilled water
      Note: the calibration standard is the salt form of GHB, the volumes used to prepare the calibrators are adjusted to achieve the final concentration in base equivalents. The equivalent base concentration of the working calibration standard is 330.27 µg/ml.
   c. working QC standard: 400.00 µg/ml gamma-hydroxybutyrate (base) in distilled water
      Prep: Take 2 ml of 1 mg/ml solution of gamma-hydroxybutyrate, dilute to 5 ml with distilled water
   d. working QC standard: 400.00 µg/ml gamma-hydroxybutyrate (base) in distilled water
      Prep: Take 2 ml of 1 mg/ml solution of gamma-hydroxybutyrate, dilute to 5 ml with distilled water

3. Calibrators and Controls: Blood standards can be prepared ahead of time, dispensed into freezer vials, and stored in the freezer.
   a. 10.0 µg/ml calibrator
      Prep: 151.4 µL working calibration standard, dilute to 5 ml with human blood
      Note: this LOD calibrator is below the LOQ for the procedure. If samples are present between 10 µg/ml and 15 µg/ml, the sample should be reported as present but below the LOQ.
   b. 15.0 µg/ml calibrator
      Prep: 227 µL working calibration standard, dilute to 5 ml with human blood
   c. 50.0 µg/ml calibrator
      Prep: 0.757 ml working calibration standard, dilute to 5 ml with human blood
   d. 100.0 µg/ml calibrator
      Prep: 1.514 ml working calibration standard, dilute to 5 ml with human blood
   e. low QC: 25.0 µg/ml
      Prep: 312 µL working QC standard, dilute to 5 ml with human blood
   f. high QC: 75.0 µg/ml
      Prep: 937 µL working QC standard, dilute to 5 ml with human blood
Note: It is within the discretion of the analyst whether to use a high or low QC. A high and low QC is necessary when analyzing 11-20 case samples.

K. **Reagents**

Reagents can be prepared before the extraction day.

1. 0.1 N sulfuric acid (cold)
   
   **Prep:** See Reagent Preparation
   
   **Storage:** Keep in refrigerator

L. **Extraction Procedure**

The target drugs are extracted from the blood samples using the following procedure:

1. Prepare and label disposable 15 ml (16 x 125) culture tubes for each calibrator, quality control, sample, and blank blood.
2. Add 2.0 ml of calibrators, quality control, blank and samples to be analyzed into the corresponding labeled tube.
3. Add 250µL of working internal standard to each tube (note: the internal standard may be added before the calibrators, quality control, samples, and blank).
4. Add 250 µL of cold 0.1N sulfuric acid to each tube. Vortex for 10 -15 seconds.
5. Add 3.0 ml of ethyl acetate to each tube.
6. Cap and rotate tubes for 10 minutes. Centrifuge at 3000 rpm for 5 minutes.
7. **Transfer the ethyl acetate (top) layer to labeled 8 ml disposable culture tubes.**
8. Re-extract the aqueous layer by adding 3.0 ml of ethyl acetate to the original aqueous layer.
9. Cap and rotate tubes for 10 minutes. Centrifuge at 3000 rpm for 5 minutes. Transfer the ethyl acetate (top) layer to the corresponding 8 ml disposable culture tubes. Start to evaporate the collective samples to dryness under a stream of N\textsubscript{2} at 37°C.
10. Re-extract the aqueous layer a final time by adding 3.0 ml of ethyl acetate to the original aqueous
11. Cap and rotate tubes for 10 minutes. Centrifuge at 3000 rpm for 5 minutes. Transfer the ethyl acetate (top) layer to the corresponding 8 ml disposable culture tubes
12. Finish evaporating the collective samples to dryness under a stream of N\textsubscript{2} at 37°C.
13. Allow the samples to cool to room temperature. Add 75µL ethyl acetate and 75 µL BSTFA with 1% TMCS to each tube.
14. Cap tubes with Teflon lined caps and vortex 10 seconds.
15. Heat at approximately 70°C for 30 minutes. Remove and cool to room temperature. Transfer to labeled autosampler vials with volume reducing inserts. Cap vials.

M. **GC/MS Method and Parameters for Analysis**

1. Analyze the batch by GC/MS using the SIM program.
   
   a. Method: GHBBLSIM.M

2. **Ions Monitored**

   Gamma-Hydroxybutyrate D\textsubscript{6} 239, 240
   
   Gamma-Hydroxybutyrate 233, 204, 234

N. **Order of Batch Analysis**

The order of analysis:

1. blank blood
2. LOD
3. LOQ
4. MED 100.0 µg/ml calibrator
5. HIGH 200.0 µg/ml calibrator
6. case samples
7. QC
   a. If analyzing more than ten case samples, an additional QC should be added for every ten additional case samples. For example: If analyzing 11-20 case samples, one QC can be placed prior to the case samples and one placed after the samples.
   b. Solvent wash and blanks: ethyl acetate, reagent grade

O. Data Interpretation
   1. In order for the quantitative values to be reported, the following quality control criteria should be met:
      a. calibration curve is linear with \( r^2 \) value of .96 or higher, the following models must be used:
         i. Using the RTX-5 column, the quadratic model with equal weighting
         ii. Using the RTX-35 column, the quadratic model with inverse of concentration weighting
      b. ion ratios within specified range +/- 20% (absolute)
      c. standard and QC quantitation values within +/- 20% of known value
      d. retention times +/- 3% of calibration standard retention times
      e. sufficient peak shape and resolution
      f. blank/negative control has a quantitative value less than LOQ

P. Qualitative Reporting
   1. If any of the QC quantitative values is not within +/- 20% of known value, the sample may be reported qualitatively. I. ACID/NEUTRAL AND BASIC DRUG SCREEN IN BLOOD

A. Safety - SAFETY WARNING!
   Ammonium hydroxide is a caustic reagent. Human blood is a biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items are required while using this procedure:
   1. lab coat/protective clothing
   2. protective gloves
   3. safety hood sash down or use safety glasses
   4. consult the Safety Data Sheets for more information

B. Principle
   Acid/neutral and basic drugs are recovered from blood by a solid phase extraction procedure. Qualitative analysis and identification is by gas chromatography/mass spectrometry.

C. Specimen Requirement
   1. Four milliliter (4 ml) of sample is used for the analysis.

D. Detection Limit
   1. The limit of detection for this procedure is 0.250-3.000 µg/ml, however it varies from drug to drug.

E. Equipment
   This procedure uses the following laboratory equipment and supplies:
   1. 15 ml (16 x 125 mm) disposable glass culture tubes with screw caps
   2. 5 ml (13 x 100 mm) disposable glass tubes with Teflon lined caps
   3. volumetric flasks
   4. plastic transfer pipettes
   5. glass Pasteur pipettes
   6. 2-20 µL pipettor and disposable pipette tips
   7. 100-1000 µL pipettor and disposable pipette tips
   8. 20-200 µL pipettor and disposable pipette tips
   9. 500-2500 µL pipettor and disposable pipette tips
   10. 500-5000 µL pipettor and disposable pipette tips
   11. repeat pipettor and disposable tips (1.25 ml, 2.5 ml, 5 ml, 50 ml)
   12. autosampler vials with volume reducing inserts and crimp caps
   13. vortex mixer (Thermolyne or equivalent)
   14. specimen rocker (LabQuake Shaker or equivalent)
   15. centrifuge (IEC Centra-4B or equivalent)
   16. solid phase extraction columns, Varian Bond Elut
   17. evaporator/heating module
18. gas chromatograph/mass spectrometer

**F. Chemicals**
This procedure uses the following chemicals:

1. acetic acid
2. zinc-sulfate
3. sodium acetate
4. chloroform (reagent grade)
5. acetone (reagent grade)
6. ethyl acetate (reagent grade)
7. ammonium hydroxide

**G. Standards**
All standards, calibrators, and controls are prepared in appropriate volumetric flasks. Directions and volumes used for preparation of calibrators are given for an assumed concentration (e.g. listed in catalog). The certified concentration, provided by the manufacturer on the certificate of analysis (COA), should be used in the preparation of solutions from an ampule. The volumes needed to achieve the final concentration of the calibrator or control should be calculated using the certified concentration from the certificate, not an assumed concentration for the ampule. Ampule concentrations may also change due to vendor availability or laboratory preference and a stock solution may not need to be prepared.

1. **Stock standards**: The remaining standards from the ampules can be stored separately in appropriately labeled vials in the freezer for later use.
   
   a. stock internal standard: 100 µg/ml Mepivacaine in methanol
      
      Prep: 1 mg/ml ampule mepivacaine hydrochloride standard, dilute to 10 ml with methanol.
   
   b. stock internal standard: 5.0 mg/ml Barbital in methanol
      
      Prep: 125.0 mg Barbital standard, dilute to 25 ml with methanol
   
   c. stock resolution solution: 10 µg/ml of standards in methanol
      
      Prep: 100 µL of the following suggested 1 mg standards from ampule: Amobarbital, Carisoprodol, Diazepam, Amitriptyline, Phencyclidine, Methadone, Lidocaine, Trazodone, Methaqualone, Meprobamate, and Hydrocodone, dilute to 10 ml with methanol.

2. **Working standards**:
   
   a. working internal standard: 500 µg/ml Barbital/5 µg/ml Mepivacaine in distilled water
      
      Prep: 1 ml of stock barbital and 500 µl of stock mepivacaine internal standard, dilute to 10 ml with distilled water
   
   b. working resolution solution (SPE test mix) standard:
      
      Prep: 1 ml of stock resolution solution (SPE test mix) standard, 1 ml of distilled water, dilute to 5 ml with human blood

**H. Reagents**
Reagents can be prepared before the extraction day. The elution solution must be made the day of analysis.

1. 0.01M acetic acid
   
   Prep: See Reagent Preparation

2. 5% zinc sulfate in 50% methanol
   
   Prep: See Reagent Preparation

3. Elution solution (50:50) acetone/chloroform (acid/neutral fraction)
   
   Prep: 50 ml acetone to a 100 ml volumetric flask and QS with chloroform. Cover and sonicate for 10 minutes.

4. Elution solution (98:2) ethyl acetate/NH₄OH (basic fraction)
   
   Prep: 1 ml concentrated NH₄OH to a 50 ml volumetric flask and QS with ethyl acetate. Cover and sonicate for 10 minutes.

**I. Extraction Procedure**
The target drugs are extracted from the blood samples using the following procedure:

1. Prepare and label disposable (16 x 125 mm) culture tubes quality control (test mix), sample, and blank blood.
2. Add 4.0 ml of quality control, blank and case samples to be analyzed into the corresponding labeled tube.
3. Add 500µL of working internal standard to each tube (note: the internal standard may be added before the calibrators, quality control, samples, and blank).
4. Add 4.0 ml of 5% zinc sulfate in 50% methanol to each tube. Cap and vortex for 10-15 seconds to break up any clots. Rotate for 10 minutes.
5. Centrifuge at 3000 rpm for 10-15 minutes.
6. Place the solid phase extraction columns on the vac-elut.
7. Rinse each column under vacuum of 1-2 mm Hg (It is important that the columns do not go dry prior to addition of the sample):
   a. 3.0 ml methanol (1x)
   b. 2.0 ml pH 6.0 acetate buffer (1x)
8. Turn off the vacuum. Add 2.0 ml pH 6.0 acetate buffer in preparation of sample application.
9. Add zinc sulfate solution from each blood tube to the appropriately labeled column. Allow the samples to pass through the column at a rate of 1-2 ml/min or under gravity.
10. Prepare the elution solutions. Rinse each column under vacuum of 1-2 mm Hg:
    a. 2.0 ml distilled water (1x)
    b. 0.5 ml 0.01 M acetic acid (1x)
11. Dry columns under full vacuum (10-15 mm Hg) for 5 minutes. Add 100 µl of methanol. Dry columns under full vacuum (10-15 mm Hg) for 2 minutes.
12. Remove the top of the vac-elut and set aside. Be careful not to disturb any columns.
13. Rinse out the canister and dry. Place rack with labeled (13 x 100 mm) acid/neutral fraction tubes into vac-elut. Place the top back on vac-elut ensuring that the tubes are in the collecting position.
14. Add 4 ml of the elution solution (acetone/chloroform) and allow the elution solvent to pass through without vacuum. Aspirate to remove all of the elution solution from the SPE columns.
15. Remove the collected acid/neutral fraction tubes from the canister. Place rack with labeled (13 x 100 mm) basic fraction tubes into vac-elut. Place the top back on vac-elut ensuring that the tubes are in the collecting position.
16. Add 2 ml of the elution solution (ethyl acetate/ NH₄OH) and allow the elution solvent to pass through without vacuum. Aspirate to remove all of the elution solution from the SPE columns.
17. Evaporate the samples to approximately 100 µl under a stream of N₂ at 40°C. If sample dries completely it can be reconstituted in 100 µl of the elution solution.
18. Remove tubes from the heating module and allow samples to cool to room temperature.
20. Transfer to labeled autosampler vials with volume reducing inserts. Cap vials.

J. GC/MS Method and Parameters for Analysis

1. Analyze the batch by GC/MS using the FULLSCAN program
   a. Method: TOXSCR.M

K. Order for Batch Analysis

The order of analysis:

1. blank blood (acid/neutral)
2. blank blood (basic)
3. case samples (acid/neutral) followed by the (basic) fraction
4. SPE test mix (acid/neutral)
5. SPE test mix (basic)
   a. Solvent wash and blanks: acetone
L. **Data Interpretation**
   In order for the quantitative values to be reported, the following quality control criteria should be met:
   
   1. Internal standards must be present.
   2. There shall be no presence of any significant drug other than the internal standard in the blank blood.
   3. All of the compounds in the SPE test mix should be identifiable.
   4. At the discretion of the analyst, a library match may be made and reported as a presumptive finding or a positive screen by GC/MS.

I. Title

COCAINE AND BENZOYLECGONINE IDENTIFICATION AND QUANTITATION IN BLOOD

A. SAFETY

SAFETY WARNING!

Methylene chloride is a suspected human carcinogen. Ammonium hydroxide and hydrochloric acid are caustic reagents. Human blood is a biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items are required while using this procedure:

1. lab coat/protective clothing
2. protective gloves
3. safety glasses
4. Safety Data Sheets for more information.

B. PRINCIPLE

Cocaine and Benzoylecgonine are recovered from blood by a solid phase extraction procedure using Cocaine-D3 and Benzoylecgonine-D3 as internal standards. Identification and quantitation is by gas chromatography/mass spectrometry.

C. SPECIMEN REQUIREMENT

Two milliliters (2 mL) of sample is used for the analysis.

D. DETECTION LIMIT

The limit of detection for this procedure is 10 ng/mL for Cocaine and Benzoylecgonine.

E. QUANTITATION LIMIT

The analytical limit of quantitation for this procedure is 20 ng/mL for Cocaine, Benzoylecgonine.

The reporting limit of quantitation for this procedure is 20 ng/mL for Cocaine, Benzoylecgonine. The reporting limit of quantitation for Benzoylecgonine can be raised to 50 ng/mL.

F. LINEAR RANGE

The linear range has been established from 10-5,000 ng/mL for Cocaine and Benzoylecgonine.

G. CARRYOVER

No carryover is present at10,000 ng/mL.

H. EQUIPMENT

This procedure uses the following laboratory equipment and supplies:

1. 16 x 125 mm disposable glass culture tubes with screw caps
2. 13 x 100 mm disposable glass tubes with Teflon lined caps
3. volumetric flasks
4. plastic and glass transfer pipettes
5. 20-200 µL pipettor and disposable pipette tips
6. 2-20 µL pipettor and disposable pipette tips
7. 500-2500 µL pipettor and disposable pipette tips
8. 500-5000 µL pipettor and disposable pipette tips
9. 100-1000 µL pipettor and disposable pipette tips
10. repeat pipettor and disposable tips (1.25 mL, 2.5 mL, 5 mL, 50 mL)
11. autosampler vials with volume reducing inserts and crimp caps
12. vortex mixer (Thermolyne or equivalent)
13. specimen rocker (LabQuake Shaker or equivalent)
14. centrifuge (IEC Centra-4B or equivalent)
15. solid phase extraction columns, Varian Bond Elute Certify
16. solid phase extraction manifold (vac-elut)
17. evaporator/heating module
18. gas chromatograph/mass spectrometer

I. CHEMICALS

This procedure uses the following chemicals:

1. ammonium hydroxide, concentrate, reagent grade **CAUTION IRRITANT**
2. methylene chloride, reagent grade
3. methanol, reagent grade
4. isopropanol, reagent grade
5. sodium acetate
6. glacial acetic acid, reagent grade
7. PFPA (Pentafluoropropionic anhydride)
8. HFIP (1,1,1,3,3,3-Hexafluoro-2-propanol)
9. hydrochloric acid, concentrate, reagent grade **CAUTION IRRITANT**
10. dry nitrogen gas (N\textsubscript{2})
11. ethyl acetate, HPLC grade
12. acetonitrile, HPLC grade
13. zinc sulfate hydrate

J. STANDARDS

All standards, calibrators, and controls are prepared in appropriate volumetric flasks, utilizing calibrated pipettes. Directions and volumes used for preparation of calibrators are given for an assumed concentration (e.g. listed in catalog). The certified concentration, provided by the manufacturer on the certificate of analysis (COA), should be used in the preparation of solutions from an ampule. The volumes needed to achieve the final concentration of the calibrator or control should be calculated using the certified concentration from the certificate, not an assumed concentration for the ampule.

1. **Stock standards:**
   a. stock internal standard: 10 µg/mL cocaine-D3/benzoylecgonine-D3 in methanol
      
      \textit{Prep: 100 µg/mL ampule cocaine-D3 standard, 100 µg/mL ampule benzoylecgonine-D3 standard, dilute to 10 mL with methanol}

   b. stock calibration standard: 100 µg/mL cocaine in acetonitrile
      
      \textit{Prep: Draw 1 ml of 1 mg/ml ampule cocaine standard, dilute to 10 mL with acetonitrile}
c. stock calibration standard: 100 µg/mL benzoylecgonine in methanol
   Prep: Draw 1 ml of 1 mg/ml ampule benzoylecgonine standard, dilute to 10 mL with methanol

d. stock QC standard: 100 µg/mL cocaine in methanol
   Prep: Draw 1 ml of 1 mg/ml ampule cocaine standard, dilute to 10 mL with methanol

e. stock QC standard: 100 µg/mL benzoylecgonine in methanol
   Prep: Draw 1 ml of 1 mg/ml ampule benzoylecgonine standard, dilute to 10 mL with methanol

2. Working standards:
   a. working internal standard: 1 µg/mL cocaine-D3/benzoylecgonine- D3 in distilled water
      Prep: 1 mL of stock internal standard, dilute to 10 mL with distilled water

   b. working cocaine calibration standard: 10 µg/mL cocaine in distilled water
      Prep: 1 mL of stock calibration standard, dilute to 10 mL with distilled water (note: the cocaine and the
      benzoylecgonine working standard can be made together if the blood standards are going to be made in
      the same concentration)

   c. working benzoylecgonine calibration standard: 10 µg/mL benzoylecgonine in distilled water
      Prep: 1 mL of stock calibration standard, dilute to 10 mL with distilled water (see note above)

   d. working QC standard: 10 µg/mL cocaine/benzoylecgonine in distilled water
      Prep: 1 mL of each stock QC standard, dilute to 10 mL with distilled water

3. Calibrators and Quality Controls:
   a. 0.020 COC/0.050 BE µg/mL calibrator
      Prep: 20 µL working of cocaine calibration standard, and 50 µL working Benzoylecgonine working
      calibration standard, dilute to 10 mL with blank blood (if the LOQ for BE is 0.020 µg/mL see note below)

   b. 0.250 COC/0.500 BE µg/mL calibrator
      Prep: 250 µL working cocaine calibration standard, and 500 µL of Benzoylecgonine working calibration
      standard, dilute to 10 mL with blank blood

   c. 0.500 COC/1.500 BE µg/mL calibrator
      Prep: 0.500 mL working cocaine calibration standard, and 1.500 mL of Benzoylecgonine working
      calibration standard, dilute to 10 mL with blank blood

   d. 1.000 COC/2.500 BE µg/mL calibrator
      Prep: 1.0 mL working cocaine calibration standard, and 2.500 mL of Benzoylecgonine working calibration
      standard, dilute to 10 mL with blank blood

   e. low QC: 0.200 µg/mL
      Prep: 200 µL working QC standard, dilute to 10 mL with blank blood

   f. high QC: 0.750 µg/mL
      Prep: 750 µL working QC standard, dilute to 10 mL with blank blood
      Note: The LOQ for Benzoylecgonine can be run at 0.020 µg/mL as opposed to 0.050 µg/mL

      Note: It is within the discretion of the toxicologist of whether to run a high or low QC. However, a high
      and low QC is necessary when running a large batch of case samples.

K. REAGENTS

Reagents can be prepared before the extraction day. The elution solution must be made the day of analysis.

1. sodium acetate buffer, pH 6.0
   Prep: See Reagent Preparation

2. 0.1M hydrochloric acid
   Prep: See Reagent Preparation

3. 5% zinc sulfate in 50% methanol
   Prep: See Reagent Preparation

4. elution solution (8:2) methylene chloride/isopropanol with 2% NH₄OH
   Prep: 20 mL isopropanol to a 100 mL volumetric flask and QS with methylene chloride. Invert flask several
   times to mix. Remove 2 mL of the solution. Add 2 mL concentrated ammonium hydroxide. Cover and sonicate
   for 10 minutes.

L. EXTRACTION
The target drugs are extracted from the blood samples using the following procedure:

1. Prepare and label disposable (16 x 125 mm) culture tubes for each calibrator, quality control, sample, and blank blood.
2. Add 2.0 mL of calibrators, quality control, blank and case samples to be analyzed into the corresponding labeled tube.
3. Add 300µL of working internal standard to each tube (the internal standard may be added before the calibrators, quality control, samples, and blank blood).
4. Add 4.0 mL of 5% zinc sulfate in 50% methanol to each tube. Vortex quickly, cap tubes, and rock for 10-15 minutes.
5. Centrifuge at 3000 rpm for 10-15 minutes.
6. Place the solid phase extraction columns on the vac-elut.
7. Rinse each column under vacuum of 1-2 mm Hg (It is important that the columns do not go dry prior to addition of the sample):
   a. 3.0 mL methanol (1x)
   b. 2.0 mL pH 6.0 acetate buffer (1x)
      (Turn off the vacuum. Add 2.0 mL pH 6.0 acetate buffer in preparation of sample application.
8. Add zinc sulfate solution from each blood tube to the appropriately labeled column (let the zinc sulfate equilibrate with the pH 6.0 buffer for a couple minutes).
9. Allow the samples to pass through the column at a rate of 1-2 mL/min or under gravity.
10. Prepare the elution solution.
11. Rinse each column under vacuum of 1-2 mm Hg:
   a. 3.0 mL distilled water (1x)
   b. 3.0 mL 0.1 M HCl (1x)
   (Add methanol to just below the top of each column and pass through under vacuum of 10-15 mm Hg.
12. Dry columns under full vacuum (10-15 mm Hg) for 5 minutes. It is important that the columns are dry!
13. Remove the top of the vac-elut and set aside. Be careful not to disturb any columns.
14. Rinse out the canister and dry. Place rack with labeled (13 x 100 mm) culture tubes into vac-elut. Place the top back on vac-elut ensuring that the tubes are in the collecting position.
15. Add 3 mL of the elution solution and allow the elution solvent to pass through the column without vacuum.
16. Evaporate the samples to dryness under a stream of \( \text{N}_2 \) at 40°C.
17. Remove tubes from the heating module and allow samples to cool to room temperature. Add 50 \( \mu \)L PFPA and 50 \( \mu \)L HFIP to each tube.
18. Cap tubes with Teflon lined caps and vortex 10 seconds.
19. Heat at approximately 70-75°C for 25 minutes. Remove and cool to room temperature.
20. Evaporate the samples to dryness under a stream of \( \text{N}_2 \) at 40°C (do not let the samples bake).
21. Reconstitute with 100 \( \mu \)L of Ethyl Acetate and vortex 10 seconds.
22. Transfer to labeled autosampler vials with volume reducing inserts. Cap vials.

M. GC/MS ANALYSIS

Analyze the batch by GC/MS using the SIM program.

N. METHOD PARAMETERS

Load the following method for this analysis:

1. method: coscsim.m

   Ions monitored
   Benzoyllecgonine 318, 334, 439
   Benzoyllecgonine D3 321, 337
O. **BATCH ANALYSIS**

The order of analysis:

1. blank blood
2. LOQ
3. LOW
4. MED
5. HIGH
6. case samples
7. QC

If running more than ten case samples, an additional QC should be added for every ten additional case samples. For example: If running 11-20 case samples, one QC should be run before the samples and one after the samples.

Solvent wash and blanks: ethyl acetate, reagent grade

P. **DATA INTERPRETATION**

1. In order for the quantitative values to be reported, the following quality control criteria should be met:
   a. coefficient of determination, “$r^2$”, of .96 or higher using the following models:
      i. Cocaine, quadratic with equal weighting
      ii. Benzoylecgonine, quadratic with inverse of concentration weighting
   b. ion ratios within specified range +/- 20% (absolute)
   c. standard and QC quantitation values within +/- 20% of known value
   d. retention times +/- 3% of calibration standard retention times
   e. sufficient peak shape and resolution
   f. blank/negative control has a quantitative value less than LOQ

Q. **Qualitative Reporting**

1. If any of the QC quantitative values is not within +/- 20% of known value, the sample may be reported qualitatively. To report a sample as positive (+) the calculated concentration from Chemstation for the sample must be greater than the run cutoff (lowest concentration standard). The following criteria must also be met:
   a. ion ratios within specified range +/- 20% (absolute)
   b. retention times +/- 3% of calibration standard retention times
   c. sufficient peak shape and resolution
   d. blank/negative control has a quantitative value less than lowest concentration standard

END OF DOCUMENT
I. OPIATE AND KETO-OPIATE IDENTIFICATION AND QUANTITATION IN BLOOD

A. SAFETY - SAFETY WARNING!
Methylene chloride is a suspected human carcinogen. Ammonium hydroxide is a caustic reagent. Human blood is a biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items are required while using this procedure:
   1. lab coat/protective clothing
   2. protective gloves
   3. safety glasses/hood
   4. Safety Data Sheets for more information.

B. PRINCIPLE
Seven opiates are recovered from blood by a solid phase extraction procedure using deuterated internal standards. Identification and quantitation is by gas chromatography/mass spectrometry.

C. SPECIMEN REQUIREMENT
1. Two milliliters (2 mL) of sample is used for the analysis.
   a. If a smaller sample size is required, see TOX.41 - Performing Extractions. For diluted samples, blank blood should be added to give a total volume of 2 mL so the acetonitrile evaporation volume remains the same.

D. DETECTION LIMIT
1. The limit of detection for this procedure is 10 ng/mL for Codeine, Morphine, Hydrocodone, Oxycodone, Hydromorphone and Oxymorphone; 5 ng/ml for 6-acetylmorphine.

E. QUANTITATION LIMIT
1. The analytical limit of quantitation for this procedure is 20 ng/mL for Codeine, Morphine, Hydrocodone, Oxycodone, Hydromorphone and Oxymorphone; 10 ng/ml for 6-acetylmorphine.
2. The reporting limit of quantitation for this procedure is 20 ng/mL for Codeine, Morphine, Hydrocodone, Oxycodone, Hydromorphone and Oxymorphone; 10 ng/ml for 6-acetylmorphine.

F. LINEAR RANGE
1. The linear range has been established from 10-2,000 ng/mL for Codeine, Hydrocodone, Oxycodone, Hydromorphone, 10-1000 ng/ml for Morphine and Oxymorphone, and 5-1000 ng/ml for 6-acetylmorphine. (Range attempted: 5-2,000 ng/mL for six opiates and 2.5-1000 ng/ml for 6-acetylmorphine)

G. CARRYOVER
1. No significant carryover is present at 10,000 ng/mL.

H. EQUIPMENT
This procedure uses the following laboratory equipment and supplies:
   1. 16 x 125 mm disposable glass culture tubes with screw caps
   2. 13 x 100 mm disposable glass tubes with Teflon lined caps
   3. volumetric flasks
   4. plastic transfer pipettes
   5. 2-20 µL pipettor and disposable pipette tips
6. 20-200 µL pipettor and disposable pipette tips
7. 10-1000 µL pipettor and disposable pipette tips
8. 500-2500 µL pipettor and disposable pipette tips
9. repeat pipettor and disposable tips (1.25 mL, 2.5 mL, 5 mL, 50 mL)
10. autosampler vials with volume reducing inserts and crimp caps
11. vortex mixer (Thermolyne or equivalent)
12. specimen rocker (LabQuake Shaker or equivalent)
13. centrifuge (IEC Centra-4B or equivalent)
14. solid phase extraction columns, Varian Bond Elute Certify
15. solid phase extraction manifold (vac-elut)
16. evaporator/heating module
17. gas chromatograph/mass spectrometer

I. CHEMICALS
This procedure uses the following chemicals:
1. ammonium hydroxide, concentrate, reagent grade CAUTION IRRITANT
2. methylene chloride, reagent grade
3. methanol, reagent grade
4. isopropanol, reagent grade
5. sodium acetate
6. glacial acetic acid, reagent grade
7. Propionic Anhydride, greater than or equal to 99% (see comment before References)
8. Methoxylamine Hydrochloride
9. hydrochloric acid, concentrate, reagent grade CAUTION IRRITANT
10. dry nitrogen gas (N₂)
11. ethyl acetate, HPLC grade
12. acetonitrile, HPLC grade
13. pyridine, HPLC grade
14. potassium carbonate
15. potassium bicarbonate

J. STANDARDS
All standards, calibrators, and controls are prepared in appropriate volumetric flasks, utilizing calibrated pipettes. Stock standards may be made individually or analytes may be combined.
Directions and volumes used for preparation of calibrators are given for an assumed concentration (e.g. listed in catalog). The certified concentration, provided by the manufacturer on the certificate of analysis (COA), should be used in the preparation of solutions from an ampule. The volumes needed to achieve the final concentration of the calibrator or control should be calculated using the certified concentration from the certificate, not an assumed concentration for the ampule. Ampule concentrations may also change due to vendor availability or laboratory preference and a stock solution may not need to be prepared.

1. Stock standards: Stock standards may be stored in freezer.
   a. stock internal standard: 10 µg/mL hydrocodone-D6/codeine-D6/oxycodone-D6/hydromorphone-D6/6-MAM-D6/morphine-D6/oxymorphone-D3
      Prep: Draw 1 ml of each 100 µg/mL ampule and dilute to 10 mL with methanol
   b. stock calibration standard: 100 µg/mL 6-MAM in acetonitrile
      Prep: Draw 1 ml of 1 mg/ml ampule 6-MAM standard, dilute to 10 mL with acetonitrile
c. stock calibration standard: 100 µg/mL codeine/morphine/hydrocodone/oxycodone/hydromorphone/oxymorphone in methanol
   Prep: Draw 1 ml of 1 mg/ml ampule of each standard, dilute to 10 mL with methanol

d. stock QC standard: 100 µg/mL codeine/morphine/hydrocodone/6-MAM/oxycodone/hydromorphone/oxymorphone in methanol
   Prep: Draw 1 ml of 1 mg/ml ampule of each standard, dilute to 10 mL with methanol

2. **Working standards:**
   a. working internal standard: 1 µg/mL hydrocodone-D6/codeine-D6/oxycodone-D6/hydrocodone-D6/6-MAM-D6/morphine-D6 in distilled water
      Prep: 0.5 mL of (each) stock internal standard, dilute to 5 mL with distilled water
   b. working calibration standard: 5 µg/mL codeine/morphine/hydrocodone/oxycodone/hydromorphone/oxymorphone, 2.5 µg/mL 6-MAM in distilled water
      Prep: 0.50 mL of each stock calibration standard, 0.25 mL 6-MAM and dilute to 10 mL with distilled water
   c. working QC standard: 10 µg/mL codeine/morphine/hydrocodone/oxycodone/hydromorphone/oxymorphone, 5 µg/mL 6-MAM in distilled water
      Prep: 0.5 mL of each stock QC standard, 0.25 ml 6-MAM and dilute to 5 mL with distilled water

3. **Calibrators and Quality Controls:**
   a. low QC: 0.200 µg/mL opiate/0.100 µg/mL 6-MAM calibrator
      Prep: 40 µL working calibration standard, dilute to 10 mL with blank blood
   b. high QC: 0.400 µg/mL opiate/0.200 µg/mL 6-MAM calibrator
      Prep: 400 µL working QC standard, dilute to 10 mL with blank blood
   c. high morphine standard: 2.0 µg/mL
      Prep: 200 µL of 100 µg/mL morphine standard, add 1 ml DI water, dilute to 10 mL with blank blood (used to verify propionic anhydride)

   Note: It is within the discretion of the analyst whether to use a high or low QC. A high and a low QC is necessary when analyzing 11-20 case samples.

K. **Reagents**
   Reagents can be prepared before the extraction day. The elution and wash solutions must be made the day of analysis.
   1. carbonate buffer, pH 9.0
      Prep: See Reagent Preparation
   2. 0.1M acetate buffer, pH 4.0
      Prep: See Reagent Preparation
   3. 10% Methoxylamine Hydrochloride in DI water
      Prep: See Reagent Preparation
   4. organic wash solution (8:2) methylene chloride/isopropanol
      Prep: 20 mL isopropanol to a 100 mL volumetric flask and QS with methylene chloride. Invert flask several times to mix.
   5. elution solution (8:2) methylene chloride/isopropanol with 2% NH₄OH
      Prep: 20 mL isopropanol to a 100 mL volumetric flask and QS with methylene chloride. Invert flask several times to mix. Transfer solution to bottle with cap. Remove 2 mL of the solution. Add 2 mL concentrated ammonium hydroxide. Cover and sonicate for 10 minutes.
**L. Extraction Procedure**

The target drugs are extracted from the blood samples using the following procedure:

1. Prepare and label disposable (16 x 125 mm) culture tubes for each calibrator, quality control, sample, and blank blood.
2. Add 2.0 ml of calibrators, quality control, blank and case samples to be analyzed into the corresponding labeled tube.
3. Add 100 µl of working internal standard to each tube.
4. Add 2.0 mL of acetonitrile. Vortex quickly.
5. Add additional 2.0 ml acetonitrile. Vortex.
6. Cap tubes and rotate for 10 minutes.
7. Centrifuge at 3000 rpm for 10-15 minutes.
8. Add 100 µl 10 % Methoxylamine solution to labeled 13x100 tubes.
9. Transfer acetonitrile from each tube to corresponding 13x100 tubes. Vortex.
10. Evaporate Acetonitrile under a stream of N\textsubscript{2} at 40-50\degree C, 20 psi. IMPORTANT: Excess acetonitrile may reduce recovery of analytes. Samples should not dry down completely, but should be less than 2 mL in volume.
11. Add 3 mL pH 9.0 buffer to each sample and vortex.
12. Place the solid phase extraction columns on the vac-elut.
13. Rinse each column under vacuum of 1-2 mm Hg (It is important that the columns do not go dry prior to addition of the sample):
   a. 3.0 ml methanol (1x)
   b. 2.0 ml pH 9.0 carbonate buffer (1x)
15. Transfer samples from each blood tube to the appropriately labeled column. Allow the samples to pass through the column under gravity.
16. Prepare the elution solution and wash solution.
17. Rinse each column under vacuum of 1-2 mm Hg:
   a. 2.0 ml distilled water (1x)
   b. 2.0 mL pH 4.0 buffer (1x)
18. Add 3 mL methanol to each column and pass through under vacuum of 10-15 mm Hg.
19. Dry columns under full vacuum (10-15 mm Hg) for 5-10 minutes. It is important that the columns are dry!
20. Add 2 mL organic wash solution. Rinse under vacuum of 1-2 mm Hg.
21. Dry columns under full vacuum 2-5 minutes.
22. Remove the top of the vac-elut and set aside. Be careful not to disturb any columns.
23. Rinse out the canister and dry. Place rack with labeled (13 x 100 mm) culture tubes into vac-elut. Place the top back on vac-elut ensuring that the tubes are in the collecting position.
24. Add 3 ml of the elution solution and allow the elution solvent to pass through the column without vacuum.
25. Evaporate the samples to dryness under a stream of N\textsubscript{2} at 40-50\degree C.
26. Remove tubes from the heating module and allow samples to cool to room temperature. Add 50 µL pyridine and 50 µL Propionic Anhydride to each tube.
27. Cap tubes with Teflon lined caps and vortex for 10 seconds.
28. Heat at approximately 120\degree C for 30 minutes.
29. Remove samples and evaporate to dryness under a stream of N\textsubscript{2} at 60\degree C.
30. Reconstitute with 100 µl ethyl acetate.
31. Transfer to labeled autosampler vials with volume reducing inserts. Cap vials.

M. GC/MS Method and Parameters for ANALYSIS

1. Analyze the batch by GC/MS using the SIM program.
   a. Method: BLOPISIM.M

2. Ions Monitored
   - Hydrocodone-D6   334, 303
   - Hydrocodone     328, 297, 329
   - Codeine-D6       288, 361
   - Codeine          282, 355, 298
   - Oxycodone-D6     406, 349
   - Oxycodone        400, 343, 295
   - Hydromorphone-D6 320, 376
   - Hydromorphone    314, 370, 283
   - 6-MAM-D6         333, 389
   - 6-MAM            268, 383, 324
   - Oxymorphone-D3   389, 445
   - Oxymorphone      386, 442, 369
   - Morphine-D6      347, 403
   - Morphine         341, 397, 324

N. Order of Batch Analysis

1. blank blood
2. LOQ
3. LOW
4. MED
5. HIGH
6. case samples
7. QC
   a. If analyzing more than ten case samples, an additional QC should be added for every ten additional case samples. For example: If analyzing 11-20 case samples, one QC can be placed prior to case samples and one placed after the samples.
   b. Solvent wash and blanks: ethyl acetate, reagent grade

O. Data Interpretation

1. In order for the quantitative values to be reported, the following quality control criteria should be met:
   a. calibration curve with \( r^2 \) value of .96 or higher using the quadratic model with inverse of concentration weighting
   b. ion ratios within specified range +/- 20% (absolute)
   c. standard and QC quantitation values with +/- 20% of known value
   d. retention times +/- 3% of calibration standard retention times
   e. sufficient peak shape and resolution
   f. blank/negative control has a quantitative value less than LOD

P. Qualitative Reporting

1. If any of the QC quantitative values is not within +/- 20% of known value, the sample may be reported qualitatively. To report a sample as positive (+) the calculated concentration from Chemstation for the sample must be greater than the run cutoff (lowest concentration standard). The following criteria must also be met:
   a. ion ratios within specified range +/- 20% (absolute)
   b. retention times +/- 3% of calibration standard retention times
c. sufficient peak shape and resolution
d. blank/negative control has a quantitative value less than lowest concentration standard

Q. Comments

1. Each lot of Propionic Anhydride should be verified for purity with a high concentration of morphine (conc. higher than the highest standard - 2µg/ml). The morphine standard is verified directly without carrying the standard through the extraction procedure. The lot is acceptable for use if 6-MAM is below LOQ in the presence of the high morphine concentration.

2. In unpreserved blood, heroin will rapidly degrade to 6-MAM. 6-MAM will degrade more slowly to morphine. Sodium fluoride will slow the degradation of these compounds and should be used when making standards.

END OF DOCUMENT
I. Occasionally, it is necessary to send samples to laboratories outside the FSD (Forensic Services Division) to perform toxicology analyses. This may occur when the toxicology analysis is requested and the Laboratory cannot perform the analysis (OLA) or at the request of the defense (referee).

A. Referee Analysis:
   1. Referee analysis is analysis performed by an outside laboratory at the request of the defense or by court order.
      a. Typically, referee samples are those which are taken at the request of the defense to verify the accuracy of the blood/urine testing result; samples are sent to a laboratory designated by the defense.
      b. Occasionally, the laboratory may be asked to send out evidence which was not analyzed by the FSD; then the procedures for Referee Analysis would be followed.
   2. Follow the procedure in the Blood Alcohol Technical Unit Manual for Referee Analysis (BA.37)

B. Subcontracting or OLA Analysis:
   1. When analysis is requested that the laboratory is unable to perform, the sample may be sent out to a competent outside laboratory for analysis. This may occur due to the laboratory's inability to perform the analysis, inadequate staffing levels, or other unforeseen reasons. Samples are typically sent to NMS Labs; however, other competent laboratories may be used once their accreditation has been evaluated.
      a. When an outside laboratory is utilized, the report shall reflect that the sample was sent to an outside laboratory for analysis.
      b. The Crime Lab is responsible for selecting an outside laboratory unless the customer specifically requests that the sample be sent to a laboratory of the their choosing.
      c. A list of competent outside laboratories will be maintained along with documentation of competence and checked yearly.
         i. Compliance with ISO 17025 is considered a demonstration of competence.
            1. Scope of testing will be verified with current accreditation.
         ii. Competence may also be determined by evaluation of accreditations, licensure, participation in proficiency testing programs, and participation in professional organizations.

C. Procedure for Sending OLA Samples:
   1. Materials Needed for Mailing OLA Samples:
      a. NMS box mailer
      b. NMS box seals
      c. Absorbent sheets
      d. NMS Analysis Requisition forms, either electronic or printed copy
      e. NMS ziplock plastic bag
      f. FedEx mailer
      g. FedEx US Airbill form
      h. Bubble-wrap envelopes for containers
         i. Address labels – Small (Avery 5167) (if splitting evidence)
      j. Blank CCSO Blood Sample for Alcohol/Drug Analysis Envelopes (if splitting evidence)
      k. Evidence Tape (if splitting evidence)
      l. CCSO barcodes (if splitting evidence)
m. Vials (if splitting evidence)

2. Identify case sample(s) that require OLA
   a. Samples to be sent out are identified following screening by the Toxicology Unit, or by specific request made by the Agency.
   b. LIMS reports are available to help identify cases
      i. Tox instructions → Admin-Crystal Reports → Generate Reports → Muir Tox Unit → Tox Pending. Print to Screen. Print page with OLA-designated entries.

3. Identify and split samples as required
   a. Collect evidence from storage location (Example: Muir-Refrigerator-Toxicology)
   b. Transfer the evidence to yourself, in LIMS, from storage location.
   c. For non-split OLA's, proceed to paragraph I.C.4.
   d. For Split Tox OLA, the Toxicology Unit typically removes a vial from a set of vials or removes a portion of blood from a vial into an empty, clean vial
      i. Itemize evidence
         1. If more than one full, sealed vial of blood is available, the sealed vial can be sent to NMS instead of splitting a previously opened vial. When possible, retain one unopened vial of blood for referee purposes.
         2. If splitting a portion of blood from gray top vial into another gray top vial
            1. Split the evidence sample according to the amount needed by NMS (e.g. 2 mL, etc.) from the original container into an empty vial. Tape seal the vial. Date and initial the tape seal.
            2. Date and initial the vial from which the sample was taken.
            3. Tape seal and initial and date the vial containing the split sample.
   3. Open the case in LIMS
      1. Requests Tab → right click toxicology request → edit findings → right click on evidence → itemize evidence
      2. Add the appropriate description.
         1. Blood vial that was separated from evidence envelope and sent out (entire vial sent):
            1. Split one tape sealed grey top vial with blood
         2. Blood that was split from a grey top vial and put into an empty grey top vial, sealed and sent out:
            1. Split a portion of grey top vial with blood
         3. Urine that was split from the urine jar and put into a black screw cap vial and sent out:
            1. Split one tape sealed grey top vial with urine
         4. Liver/Gastric/Other that was split from a jar into a bottle and sent out:
            1. Split a portion of liver into a white top bottle
         5. Vitreous vial that was separated from evidence envelope and sent out (entire vial sent):
            1. Split one red top vial with vitreous
      3. Bar Code for sub items numbers → 0
      4. Click on blue barcode icon to register a barcode → scan a barcode → click apply. Exit screen.
      5. Click on 3 ellipses and add number of containers → Click OK → Click Apply → Click Close
      6. Evidence Type: pick appropriate description (eg. blood, Coroner blood, Urine, etc.).

4. Create worklist
   a. Analysis → Create worklist → Division Section/Unit: Toxicology Unit (optional), Service: Toxicology Analysis (optional), Assigned to: Unit Toxicology → Scan Evidence and/or move cases listed on the printed report to the lower part of the screen → Uncheck Create Sequence File → Create Worklist → Print

5. Print labels (for split evidence only)
   a. Print labels: (Avery 5167) Labels are not needed when not opening evidence envelopes
i. Administration → Crystal Reports → Generate Reports → Worklist Labels → Print → Screen → EvidDate (11/20/08), Color (white, white), # of rows to skip, ShowName (true), Worklist Barcode (scan barcode from worklist)

b. Initial labels

c. Affix laboratory label to split samples; place tape over label

6. NMS Testing Request Forms

a. Online Request Submission (Full instructions are available in Appendix INSDAT.01)

i. Log into NMS web portal at portal.nmslabs.com.

   1. The NMS web portal will lock the account after (3) incorrect attempts to logon. Contact the NMS Help Desk to unlock the account.

   2. Do not use the web browser's back and forward buttons to navigate between application windows. Instead, use the tabs and links provided within the application.

ii. From the Orders Screen, click the New Case button

iii. The Case Info window opens with a Requisition Type option.

   1. The Requisition Type will default to the type of work our account typically sends for testing.

   2. If changing the Requisition Type is necessary, select the appropriate designation from the drop-down menu. Requisition Type options include: Postmortem, Police, or Other.

iv. The Demographic section contains the patient identifying information related to the case. Complete the fields using the information available to you from LIMS or the evidence envelope.

   1. Incident Number - Enter the laboratory case number with the request number.

   2. First Name - Enter the first name of the decedent, subject, or patient.

   3. Middle Initial (optional) - Enter the middle initial of the decedent, subject, or patient.

   4. Last Name - Enter the last name of the decedent, subject, or patient.

   5. Decedent Name - This field is a concatenation of the First Name, Middle Initial, and Last Name field. If no entry is given then it is defaulted to NP (Not Provided).

v. The Case Questions section

   1. Leave the Do Not Consume and Do Not Micro boxes unchecked.

   2. Click the Return Samples box.

vi. The Requisition section contains questions specific to the type of requisition. The fields will vary between Postmortem and Police requisitions.

   1. Officer's Name (required) - Enter the name of the requesting officer.

   2. Department Jurisdiction (County) (required) - Enter Contra Costa County.

   3. Enter Special Instructions, as necessary.

   4. When all information on the page is correct, click the Next button.

vii. Sample details section

   1. Select the sample matrix (required).

   2. Select the matrix/specimen source as necessary.

      1. Identify source indicated on evidence envelope, if indicated.

      2. If submitting hospital vials, indicate source as "Hospital"

   3. Enter the Collection Date/Time if available.

viii. Selected Tests section

   1. Add Favorite Test - This is a quick selection of frequently ordered tests. (Note: if you would like additional tests added to this quick link, contact NMS Client Support.)

      1. As applicable, select favorite/most requested tests from the drop down.

      2. If necessary, search the catalog by entering the test code or analyte.

          1. The search will return a list of matching tests. Select the desired test by clicking the + button.
1. Additional information related to the tests is available by clicking the i button.

2. To remove a test, click the x located to the right of the Test Description.

2. When all desired tests have been selected, click the Next button.
   1. If the Label Auto Print setting in the NMS portal is set to Sample Complete, the labels will print after the Next button is clicked.

ix. After clicking Next, the Samples window will open.
   1. Click the Add New Samples option to add additional samples for the same decedent, subject, or patient. (Example: blood and urine both submitted from the same subject in a drug facilitated crime case.)
   2. If a modification to the sample or the associated test code is required, click the edit button.
   3. To remove a sample click the x button.
   4. To duplicate a sample, click the clipboard button.
   5. Click the Add to Cart button to add the Case to the Order.

x. You may have many cases on an order, or you may have one case per order.
   1. After clicking Next from the Samples page, the Orders window will open.
      1. The Cart reflects how many cases are on the order.
   2. Click the New Case button to add another case to the order.
      1. The New Case button will begin a new workflow for the second case's Patient Demographic, Samples and Test Codes.

xi. When all case and sample information has been entered and added to the Cart, click the Review button at the bottom of the Orders/Cart Tab screen to open the Order Review window. (Note: the Order Review is the last opportunity to make modifications to an order.)
   1. To edit the information on the case, click the Edit Case button.

xii. Click the Submit for Testing button to send the order electronically to NMS Labs.
    1. The Analysis Requisition and Chain of Custody form will auto-generate.
    2. If modifications are necessary after the Submit for Testing button has been clicked, contact the NMS Client Services Department.

xiii. Labels will be auto-printed if the Label Auto Print setting is set to Order Complete. (See Account Settings to configure printer.)
    1. An option to reprint the Requisition, Labels, or view the Order History is available.

xiv. Print the Analysis Requisition and Chain of Custody form.
    1. Complete the chain of custody portion of the form as you would on an envelope; see section I.C.8.c.
    2. Make a copy of the Analysis Requisition and Chain of Custody form. The original copy is sent to NMS. The copy is retained with the laboratory's records.

b. Manual NMS Requisition forms (Non-online submission)

i. Antemortem: Analysis Requisition and Property Receipt/Chain of Custody form. An electronic requisition form with instructions is stored on the Laboratory's shared drive.
   1. Provide subject name and lab number
   2. Provide additional information if known.
   3. Indicate desired analysis in the Test Request(s) section, include test code and analysis (example: 0960B-Cannabinoids Panel). Refer to NMS website (www.nmslabs.com) for codes of unknown/unusual tests. Requested analyses may be handwritten in the space marked "Other".
      1. Check lab notes for special instructions for requested analyses
   4. Indicate item number, quantity, and/or description of items in Specimen Type field
   5. Complete chain of custody on the NMS form.
      1. Indicate the item number
      2. Indicate date
3. Under Relinquished By: *Split (1) grey top vial with blood. Initial OR split portion from (1) grey top vial. Initials*

4. Under Received By: 

6. Attach a copy of NMS form to worklist.

ii. **Postmortem:** Analysis Requisition and Property Receipt/Chain of Custody form. An electronic requisition form with instructions is stored on the Laboratory's shared drive.

1. Provide decedent name.

2. Provide additional information if known.

3. Indicate Specimen Collection Date & Time (if known). Identify Specimen Type and Specimen Source submitted (peripheral, liver, etc.).

4. Indicate item number, quantity, and/or description of items in "Container Labeled as" field

5. Indicate the desired analysis from the list provided on the form. If the desired test is not included on the list, refer to NMS website (www.nmslabs.com) for codes of unknown/unusual tests. Requested analyses may be handwritten in the space marked "Other". Include any special instructions such as Screen heart, Quant peripheral.

6. Complete chain of custody

1. Indicate date

2. Under Relinquished By: *Sent entire ziplock bag and contents. Initial OR Split (1) grey top vial with blood. Initials*

3. Under Received By: 

7. Attach a copy of NMS Requisition form to worklist

7. **Enter OLA information in LIMS:**

a. For Non-Split Tox OLA, the Toxicology Unit does not open the evidence i.e. DFSA, Coroner’s

i. **Ensure that a legible image of all envelopes being sent is captured in LIMS**

ii. If entering information online and printing labels, affix NMS generated labels to the following:

1. Evidence Envelope

2. NMS ziplock plastic bag

3. OLA Worklist

iii. Open the case in LIMS

iv. Evidence Tab → Click on the evidence → Click on the 3 ellipses, indicate in the Toxicology Notes: “mm/dd/yy Evidence was not opened. Initials”. Indicate in the Toxicology Requested Drugs the type of test requested by the Coroner (e.g. “Acid/Neutral/Basic Drug Screen per the Coroner. initials”). Also include any special instructions (e.g. “Screen heart, quant peripheral”). Indicate the number of containers: enter number of vials and/or jars → Apply → OK.

v. Request Tab → Right click on the Tox Analysis → Click on Edit Findings → Right click on evidence → Add result → In the Screens box, scroll to OLA → Click on the move right arrow → Click on Positive (ensure the confirmation box is checked) → Click on the 3 ellipses indicate: “mm/dd/yy Sent entire envelope to NMS for tttt (nnnnxx), initials. NMS Accession Number NMSxxnnnn and FedEx tracking number nnnn-nnnn-nnnn. → Close → Apply → OK.

vi. Log time spent on OLA preparation in LIMS: Request Tab → Right click on the Tox Analysis → Activities → Click "+" button → Service: Toxicology Outside Lab Analysis → Activity: Tox OLA → Enter time spent on OLA → change quantity to "1" → Notes: OLA to NMS → Click OK → Click Close → Click Apply → Click OK.

vii. Complete the chain of custody on the envelope.

<table>
<thead>
<tr>
<th>Received From:</th>
<th>Received By:</th>
<th>Date:</th>
</tr>
</thead>
<tbody>
<tr>
<td>EVID</td>
<td>Your Name</td>
<td>11/06/08</td>
</tr>
<tr>
<td>Sent entire envelope. initials</td>
<td>Via NMS FedEx</td>
<td>11/06/08</td>
</tr>
</tbody>
</table>

viii. In LIMS, transfer the evidence from yourself to NMS, Via FedEx
1. Agency Representative:
   1. Agency: National Medical Services
   2. Representative: National Medical Services

ix. Place the envelope into the NMS plastic bag and place the copy of the NMS Analysis Requisition and Chain of Custody form (if filling electronically) in the pocket of the NMS bag.

x. Place NMS bag into an NMS box mailer. Seal the box with seals if the box is full or if there are no other non-split evidence to go to NMS.

xi. Skip to Step 10 "Fill-out the FedEx US Airbill Form".

b. For Split Tox OLA

i. Ensure the following labels are affixed to the vial containing the split sample.
   1. The laboratory label printed from LIMS; tape over label
   2. The NMS label (if submitting information electronically)

ii. Place split vial into bubble wrap.

iii. Complete the chain of custody on the parent evidence envelope.

<table>

<td>OR Split a portion of grey top vial Initials</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Analyst name</td>
<td>EVID</td>
<td>11/06/08</td>
</tr>
</tbody>
</table>

iv. Affix the NMS labels with Accession Number on the following:
   1. OLA Worklist
   2. Split sample
   3. Blank CCSO Blood Sample for Alcohol/Drug Analysis Envelope (Print envelope before applying label)
   4. NMS ziplock plastic bag

v. Right click on itemized evidence → add result → In screens box, select OLA → Click on move right arrow →check positive (ensure the confirmation box is checked) → click on 3 ellipses

vi. Add the appropriate annotation; all information may not be applicable.

   1. Blood vial that was separated from evidence and sent out: mm/dd/yy - Split one tape sealed grey top vial with blood from envelope (or ziplock plastic bag) and sent to NMS for Drug Facilitated Crime Panel (8030B). NMS Accession Number NMSxxnnnn and FedEx Tracking Number nnnn-nnnn-nnnn. initial.

   2. Blood that was split from a grey top vial and put into another grey top vial and sent out: mm/dd/yy - Split portion from one grey top vial with blood and sealed, sent to NMS for Drug Facilitated Crime Panel (8030B), NMS Accession Number NMSxxnnnn and FedEx Tracking Number nnnn-nnnn-nnnn. initial.

   3. Urine that was split from the urine jar and put into a black screw cap vial and sent out: mm/dd/yy - Split urine sample from urine jar into a black screw cap vial and sealed, sent to NMS for Drug Facilitated Crime Panel (8030U). NMS Accession Number NMSxxnnnn and FedEx Tracking Number nnnn-nnnn-nnnn. initial.

vii. Click Apply → Close → OK

viii. On the original request for the parent evidence, Click on Results → uncheck the confirm box for Instructions → Apply → Close

ix. Log time spent on OLA preparation in LIMS: Request Tab → Right click on the Tox Analysis →Activities → Click "+" button → Service: Toxicology Outside Lab Analysis → Activity: Tox OLA → Enter time spent on OLA → change quantity to "1" → Notes: OLA to NMS → Click OK → Click Close → Click Apply → Click OK.

8. Prepare the envelope (For split Case only):
   a. Load blank CCSO Blood Sample for Alcohol/Drug Analysis Envelopes into the printer auxiliary feeder.
b. Administration → Crystal Reports → Generate Reports → Muir Tox Unit → Tox OLA → Print-scan assigned bar code. Print the envelope.
   i. Add the following data from the original evidence envelope to the newly printed envelope:
      1. Expiration Date, Date of Sample, and Time of Sample

c. Complete the chain of custody on the new evidence envelope

<table>
<thead>
<tr>
<th>Received From:</th>
<th>Received By:</th>
<th>Date:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Split (1) grey top vial Initials OR Split portion from (1) grey top vial Initials</td>
<td>Via NMS FedEx</td>
<td>11/06/08</td>
</tr>
</tbody>
</table>

d. Insert bubble wrapped vial so that it lies flat on the bottom, seal the envelope with evidence tape, date & initial the tape.

e. In LIMS, transfer the new evidence envelope from yourself to NMS, Via Split Chain of Custody, Note: via FedEx
   i. Agency Representative
      1. Agency: National Medical Services
      2. Representative: National Medical Services

f. Place envelope into NMS plastic bag (roll or fold) and seal bag

g. Place the copy of the NMS Analysis Requisition and Chain of Custody form (if filling electronically) in the pocket of the NMS plastic bag.

h. In LIMS, transfer the original evidence envelope from yourself to the Muir Toxicology Refrigerator.

9. Complete the FedEx US Airbill:
   a. Write PU#CCRA at the top of the form.
   b. Complete Date & Sender’s Name fields
   c. Provide Laboratory Account Number 2184-7421-7 (if not pre-printed)
   d. Write Lab Numbers of the evidence being sent in the FedEx mailer at the bottom of the form (e.g. 12-1234-1 12-1255-2)
   e. Select FedEx Priority Overnight in section 4
   f. Select Other in section 5
   g. In section 6, select Saturday Delivery if the FedEx mailer is being sent on a Friday. Answer "No" (Does this shipment contain dangerous goods?)
   h. Select by Recipient in section 7. ALSO put the NMS billing account number (currently 0191-58-38-1) in the FedEx Acct. No. field.
   i. Enter “1” in the Total Packages field & estimate the envelope weight in the Total Weight field.

10. Call FedEx to schedule an Express Pick-up
   a. Provide the Lab account number
   b. Confirm the Lab address (Including Floor 2)
   c. Confirm the number of mailers to pick-up and that the mailer does not weigh over 150 lbs.
   d. Record the pick-up number on the top of the form.
   e. Retain the top copy of the FedEx US Airbill form for tracking purposes.
   f. Place sealed NMS box(es) in mailer and seal mailer.
   g. Affix FedEx form to mailer.
   h. Place the FedEx mailer in the Muir Incoming Evidence Refrigerator to keep the shipment cool.
   i. Clip the FedEx Pick-Up sign to the vertical files on the right side of the front counter.

11. Paperwork Follow-up
   a. Attach the worklist to the NMS Analysis Requisition and Chain of Custody form. Initial by the date at the bottom of the worklist.
i. If the worklist is printed on a different day, date and initial with the date of completion.
b. The paperwork and LIMS entries may be reviewed by another Criminalist in the Toxicology Unit; if reviewed, the
reviewer should date and initial the paperwork
c. Once reviewed the paperwork shall be filed in the OLA drawer in the store room.
d. On the next business day, go to the FedEx website and track the package via the FedEx Tracking Number on the
FedEx US Airbill form. If the package has been delivered, print the shipping/receipt details.
e. Staple the top page of the Airbill to the front of the tracking print-out and file it in the OLA Receipts FedEx drawer
in the store room.

II. The Toxicology Unit Staff shall comply with all reasonable and legitimate Discovery Requests.

A. All discovery requests are routed to the Forensic Services Division via the District Attorney's Office. These requests typically
pertain to documents related to the analysis of samples or records kept in the normal course of Laboratory business. Please see
FSD.45 for more information on discoveries.

B. The Toxicology Unit provides "basic discovery" or "extensive discovery" records.

C. A "basic discovery" is a preset document package that consists of only:
   1. Copy of laboratory report and notes
   2. Screening Run Packet
   3. Confirmation Run Packet(s)
   4. Chain of Custody

D. An extensive discovery is not a preset package. It may be a request for more detailed documentation to include, but not limited
to the Examination Records, Instrument Records, Equipment used and their Calibration Records, Standard Operating Procedures,
Proficiency Records, etc.
   1. If the discovery information sought appears to be unreasonable or irrelevant, a Supervisor or designee may contact the
   District Attorney's office for assistance in obtaining a modification or quashing the discovery. The District Attorney's
   office should review the discoveries for relevance, before sending the request to the laboratory.

E. Discovery Procedures
   1. The Clerical staff will create a discovery request in LIMS and image the request, report with notes, and chain of custody
   (CLER.DAT.12)
   2. The analyst within the unit will review the discovery request and determine if further information is needed.
   3. The discovery requests may be completed electronically and posted via ARIES.
      a. The electronic files of the records requested will be gathered and uploaded into LIMS. If concatenation is desired,
detailed procedures on how to concatenate .pdf documents can be found in "Electronic Batch Documents" (TOX.10).
      b. The Affidavit of Custodian of Records Form (TOXF.04) must be completed, digitally signed, and included in the
electronic files
      c. In the LIMS imaging module, right-click each image to be released as part of the discovery, and select "Send to
iResults". A check mark will appear next to the "Send to iResults" menu. Right click "Read Only" and a check mark
will appear next to the "Read Only" on the menu.
      d. The discovery request will be marked as "Draft Complete" by the analyst completing the discovery.
      e. The completed discovery will be checked and marked "Admin Reviewed" by a Supervisor or designee.
      f. The electronic discovery records will be accessible via ARIES for the District Attorney's office to retrieve. There is
a 24 hour lag from the time the case has been Admin Reviewed before the records will be accessible to the DA's
office.
   4. Any records not able to be uploaded into LIMS will be provided outside of ARIES.
      a. The Affidavit of Custodian of Records Form (TOXF.04) must be completed, signed, and included with the
discovery
   5. Any "RUSH" discoveries may need to be provided via paper, mail, email or fax. The "RUSH" discoveries need to be
approved by the Supervisor to access the exigency of the circumstances (FSD.45).
   6. See FSD.45 and CLER.DAT.12 for handing Civil Discoveries and Subpoena Duces Tecum.
      a. The Affidavit of Custodian of Records Form (TOXF.04) must be completed, signed, and included with the
discovery
b. The Notification and Compliance Form must be completed and returned to the Technical Services Records Unit for recording and audit/tracking

7. Subpoena Duces Tecum (SDT) for DMV Hearings
   a. Refer to BA.36, FSD.45, and CCCSO 1.05.68 for instructions to complete discovery requests for DMV hearings.
I. Policy: The Toxicology Unit has assessed estimated uncertainty for quantitative analysis of blood and urine samples. (ISO/IEC 17025:2005 5.4.6.2)

A. Reporting quantitative amounts of drugs in blood and urine is considered to be a measurement that requires uncertainty.

B. The Toxicology Unit has attempted to identify all components of uncertainty, for quantification of drugs in blood and urine samples, which are of importance to make a reasonable estimation of uncertainty. (ISO/IEC 17025:2005 5.4.6.3). Refer to the detailed write-up of the budget for specific information including the sources contributing to the uncertainty.

1. All quantitative reported results of drugs in biological samples will have an associated uncertainty reported.
2. Uncertainty will be reported in the report annex. See Reports for more information.
3. The uncertainty will be reported in the same units as the result and will not give the wrong impression of uncertainty. (ISO/IEC 17025:2005 5.4.6.2)

C. Definitions and Terms:

1. Uncertainty of a measured value is an interval around that value such that any repetition of the measurement will produce a new result that lies within this interval. This uncertainty interval is assigned by the experimenter following established principles of uncertainty estimation. Both type A and type B uncertainties exist.
   a. Type A uncertainty is data from your laboratory (the lab generated based on control charts, etc)
   b. Type B uncertainty is based on manufacturer's specifications, data from calibration reports, etc.
2. The word "uncertainty" will reflect the result with an associated confidence level.
3. The laboratory has attempted to take into account, in the uncertainty budget, the extent to which the following factors contribute to the total uncertainty of measurement of drugs in blood and urine samples: (ISO/IEC 17025:2005 5.1.1, 5.1.2)
   a. Human Factors
   b. Accommodation and Environmental Conditions
   c. Test and Calibration Methods and Validation
   d. Equipment
   e. Sampling
   f. Handling of Test and Calibration Items
4. Traceability refers to an unbroken chain of comparisons using acceptable and documented methods to national or international standards (SI) with each comparison having stated uncertainties. The measurement, or result, is traceable.
5. Elements of traceability:
   a. An unbroken chain of comparisons: an unbroken chain of comparisons going back to national (eg. NIST) or international (SI) standards.
   b. Measurement uncertainty: the measurement uncertainty for each step of the traceability chain must be calculated and reported so that an overall uncertainty may be estimated.
   c. Documentation: each step of the chain must be performed according to documented procedures, and the results must be documented.
d. Competence: laboratory performing steps in the chain must supply evidence of technical competence (eg. ISO 17025 accredited)

e. Reference to SI units: where possible the chain of comparisons must end at the primary standards for the realization of the SI units (eg. BIPM)

f. Recalibration at appropriate intervals: calibration must be repeated at appropriate intervals depending on the uncertainty required.

g. Measurement Assurance: validates and verifies steps above

END OF DOCUMENT
I. The following is a detailed explanation of the estimated uncertainty for reported quantitative values in blood and urine samples.

A. For the toxicology quantitative analysis uncertainty budget the laboratory’s approach was to:

1. Create a budget for each of the analytes analyzed quantitatively in the Laboratory.
   a. Urine results are typically reported as qualitative. Qualitative results will NOT have a reported uncertainty.
   b. ALL reported quantitative values will also be reported with an associated estimation of uncertainty.

2. The Laboratory has administrative criteria that must be fulfilled for the results of analyses of standards and/or samples to be considered valid and reportable.

3. The calculated uncertainty is only applied to samples that have met all the reporting criteria.

B. The Laboratory has utilized the NIST 8-step approach to estimating uncertainty

1. Specify the measurement process
   a. \[ y = ax^2 + bx + c \]
      where:
      i. \( y \) is the response ratio of the analyte area to the internal standard area
      ii. \( a, b, \) and \( c \) are the coefficients of the curve
      iii. \( x \) is the amount ratio of the analyte concentration to the internal standard concentration

2. Identify and characterize the uncertainty sources
   a. The Laboratory used "fishbone diagrams" and used brainstorming techniques to identify possible sources of error.
   b. See "Fishbone Diagram" at the end of the document.

3. Quantify uncertainty measurements
   a. The Laboratory uses “\( \mu g / ml \)" micrograms per milliliter as well as “\( \text{ng/ml} \)" nanograms per milliliter of the biological fluid result for the estimated measurement uncertainty SI units.

4. Convert factors to standard uncertainties
   a. The Laboratory converted factors to standard uncertainties, one standard deviation equivalents, based on the distribution (normal or rectangular distribution) and the source of the data.

5. Calculate combined standard uncertainties
   a. The Laboratory uses the "root sum square" equation.

6. Expand the uncertainty by "\( k \)"
   a. The coverage factor is the multiplier used to establish the confidence level reported.
   b. The Laboratory uses a coverage factor of \( k=2 \) or the equivalent of approximately 95%.
   c. For QC reproducibility degrees of freedom less than 30, a student t-table should be consulted.

7. Evaluate the expanded uncertainty
   a. The Laboratory evaluated the data and used Pareto charts to help visualize the significance of the contributing sources of uncertainty. The Laboratory plans to reevaluate the budget on an annual basis. If there is a change in the measurement process or the measurement instruments, the quarterly measurement assurance will be evaluated to determine if the changes are significant enough to require a full budget reevaluation.

8. Report the uncertainty
   a. No separate calculation for diluted samples is deemed necessary. No additional equipment is used when diluting samples, potential matrix effects are addressed in individual extraction procedures and mathematically it is equivalent if the dilution factor or multiplier is applied before or after data analysis (see example below).
ChemStation DOES account for the dilution
Concentration = 1.00 µg/ml (dilution factor 1:2)
ChemStation multiplies to conc. = 2.00 µg/ml
If uncertainty is 20%
Reported result = 2.00 µg/ml +/- 0.40 µg/ml

ChemStation DOES NOT account for the dilution
Concentration = 1.00 µg/ml (dilution factor 1:2)
If uncertainty is 20%, then uncertainty of result is +/- 0.20 µg/ml
Apply the dilution factor (or multiplier of 2)
Reported result = 2.00 µg/ml +/- 0.40 µg/ml

b. The final reported uncertainty will be rounded to no more than two significant figures.

C. Explanation of Line Items in the Budgets

1. **Line 1**: Purity of Reference Material (Calibration Standards)
   a. The purity of the reference material is obtained from the manufacturer’s certificate.
   b. The uncertainty is expressed as %. The data is derived from a certificate therefore it is a Type B uncertainty and the Expanded Multiplier = 2 (as indicated on the certificate) and the distribution is normal (Divisor = 1).

2. **Line 2**: Pipettes used to prepare the working solution
   a. The uncertainty associated with dilution to prepare a working solution is included. The dilution may be from an ampule or a stock solution (accounted for in line item #10) depending on the extraction.
   b. There are multiple pipettes in the Toxicology Unit. The largest manufacturer’s imprecision was included in the budget.
c. The uncertainty is expressed as %. The data is derived from a certificate therefore it is a Type B uncertainty and the Expanded Multiplier = 1, and the distribution is rectangular (Divisor = √3).

3. **Line #3:** Volumetric glassware used to prepare the working solutions
   a. The uncertainty associated with dilution to prepare a working solution is included. The dilution may be from an ampule or stock solution (accounted for in line item #11) depending on the extraction.
   b. There are multiple sizes of volumetric glassware in the Toxicology Unit. The customer specified tolerance is 0.1 ml for a 5 ml flask (2%). The largest imprecision was selected from the serialized volumetric glassware available in the unit (5-50 ml).
   c. The uncertainty is expressed as %. The data is derived from a specification therefore it is a Type B uncertainty and the Expanded Multiplier = 1, and the distribution is rectangular (Divisor = √3).

4. **Line #4:** Volumetric glassware used to prepare matrix standards
   a. See Line 3.

5. **Line #5:** Pipettes used to prepare matrix standards
   a. See Line 2.

6. **Line #6:** Pipettes used to dispense standards
   a. See Line 2.

7. **Line #7:** Pipettes used to dispense samples
   a. See Line 2.

8. **Line #8:** Ripettes used to dispense Internal Standard
   a. The uncertainty associated with dispensing an internal standard is included.
   b. There are multiple Ripettes in the Toxicology Unit. The manufacturer’s imprecision is 0.8% for all settings, based on the Heusser-Neweigh certificate. The Ripettes used have a measured imprecision less than the manufacturer’s imprecision that was included in the budget.
   c. The uncertainty is expressed as %. The data is derived from a certificate therefore it is a Type B uncertainty and the Expanded Multiplier = 1, and the distribution is rectangular (Divisor = √3).

9. **Line #9:** QC Reproducibility
   a. QC solutions are evaluated for each extraction and analyte. The QC data includes variations due to instrumentation, analyst, and environmental conditions. Each extraction includes at least one QC for every 10 case samples. The Laboratory subtracts the value obtained during analysis from the target value. The differences are converted to a % so that different QC solutions can be evaluated.
   b. The uncertainty is expressed as %. The data is laboratory generated therefore it is a Type A uncertainty and the Expanded Multiplier = 1, and the distribution is normal (Divisor = 1).
   c. Values outside of 20% QC criteria may be evaluated statistically by quartile boxplot analysis. If a point is determined to be an outlier it is excluded from the data used to determine the QC Reproducibility.

   **NOTE:** Extractions that require an additional dilution step to create a stock solution between the ampule and the working solution include the following line items:

10. **Line #10:** Pipettes used to prepare the stock solution
    a. See Line 2.

11. **Line #11:** Volumetric glassware used to prepare the stock solution
    a. See Line 3.

D. **Explanation of Fishbone Diagram**

1. **Design:**
   a. GC/MS variability is addressed with QC Reproducibility data and method validation.
   b. Pipette and glassware variability is addressed with QC Reproducibility data and the calibration information (from the certificate) included in the budget.
   c. Dean-switch time windows are addressed with QC Reproducibility data.
   d. GC/MS drift is addressed with QC reproducibility data and SOP criteria for running QCs.
   e. Reproducibility is addressed with QC reproducibility data.

2. **Installation:**
   a. External/internal validations are addressed with performance verification, reproducibility data, and method validation.
   b. Software validation (data transfer/ manipulation) is addressed with method validation.
c. Location of equipment is addressed with QC reproducibility data and method validation.

3. **Staff and Procedures:**
   a. Training/experience/variability with staff: is addressed with SOP (competency testing) and QC Reproducibility data.
   b. Clarity of method/procedures is addressed with SOP (competency testing) and QC reproducibility data.
   c. Technique for aliquoting (air bubbles, clots, etc.) is addressed with SOP (competency testing) and QC reproducibility data.
   d. Contamination between samples is addressed in SOP.
   e. Interfering substances are addressed in method criteria for identifying substances and method validation.
   f. Equipment calibration is addressed in SOP.

4. **Standards:**
   a. Standard requirements (traceability, uncertainty, purity) are addressed in SOP. Uncertainty is addressed in the budget through the manufacturer’s certificate.
   b. Internal standard variability is addressed in the budget through the ripette calibration.
   c. QC reproducibility is addressed in the budget with QC reproducibility data.
   d. Stability of solutions is addressed in the budget with QC reproducibility data, addressed in the SOP and in method validation.

5. **Facility:**
   a. Temperature stability is addressed in SOP and with QC reproducibility data.
   b. Back-up power is not addressed in SOP.
   c. Humidity is addressed in SOP and with QC reproducibility data.
   d. Gas supply to the GC/MS is addressed with QC reproducibility data.
   e. Security is addressed in SOP.

6. **Method of Use:**
   a. Extraction recovery (derivitization, elution, hydrolysis, reagent preparation, etc.) is addressed with QC reproducibility data and in supply ordering process.
   b. Matrix effects are addressed with QC reproducibility data and in SOP (matrix matched standards and QCs).
   c. Effect of preservative/anticoagulant is addressed with QC reproducibility data and in SOP. Preservative is typically in blood and urine standards and QCs. Anticoagulant is typically in blood standards and QCs.
   d. Resolution of instrument (# of digits evaluated) is addressed with QC reproducibility data.
   e. Scheduled maintenance is addressed with QC reproducibility data and in SOP.
   f. Calibration curve criteria are addressed with QC reproducibility data, in SOP, and in method validation.
I. Policy: These guidelines in conjunction with the Forensic Services Division Safety Manual will be followed to ensure employee safety within the laboratory (Supplemental 5.3.6).

A. Wear appropriate personal protective equipment when handling chemical and bio-hazardous materials. Consult the Forensic Services Division Safety Manual for further information. Safety Data Sheets (SDS), located in the laboratory technical units, should be consulted whenever using an unfamiliar chemical.

B. The following personal protection equipment should be worn at all times when working with or near hazardous substances or activities:
   1. Laboratory coat
   2. Latex or nitrile gloves
   3. Safety glasses when mixing and preparing reagents
   4. Safety glasses with side shields that conform to the American National Standards Institute (ANSI) standards (prescription glasses with safety lenses and side shields are allowed).
   5. No safety glasses are necessary while working within the fume hoods with the sash closed below the adequate ventilation line.

C. It is the responsibility of the analysts working within the lab to be familiar with the Division's Safety Manual and to comply with all safety requirements.

D. When using "Sharps" or "Sharps Biohazard" bins for disposing of glassware or other "sharps", the bin should not be filled past the "fill line" indicated on the bin.

E. All bins need to be labeled appropriately (regardless of any markings on the bags inside the bins). This includes: "Biohazard", "Chemical Waste" and "Debris Waste".
   1. Typically, "chemical waste" consists of large amounts of chemicals like:
      a. corrosive acid inorganic waste or "acid waste"
      b. flammable organic waste or "organic waste"
      c. corrosive basic inorganic waste or "basic waste"
   2. Typically, hazardous waste solids or "debris waste" contains items with chemical residue (e.g. slides, pipettes, spot plates etc).
   3. Biohazard waste consists of biohazard materials (e.g. blood soaked gloves).
      a. gloves or "wipes" with small amounts of blood may be placed in the trash cans

F. Any larger container (e.g. 50 gallon drum) used to temporarily hold the bags of waste should also be labeled appropriately. This includes: "Biohazard", "Chemical Waste" and "Debris Waste".

END OF DOCUMENT
I. Policy: The training protocol for forensic toxicology analysis (blood and urine) will be used to train Criminalists in knowledge, skills, and abilities prior to being authorized to perform casework analysis.

A. Toxicology Training - Introduction

1. Intent and Purpose of Training Program: The goals of the Blood and Urine Toxicology Training Program are:
   a. To develop knowledge, skills, and abilities in the area of toxicology analysis culminating in the ability to perform casework independently in accordance with approved policies and procedures
   b. To understand and implement the policies and procedures in the Toxicology Technical Unit Manual and Division Manual to perform casework
   c. To gain expertise and knowledge in the usage and best practices of instrumentation culminating in the ability to troubleshoot and perform routine maintenance on instrumentation.
   d. To gain expertise in courtroom testimony and drug impairment through training and experience.

2. Educational Requirements:
   a. Analysts working in the toxicology sub-discipline shall possess a baccalaureate or an advanced degree in a natural science, criminalistics or a closely related field.

3. Expectations of the Trainee:
   a. The trainee is expected to do the following
      i. Abide by the training modules and any modifications, if applicable
      ii. Maintain a Training Binder (electronic or hard copy)
      iii. Maintain a reading list
      iv. Maintain documentation of each module
      v. Maintain documentation of practice runs completed
      vi. Communicate concerns about training with the Supervisor

4. Competency Test: The training program may be abbreviated for analysts with previous experience in toxicology analysis
   a. It is at the discretion of the Supervisor or Manager to abbreviate the training program based on previous experience. If the program is abbreviated, the following shall be documented
      i. Previous experience
      ii. Pertinent training from this procedure that is omitted, abbreviated, and/or completed
   b. Successful completion of the competency test is required before assuming casework responsibilities
   c. The competency may be divided among the sections below, allowing the analyst to begin casework in one type of analysis while training in the others.
   d. Competency exams may be divided into the following categories. Each extraction competency is comprised of a combination of an extraction type (SPE or L/L) and a data analysis type (SIM or FULL scan)
      i. Screening by immunoassay
      ii. A liquid/liquid extraction
iii. A solid phase extraction
iv. SIM analysis
v. FULL scan analysis
vi. 2D-GC/MS

e. Extractions types can be further divided into groups based on related extraction steps. It is recommended, but not required, that a competency includes extractions from the different categories.
i. Underivatized
ii. Derivatized
iii. Hydrolysis

f. At minimum, each competency will include:
i. Test of knowledge - a written closed book test administered after the assessment. The supervisor may require this to be completed successfully before providing samples for analysis.

ii. Ability to analyze samples by the selected method
   1. Previously analyzed proficiency or competency samples will not be reused as proficiency or competency samples
   2. Competency samples may be internal or external
      1. See TOX.15 Court Testimony and Proficiency Testing for additional information on preparation of internal samples

iii. Ability to generate written reports to properly convey results

iv. Practical exercise for courtroom testimony (mock court or oral exam).

g. Criteria for a successful analysis of samples

i. Screening (spiked samples)
   1. The results for each sample must correctly identify the spiked samples as positive or negative.

ii. Confirmations (spiked samples)
   1. Chromatography and any other criteria used to evaluate extraction packets and casework must be acceptable within unit procedures and best practices (including retention times, ion ratios, peak shape and resolution, negative control, r² value)
   2. Each quantitative result obtained must fall within +/- 20% of the expected target (spiked) value
   3. Each qualitative result must correctly identify the spiked samples

iii. When the criteria is not met, remedial training will occur and it will be documented with a QA Action.

h. The trainee will work under the supervision of the Supervisor or designated trainer

i. Documentation for the results of the competency will be kept in LIMS

j. Copies of the competency documentation should be kept in the training binder of each trainee.

5. Training Records

a. The appropriate training records and assessments will be placed in the employee's Training Binder, maintained by the employee, and reviewed by the Manager, Supervisor, or Trainer upon completion of the training

b. Assessments will be placed in the employee's Training Binder

c. Additional training such as seminars, workshops, conferences, and classes will be documented in the employee's Statement of Qualifications

d. Authorizations for casework analysis are found in the Toxicology Authorization Checklist
   1. During training, the authorization checklist will be kept and maintained by the trainee. After completion of training, the original checklist is kept by the Supervisor/Manager.
e. The trainee's Training Binder will minimally include:
   i. Practice run information
   ii. Copy of Toxicology Authorization checklist
   iii. Reading list
   iv. Competency and Proficiency documentation
   v. Documentation from modules (practical exercises and questions)
   vi. Any written feedback
   vii. Mock court assessments
f. The Training binder may also include:
   i. Notes on lectures, webinars, training, readings

6. **Timeline and Progress Expectations**
   a. The training program for toxicology analysis should take approximately 1-1.5 years
   b. The expected duration per section are guidelines and may be adjusted by Supervisor:
      i. Modules I - VII (1-2 months): orientation, job-shadowing, review of safety, ethics, evidence handling, unit and FSD policies and procedures, and preparation of solutions
      ii. Module VIII - Screening (1-2 months): analysis of case-like samples by immunoassay screening, instrument theory and operation. The analyst should be assessed for readiness by the Supervisor prior to being given the competency test
      iii. Module IX - X - Introduction to Gas Chromatograph/Mass Spectrometer and Liquid-Liquid Extractions (2-3 months): analysis of case-like samples, solution, instrument theory and operation. The analyst should be assessed for readiness by the Supervisor prior to being given the competency test
      iv. Module XI - Solid Phase Extractions (3-4 months): analysis of case-like samples, instrument theory and operation. The analyst should be assessed for readiness by the Supervisor prior to being given the competency test
      v. Module XII - Two Dimensional Gas Chromatograph (1-2 months): analysis of case-like samples, instrument theory and operation. The analyst should be assessed for readiness by the Supervisor prior to being given the competency test
      vi. Module XII - Court Testimony for Analysis (1 month): mock court for toxicology analysis
   c. The toxicology training program consists of modules
      i. Each module is designed to be accumulative in knowledge, however each module does not necessarily need to be completed in order
      1. When modules are done out of order or worked on concurrently, the Supervisor or trainer will determine what portions of previous modules are critical to the completion of the current module
      2. Select modules that have technical requirements (such as instrument data packets) that must be reviewed by a Supervisor or trainer prior to being given a competency
      3. Abbreviated training for a module is at the discretion of a Manager or Supervisor
      4. If a module is abbreviated or adjusted, documentation in the Toxicology Authorization Checklist or a memo will be maintained in the trainee's Training Binder
      5. Changes to a module may occur due to uncontrollable circumstances (a drug is not available, extraction temporarily taken off line)
         1. The Supervisor or Manager will evaluate if this requires adjustment to the administration of training, assessments, or competency of a module
         2. Adjusted module training assessment and/or competency will be documented in the Toxicology Authorization Checklist or a memo
      ii. Select modules have questions to be completed
1. Trainee will answer questions in their own words. Policies, procedures, and references will not be extensively quoted or referenced verbatim.
2. The Supervisor is not limited by these questions and may use additional questions during a competency or evaluation if deemed necessary.
3. Questions will be reviewed and written feedback will be given.
4. Questions will be filed in the trainee's Training Binder.

7. Effectiveness of Training:
   a. The following are training actions and can be used to evaluate the effectiveness of initial training:
      i. Communication with the Supervisor/Technical Lead throughout the training program, which may include:
         1. Verbal feedback
         2. Written feedback
         3. Annual performance Evaluation (Supervisor)
      ii. Written feedback will be provided for practical exercises and written questions/answers as indicated in the documented training program.
      iii. Competency testing prior to assuming casework responsibilities.
      iv. Mock court exercises.
      v. Assessments at the end of each module.
         1. Select modules require documentation of practical exercises and will be used as assessments.
   b. The following are training actions and can be used to evaluate the effectiveness of on-going training:
      i. 100% technical and administrative review of casework.
      ii. Proficiency testing.
      iii. Court critiques.
      iv. Oral or written feedback provided to Supervisor upon completion of:
         1. Training classes
         2. Webinars
         3. Journal articles and other pertinent readings.
      v. Yearly performance evaluation that includes setting goals for the analyst, review of SOQ, and training binder. This assessment reviews analyst goals for development and evaluates the effectiveness of training actions and if further training actions are needed.

8. Maintenance of skills and re-training:
   a. Annually, a proficiency is required when performing case work analysis in the toxicology unit; this is a demonstration of maintenance of skills.
   b. If technical issues arise from a proficiency test, courtroom testimony monitoring, or 100% technical review of casework the Manager or Supervisor may require re-training in any of the areas listed below. The re-training will be documented.
   c. Staff will be encouraged to attend on-going training by attending courses, meetings, and workshops.
   d. Presentation of evidence in court (eg. CCI class, courtroom monitoring, etc.).

9. New Equipment and/or Methodologies:
   a. Training will be provided on any new equipment or methodology.
   b. A competency will be given when new equipment and/or methodologies are introduced to the laboratory that are significantly different from equipment and/or methodologies that the analyst was previously deemed competent and authorized to use for casework.
   c. The need and extent of a competency will be evaluated by the Supervisor or Manager.

10. Scope of Training: Training will address all of the following:
a. Knowledge
   i. Basic scientific principles upon which are the foundation of forensic toxicology analysis
   ii. Reviewing relevant literature
   iii. Reviewing procedures generally accepted in the discipline
   iv. Attending courses, meetings and workshops, if possible

b. Procedures
   i. Proper evidence handling procedures including:
      1. opening evidence
      2. selection of items to examine
      3. marking of items
      4. storage of evidence
      5. disposition of evidence
   ii. Proper note-taking and recordation of examination records: recording handwritten and/or electronic
      notes (use of LIMS)
   iii. Proper report writing: entering results into LIMS
   iv. Presentation of Evidence in Court
   v. Application of Ethics in Forensic Science

c. Theory and Use of Equipment and Software Used
   i. The use and limitations of instruments
   ii. Possible sources of error
   iii. Interpreting results

d. Practice
   i. Performing tasks under direct supervision
   ii. Performing practical toxicological exercises using known samples which mimic casework samples
      (spiked samples)
   iii. Reanalyzing standards, quality controls, or other samples from previous casework if applicable and
      available
   iv. Independently perform practice casework runs(s) within a test case.

e. Reporting
   i. Receiving instruction from experienced analysts and observing reporting practices
   ii. Reviewing other laboratory reports
   iii. Independently write and complete practice reports(s) within a test case.

11. Authorization for Blood and Urine Toxicology Analysis
    a. The use of the Toxicology Authorization Checklist in conjunction with the documented training program is
       the manner in which management can ensure the competence of all who operate specific equipment,
       perform tests, and sign reports.
       i. Initials in the "Analyst" column indicates that the analyst has completed training in the area
          indicated. Initials in the "Trainer" column indicates who provided and supervised the training.
       ii. When a module that requires a competency is complete, the Supervisor is sign the Casework
           Authorizations, allowing the Criminalist to perform casework
           1. Other casework related duties must also be authorized, such as business records and technical
              review

12. Further Information
    a. Refer to the Division Manual for further information regarding training (FSD.21)
B. Toxicology Training - Literature Review

1. A reading list comprising of all literature reviewed during training will be maintained by the trainee and maintained in the Training Binder

2. Literature Collection: The trainee will read extensively from the Toxicology literature collection. Subjects will include, but are not limited to, the following:
   a. Blood, urine, and other fluid and tissue specimens for drug analysis
   b. Immunoassay
   c. Gas chromatography/mass spectrometry
   d. Sample preparation techniques
   e. Preservatives/anticoagulants
   f. Collection, storage, and stability of specimens for analysis
   g. Physiology and pharmacology of drugs
   h. Quality assurance
   i. Expert testimony

3. Selected References: The following are suggested readings and reference materials for the toxicology program. Textbooks are located in the Laboratory library. Journal articles are found in PowerDMS as well as through the laboratory's online subscriptions. Online courses may also be available:
   a. Toxicology Literature Binders (see Literature Collection)
   h. Disposition of Toxic Drugs and Chemicals in Man, Baselt, Cravey editors, Chemical Toxicology Institute, 1995.

II. Modules: The toxicology training program includes the following modules

A. Module I: General Forensic Knowledge (1 week)

1. Objectives and Topics of Study:
   a. The trainee will learn general information about forensic science
   b. The trainee will study the following topics regarding forensic science
      i. Brief history of forensic science
      ii. Disciplines of forensic science

2. References:
   b. Chapters 1 and 2: Forensic Science Handbook, Volume II, 2nd ed; Saferstein

3. Practical Exercises/Questions:
   b. Define the term "evidence"
   c. Why is this field of work important in our community?
   d. What is the scientific method?
e. Is a forensic scientist required to know anything about the rules of the law? Explain
f. What is the role of a forensic scientist expert witness in court?

4. Assessment:
   a. The trainer will review the questions and provide written feedback to the trainee.

5. Documentation:
   a. The completed questions and written feedback will be kept in the trainee's Training Binder
   b. The requirements of this module may also be met by documentation of:
      i. Completion of another unit's General Forensic Knowledge Module
      ii. Formal education in Forensic Science
      iii. Certification that includes a general knowledge component

B. Module II: Basic Principles of Toxicology (1 week)

1. Objectives and Topics of Study:
   a. The trainee will learn the role of toxicology in forensic science
   b. The trainee will study the following topics regarding Forensic Toxicology
      i. Human Performance Toxicology
      ii. Pharmacokinetics and Pharmacodynamics
      iii. Postmortem Toxicology and Postmortem Redistribution
      iv. Testing Methodologies
      v. Validation
      vi. Stability
   
2. References to Review:
   a. Chapters 1, 2, 3, 4, 6, 7, 8, 9, 10, 11, 12, 30, and 31: Principles of Forensic Toxicology, 4th ed; Levine
   b. Chapter 2: Handbook of Forensic Drug Analysis, Smith and Siegel

3. Practical Exercises/Questions:
   a. Define Forensic Toxicology
   b. What is presumptive testing?
   c. What is confirmation analysis?
   d. Who said, "Solely the dose determines that a thing is not a poison"?
   e. Why is the statement so important to forensic toxicology? Explain
   f. Name three different individuals who made significant contributions to the field of toxicology and describe their contributions.

4. Assessment:
   a. The trainee will complete the questions and the Supervisor or designee will review and provide written feedback

5. Documentation:
   a. The completed questions and written feedback will be kept in the trainee's Training Binder

C. Module III: Code of Ethics (1 week)

1. Objectives and Topics of Study:
   a. The trainee will learn the role of ethics in forensic science
   b. The trainee will study the following topics regarding ethics
      i. The meaning of ethics
ii. The meaning of bias
iii. Code of Ethics and how it applies to Forensic Science

2. References to Review:
   a. California Association of Criminalist Code of Ethics
   b. Competency, Training, Authorizations, and Ethics (FSD.21)

3. Practical Exercises/Questions:
   a. What are ethics?
   b. Why are ethics important in Forensic Science?
   c. What is bias? Is it good or bad? Describe and give examples.
   d. How can bias affect your work in toxicology?

4. Assessment:
   a. The trainee will answer the Code of Ethics questions and the Supervisor or designee will review and provide written feedback

5. Documentation:
   a. The completed questions and written feedback will be kept in the trainee's Training Binder

D. Module IV: Specimen and Handling Safety (1 week)

1. Objectives and Topics of Study:
   a. The trainee will learn how to properly handle and preserve evidence in the laboratory
   b. The trainee will study the following topics regarding evidence
      i. Safe handling of specimens
      ii. Proper documentation of specimens
      iii. Chain-of-custody documentation
      iv. Verification and marking of evidence
      v. Note taking
      vi. Aliquoting requirements (sampling)
      vii. Sample storage
      viii. Evidence sealing
      ix. Sending out OLA/referee samples
      x. Additional safety training, if deemed necessary by Safety Officer and Supervisor

2. References:
   a. FSD Safety Manual (SAF.01 to SAF.34, as applicable)
   b. Evidence Handling (TOX.07)
   c. Performing Immunoassay (TOX.35)
   d. Performing Extractions (TOX.41)
   e. Outside Laboratory Analysis (TOX.56)
   f. Technical Records (TOX.08)
   g. List of Abbreviations (TOX.04)
   h. LIMS Reporting Results (TOX.38)
   i. Health and Safety (TOX.59)
   j. Evidence Handling (FSD.35)
l. California Health and Safety Handbook  
m. California Penal Code Handbook

3. **Practical Exercises/Questions:**
   a. **Exercises:**
      i. The trainee will observe the trainer or an experienced analyst performing the tasks listed above which include:
         1. Proper evidence handling techniques when opening/closing cases, analyzing samples, and/or sending samples to an outside laboratory
         2. Proper chain of custody documentation
         3. LIMS note taking
   b. **Questions:**
      i. Case Examination/Evidence Handling/SOPs
         1. Describe how the laboratory accepts evidence for alcohol and tox analysis from Contra Costa County agencies.
         2. Describe how to determine the extent of analysis that will be performed.
         3. Describe how the evidence is handled after it has been analyzed and a report has been generated and reviewed.

4. **Assessments:**
   a. The trainee will complete the Case Examination/Evidence Handling/SOPs questions and the Supervisor or designee will review and provide written feedback

5. **Documentation:**
   a. The completed questions and written feedback will be kept in the trainee's Training Binder

E. **Module V: Computer Software and Worksheets (1 week)**

1. **Objectives and Topics of Study:**
   a. The trainee will learn the LIMS system and other software used in the laboratory
   b. The trainee will study the following topics regarding the use of software and LIMS
      i. Entering notes in JusticeTrax, the Laboratory Information Management System (LIMS),
      ii. Generating worklists
      iii. Generating reports
      iv. General laboratory generated paperwork organization and filing
      v. Generating Crystal Reports to assist the Toxicology Unit in casework workflow
      vi. Toxicology Unit database

2. **References:**
   a. Technical Records (TOX.08)
   b. Lims Reporting Results (TOX.38)
   c. Reports (TOX.09)
   d. Uncertainty (TOX.57)
   e. Case File Images (TOX.10)
   f. List of Forms (TOX.05)
   g. Toxicology Tracking Database (TOX.64)
   h. Laboratory Number (QA.02)
i. Amending Reports (QA.04)
j. Adding, Itemizing, and Transferring Evidence in LIMS (QA.09)
k. LIMS Training Module and Procedure (QA.12)
l. Laboratory Information Management System (FSD.10)
m. Evidence Itemization (FSD.38)
n. Case Record (FSD.42)

3. Practical Exercises/Questions:
   a. Exercises:
      i. The trainee will be introduced on general laboratory work flow by a Supervisor, trainer, or designee
      ii. The trainee will observe the trainer or an experienced analyst in proper note taking practices with LIMS
      iii. The trainee will observe the trainer or experienced analyst perform an evidence split for an outside laboratory analysis, including documentation in LIMS
      iv. The trainee will observe the trainer or an experienced analyst on how to use the toxicology database
         1. Only a general understanding of the database is necessary and more training on database entries will be on going
      v. The trainee will have the opportunity to use LIMS and the tracking database and can make entries under the supervision of a qualified analyst
         1. A LIMS test case may be used for practicing LIMS entries (Laboratory #18-26 is a test case that can be used, check with LIMS administrator for other test cases)

4. Assessment:
   a. The trainee will demonstrate unit practices and the use of LIMS by entering notes when opening casework under observation by an experienced analyst

5. Documentation:
   a. Trainer will document observation of opening casework in the training binder
   b. After the assessment the trainee is qualified to open casework and perform evidence splits independently

F. Module VI: Traceability and Uncertainty of Measurement (1 week)

1. Objectives and Topics of Study:
   a. The trainee will learn about traceability and uncertainty of measurement in forensic toxicology
   b. The trainee will study the following topics regarding traceability
      i. Uncertainty of Measurement
      ii. Measurement Assurance
      iii. Traceability

2. References:
   a. Uncertainty (TOX.57)
   b. Uncertainty Budget (TOX.58)
   c. Toxicology Uncertainty of Measurement Budgets (UM.05)
   d. Test Quality, Measurement Assurance, and Corrections (TOX.62)
   e. Measurement Traceability (FSD.28)
   f. Software (TOX.18)
   g. Toxicology Tracking Database (TOX.64)

3. Practical Exercises/Questions:
   a. The trainee will be introduced to traceability, uncertainty, and the fish bone diagram
b. If possible, the trainee will observe the LIMS update of Uncertainty of Measurement and the Report Validation process  

c. The trainee will observe the Quarterly Measurement Assurance (MA) plots  

d. The trainee will observe the use of the Toxicology Tracking Database and review functions and reports available in the database  

e. The trainee will review the following  

i. Certificate of Analysis - received when purchasing reference materials  

ii. Completed Toxicology report(s) and notes - Qualitative and Quantitative analysis  

4. Assessment:  

a. The trainee will perform the Quarterly MA plots and the Report Validation  

i. These tasks are done quarterly and annually respectively and the trainee may proceed with training prior to completing these tasks  

5. Documentation:  

a. Observation and/or participation in Uncertainty Report Validation and MA plots will be documented  

G. **Module VII: Preparation of Lab Generated Solutions and General Laboratory Equipment (1 week)**  

1. Objectives and Topics of Study:  

a. The trainee will learn how to use general laboratory equipment and prepare solutions used in the toxicology unit  

b. The trainee will study the following topics regarding the equipment and solutions used in the toxicology unit  

   i. Reagents  

   ii. Reference solutions  

   iii. Verification of solutions  

   iv. Resolution check solution.  

   v. Volumetric flasks; Class A: serialized vs. non-serialized  

   vi. Pipettor, Eppendorf or equivalent, variable volumes  

   vii. pH meter  

   viii. Balance  

   ix. Thermometer  

2. References:  

a. FSD Safety Manual (SAF.01 to SAF.34, as applicable)  

b. Reagents Preparation (TOX.13)  

b. Reference Materials (TOX.11)  

d. Lab Generated Solutions (TOX.12)  

e. Preparation of Calibrators for the Immunoassay (TOX.40)  

f. U-AMP/METH (TOX.46)  

g. B-AMP/METH/MDA/MDMA (TOX.42)  

h. U-CARBOXY-THC (TOX.47)  

i. List of Forms (TOX.05)  

j. pH meter (TOX.22)  

k. AMP/METH in urine (TOX.46)  

l. Care and Maintenance of Equipment (TOX.17)
m. Glassware (TOX.21)

n. Diluters and Pipettes (TOX.20)

o. Balances (TOX.19)

p. Glassware and Thermometers (BA.27)

q. Toxicology Tracking Database (TOX.64)

r. 10 tips to improve pipetting technique - Artel-USA, Inc.; posted throughout laboratory

3. Practical Exercises/Questions:
   a. Exercises
      i. The trainee will successfully determine the calculations necessary for modifying existing recipes.
         1. Preparing a reagent at a larger or smaller volume specified in the recipes
         2. Preparing a standard of a different volume than specified in a procedure
         3. Preparing a standard when starting from a different concentration than stated in the procedure
      ii. The trainee can practice pipetting the following
         1. Blood
         2. Water
         3. Methanol
      iii. The trainee may practice making solutions using volumetric flasks of various sizes
      iv. The trainer or designee will review proper use of the equipment listed above, including
         1. Proper pipetting technique
         2. When to use calibrated or non-calibrated glassware

4. Assessment:
   a. The trainee may practice pipetting by performing gravimetric checks
      i. Volumes should include those commonly found in standard preparation or extraction procedures
   b. The trainee will make at least one of each of the following and document according to the unit's procedures
      i. Matrix solution
         1. This includes extraction standards, QC and/or immunoassay calibrators
      ii. Lab generated reagent
      iii. Lab generated buffers

5. Documentation:
   a. Copies of the traceability forms from the assessments will be kept in the trainee's Training Binder
      i. Each reagent and matrix solution prepared by the trainee must be verified and within the acceptable criteria for casework
   b. The results of any gravimetric checks will be kept in the trainee's Training Binder

H. Module VIII: Performing Immunoassay Screening (1-2 months)
   1. If the following have not been covered prior to beginning this Module, they must be addressed during this module
      a. Understanding of proper use and maintenance of equipment in Module VII
      b. Understanding reference solution, reagent preparation, and usage in Module VII
         i. Immunoassay calibrator preparation and verification may be performed by trainee
   2. Objectives and Topics of Study:
      a. The trainee will learn how to perform immunoassay screening on samples
b. The trainee will study the following topics regarding immunoassay screening:

   i. Equipment:
      1. Dynex DSX
      2. Hamilton digital dilutor with hand probe, Model 500, or equivalent
      3. Pipettor, Eppendorf or equivalent, or variable volumes
      4. Dynex Software Interface
      5. Barcode Scanner
      6. Sampling

3. References:

   a. General Information (TOX.01)
   b. Evidence Handling (TOX.07)
   c. Performing Immunoassay (TOX.35)
   d. Dynex Operation (TOX.36)
   e. Dynex Maintenance (TOX.37)
   f. Dynex References (TOX.39)
   g. Diluters, and Pipettes (TOX.20)
   h. Care and Maintenance of Equipment (TOX.17)
   i. Software (TOX.18)
   j. Case File Images (TOX.10)
   k. LIMS Reporting Results (TOX.38)
   l. Evidence-Barcode Scanner (TOX.65)
   m. Toxicology Tracking Database (TOX.64)
   o. California Health and Safety Handbook
   q. Toxicology Literature Binders
   r. Chapter 10: Principles of Forensic Toxicology, 4th ed, Levine
   s. Chapter 2: Handbook of Forensic Drug Analysis, Smith and Siegel

4. Practical Exercises:

   a. Exercises:
      
      i. The trainee will observe the use and maintenance of the Dynex DSX and the Hamilton Dilutor by a competent analyst
      
      ii. The trainer will review with the trainee the following as it relates to immunoassay screening:
      
         1. Dynex Maintenance and Usage Logs
         2. Hamilton Diluter Logs
         3. Validation Binder
         5. Plate (Manufacturer) information
iii. The trainee will practice screening non-casework samples which will encompass the use and maintenance of the Dynex DSX and Hamilton Dilutor

1. Samples may include matrix spiked samples that are subject to high cross reactivity vs. low cross reactivity
2. Screening packets must be created for all sessions, regardless of results, according to the unit's procedures

b. Study Questions:
   i. Immunoassay
      1. Explain the advantages and disadvantages of screening for the presence of drugs.
      2. What type of immunoassay is used in the Toxicology Unit?
      3. Explain the following terms as they apply to ELISA: antigen, antibody, microplate, substrate, horseradish peroxidase, cross-reactivity, cutoff, true positive, false-positive, sensitivity, false-negative and specificity.
      4. Is ELISA a homogeneous or heterogeneous immunoassay? Explain the difference between the two.
      5. Name the analyte of interest that is the primary target of the antibody for each of the ELISA assays.
      6. Explain the advantage and disadvantages of cross-reactivity.
      7. Describe the components of the ELISA kits and explain the purpose of each.

5. Assessment:
   a. The trainee will complete the Immunoassay questions and the Supervisor or designee will review and provide written feedback
      i. The questions and practical exercises may be expanded upon by the Supervisor/Trainer or designee.
      ii. The criminalist will receive written feedback from their trainer.
   b. Screening packets will be compiled for all practice runs and reviewed by the Supervisor, trainer or designee
      i. The Screening Traceability Worksheet will be completed and included in the run packet
      ii. The Barcode Scanner sheet may be included but is not required due to restraints of non-casework samples

6. Competency:
   a. The Test of knowledge is a closed book test.
   b. The criteria for evaluation will be a percentage of the total number of questions provided (i.e. 10 questions = 10 points per question). Trainee must receive \( \geq 80\% \) score on the Test of Knowledge to pass the written exam. Scores between 70-80\% can be remediated with follow up clarification. Scores below 70\% will be marked unsuccessful and will require documentation through a QA Action as well as further remedial training.
   c. The trainee will be given a competency consisting of unknown samples and will be completed according to unit procedures
   d. The trainee will be given a practical exercise for courtroom testimony covering immunoassay screening
   e. The trainee may begin performing immunoassay screening of casework after successful completion of competency and upon authorization from the Manager/Supervisor.

7. Documentation:
   a. The following will be kept in the trainee's Training Binder
      i. Immunoassay questions with written feedback from Supervisor, trainer, or designee
      ii. Toxicology Electronic Signature Form and Screening Traceability Worksheet from all practice screenings
      iii. Copy of competency paperwork
I. Module IX: Performing Extractions Part I: Equipment (1-2 months)

1. Objectives and Topics of Study:
   a. The trainee will learn how to use and maintain a Gas Chromatograph Mass Spectrometer
   b. The trainee will study the following topics regarding an Agilent Gas Chromatograph/Mass Spectrometer:
      i. Equipment
         1. Agilent Gas Chromatograph/Mass spectrometer
         2. Repeating Pipettors, Ripette or equivalent
         3. Volumetric flasks, Class A: serialized and non-serialized
         4. General Test Equipment - centrifuge, heating block, evaporator, vortex mixer
         5. Barcode Scanner

2. References:
   a. FSD Safety Manual (SAF.01 to SAF.34, as applicable)
   b. Performing Extractions (TOX.41)
   c. LIMS Reporting Results (TOX.38)
   d. Care and Maintenance of Equipment (TOX.17)
   e. GC/MS maintenance procedures (TOX.23-TOX.34)
   f. GC/MS References (TOX.34)
   g. individual extraction methods located in the validation binder
   h. Software (TOX.18)
   i. Diluters and Pipettes (TOX.20)
   j. Glassware (TOX.21)
   k. Chapters 10-12: Principles of Forensic Toxicology, 4th ed, Levine
   l. Evidence-Barcode Scanner (TOX.65)

3. Additional Resources:
   a. Webinars (content may differ based on availability at the time of training of each trainee)
   b. Agilent resources are available through the Agilent website and Agilent University
      i. Published papers and videos for similar GCMS modules are useful tools
      ii. Agilent technical notes and white papers
      iii. Agilent University (content may differ based on availability at the time of training of each trainee)
   c. Mass Spectrometry courses are available through
      i. California Criminalistics Institute
      ii. West Virginia University
   d. Vendor training can be considered upon Supervisor and trainer assessment

4. Practical Exercises:
   a. Exercises:
      i. The trainee will observe the use and routine maintenance of a GCMS
      ii. The trainer will review the following with the trainee:
          1. GCMS Maintenance Binders (Instrument Logs)
          2. GCMS troubleshooting diagrams
3. Standard Tune Reports

iii. The trainee will observe routine maintenance such as: cleaning the source, changing the gold seal, installing a column. The trainee can then perform routine maintenance under supervision.

iv. Not all GCMS maintenance is routine and the trainee may not have the opportunity to observe performance prior to completion of the module; examples of non-routine maintenance are:

1. Merlin MicroSeal replacement
2. Weldment Assembly replacement
3. Injector needle maintenance

v. The trainee will observe the basic use of ChemStation software as it relates to the Toxicology Unit's procedures.

b. Study questions:

i. Gas Chromatography

1. What is gas chromatography?
2. What is/are the stationary phases used in the Toxicology Unit?
3. What is an injection port liner? What is it made of? Why is it used?
4. Why is it necessary to regulate carrier gas flow? Are the GC methods typically constant flow or constant pressure?
5. What is column bleed?
6. When and why are columns conditioned? Describe the process.

ii. Mass Spectrometry

1. What is mass spectrometry?
2. What is the mode of ionization used in the Toxicology Unit?
3. Are the ions formed positive or negative?
4. Describe the difference between full mass scans and selective ion monitoring. Provide the advantages and disadvantages of each one.
5. Describe the importance of autotuning and explain the STune report. What criteria are considered to ensure a proper STune report? How is it different from an ATune?
6. Explain the following MS terms: mass to charge ratio, molecular ion, parent ion, base peak, total ion chromatogram, SIM, relative abundance and resolution.

iii. Instrument Maintenance and Troubleshooting

1. When should you cut the column and why?
2. What conditions would increase the frequency that a column would require cutting?
3. How much of the column should you cut? Is there a limit to how much you should cut and why?
4. What other maintenance could be performed if cutting the column doesn't improve the chromatography?
5. What is the gain factor?
6. Why are EM Volts adjusted when analyzing samples?
7. List the different ways of adjusting the EM Volts used to analyze samples. Describe advantages and disadvantages of each.
8. What is the purpose of the test shot? What standard should be used?
9. What parameters are checked in a test shot? How are they adjusted?
10. Please define, list possible causes, and remedies for the following:
   1. Split peak
2. Co-eluting peak
3. Flat-topped peak
4. Peak fronting
5. Peak tailing
6. No peaks
7. Baseline drift

5. **Assessment:**
   a. The trainee must complete the Gas Chromatography and Mass Spectrometry, and Instrument Maintenance and Troubleshooting questions and the Supervisor or designee will review and provide written feedback

6. **Documentation:**
   a. The completed questions and written feedback will be kept in the trainee's Training Binder
   b. A copy of the maintenance log(s) with a proper entry will be kept by the trainee after successful demonstration of routine maintenance
      i. Successful routine maintenance for the trainee is minimally defined as acceptable standard tune and analysis of samples after maintenance
      ii. The copy of the maintenance log must include the entry of the successful analysis of samples after maintenance

J. **Module X: Performing Extractions Part II: Liquid-Liquid Extractions (1-2 months)**
   1. **Topics of Study:**
      a. The trainee will learn how to perform liquid-liquid extractions to analyze case samples
      b. The trainee will study the following topics
         i. Liquid-Liquid Extractions
         ii. Reagents
         iii. Reference solutions
         iv. GC/MS
         v. Software
   2. **References:**
      a. FSD Safety Manual (SAF.01 to SAF.34, as applicable)
      b. Reference Materials (TOX.11)
      c. Lab Generated Solutions (TOX.12)
      d. Reagent Preparation (TOX.13)
      e. B-AMP/METH/MDA/MDMA (TOX.42)
      f. U-AMP/METH (TOX.46)
      g. U-GHB (TOX.50)
      h. B-GHB (TOX.51)
      i. GC/MS maintenance procedures (TOX.23 - TOX.34)
      j. Using the Software-Comparative Identifications (TOX.30)
      k. Using the Software-Quantitative Identifications (TOX.31)
      l. Using the Software-Sequences (TOX.32)
      m. LIMS Reporting Results (TOX.38)
      n. Chapter 7: Principles of Forensic Toxicology, 4th ed, Levine
      o. The Analysis of Drugs in Biological Fluids, 2nd ed, Chamberlain, pp.213-218; Chapter 12
3. Additional Resources:
   a. Agilent resources are available through the Agilent University
      i. Agilent University sample preparation (content may differ based on availability at the time of the
         training of each trainee)

4. Practical Exercises:
   a. Exercises:
      i. The trainee will observe the analysis of the samples using liquid-liquid extractions by a qualified
         analyst
      ii. The trainee will perform practice Liquid-Liquid extractions using non-casework samples
         1. Samples with unknown drug concentrations may be prepared by the trainer or designee
         2. Select extraction methods will be observed when possible at the discretion of the Supervisor or
            designee
         3. All extractions routinely in use by the unit will be required to be successfully performed by
            the trainee
            1. The supervisor will evaluate whether trainee should perform less common extractions
               based on the reason the extraction is not routinely performed and availability of
               standards, equipment and consumables required for the extraction
         4. All practice extractions must be entered in the Toxicology Database
         5. Extraction packets, regardless of results, must be created for all extractions according to the
            unit's procedures
         6. A successful extraction is defined as the following
            1. Chromatography and any other criteria used to evaluate extraction packets and
               casework must be acceptable within unit procedures (including retention times, ion
               ratios, peak shape and resolution, negative control, $r^2$ value)
            2. Each quantitative result obtained must fall within $\pm$ 20% of the expected target value
            3. Each qualitative result must be the same as the spiked samples
      iii. The trainee will analyze data using the ChemStation software and report macros
      iv. The trainer will review with the trainee:
         1. Liquid-Liquid Extraction procedures, techniques and theory
         2. Validation Binders
         3. ChemStation software and report macros
      v. At the discretion of the Supervisor or trainer, the trainee may be asked to make standards and QCs
         as part of the practice extraction practice process
   b. Liquid-Liquid Extraction Assessment Questions:
      i. List and describe chemical forces which drive the movement of solute between aqueous and organic
         phases.
      ii. Explain the effects of pH on each step in the Methamphetamine Urine liquid/liquid extraction.
      iii. Define the following terms: matrix, functional group, polarity, extraction solvents, internal standard.
      iv. Describe or draw the derivative formed using the Toxicology Procedures for methamphetamine in
          blood
      v. Why is there a need to derivatize the compound being analyzed?

5. Assessment:
   a. The trainee will complete the Liquid-Liquid Extraction questions and the Supervisor or designee will
      review and provide written feedback.
      i. The questions and practical exercises may be expanded upon by the Supervisor/Trainer or designee.
b. All extraction packets, regardless of results, must be compiled and reviewed by the Supervisor, trainer, or designee

c. A copy of all Toxicology GCMS Worksheets and Traceability Worksheets, generated by the Toxicology Database, will be kept in the trainee's Training Binder

d. The criminalist will receive written feedback from their trainer.

6. Competency:

a. The Test of Knowledge is an closed book test.

i. The criteria for evaluation will be a percentage of the total number of questions provided (i.e. 10 questions = 10 points per question). Trainee must receive ≥ 80% score on the Test of Knowledge to pass the written exam. Scores between 70-80% can be remediated with follow up clarification. Scores below 70% will be marked unsuccessful and will require documentation through a QA Action as well as further remedial training.

b. The Criminalist will be given a competency that consist of samples and must be completed according the unit's procedures

c. The Criminalist will be given a practical exercise for courtroom testimony covering liquid-liquid extractions

d. The Criminalist may begin performing liquid-liquid extraction casework after successful completion of competency and upon authorization from the Manager/Supervisor.

7. Documentation:

a. The following will be kept in the trainee's Training Binder

i. A copy of all Toxicology Electronic Signature Form, Toxicology GCMS Worksheet, and Traceability Worksheet from each practice extraction

ii. Copy of competency paperwork

K. Module XI: Performing Extractions Part III: Solid Phase Extractions (3-4 months)

1. Assessments and approval by the Supervisor and trainer must be obtained prior to the start of the module

a. The trainee must have a strong understanding and demonstration of the following:

i. GCMS routine maintenance and troubleshooting

ii. Matrix standard preparation

iii. Reagent preparation

iv. Other equipment use, including pipetting

v. Immunoassay cross reactivity

2. Objectives and Topics of Study:

a. The trainee will learn how to use solid phase extractions to analyze samples

b. The trainee will study the following topics regarding solid phase extractions

i. Solid Phase Extraction Procedures

ii. GC/MS

iii. Software

3. References:

a. GC/MS maintenance procedures (TOX.23 - TOX.34)

b. Individual methods/validation binders for Solid Phase Extractions

c. Individual Solid Phase Extraction procedures

d. Using the Software-Comparative Identifications (TOX.30)

e. Using the Software-Quantitative Identifications (TOX.31)

f. Using the Software-Sequences (TOX.32)
4. Additional Resources:
   a. Agilent resources are available through the Agilent University
      i. Agilent University sample preparation (content may differ based on availability at the time of training of each trainee)

5. Practical Exercises:
   a. Exercises:
      i. The trainee will observe solid phase extractions and analysis of samples by an analyst
      ii. The trainee will perform practice Solid Phase extractions using non-casework samples
         1. In most extractions, freshly prepared standards and QCs are necessary
         2. Samples with unknown drug concentrations may be prepared by the trainer or designated person
         3. Select extraction methods will observed when possible at the discretion of the Supervisor or designee
         4. All extractions routinely in use by the unit will be required to be successfully performed by the trainee
            1. The supervisor will evaluate whether trainee should perform less common extractions based on the reason the extraction is not routinely performed and availability of standards, equipment and consumables required for the extraction
         5. All practice extractions must be entered in the Toxicology Database
         6. Extraction packets, regardless of results, must be created for all extractions according to the unit's procedures
      iii. A successful extraction is defined as the following
         1. Chromatography and any other criteria used to evaluate extraction packets and casework must be acceptable within unit procedures (including retention times, ion ratios, peak shape and resolution, negative control, $r^2$ value)
         2. Each quantitative result obtained must fall within +/- 20% of the expected target value
         3. Each qualitative result must be the same as the spiked samples
      iv. The trainee will analyze data using the ChemStation software and report macros
      v. At the discretion of the Supervisor or trainer, the trainee's depth of knowledge regarding the ChemStation software may be assessed. Such knowledge may include but is not limited to:
         1. data collection times
         2. integration parameters and windows
         3. EM voltage adjustments
   b. Solid-Phase Extraction Questions:
      i. Solid Phase Extraction and Sample Preparation
1. Compare liquid-liquid and solid phase extractions stating the advantages and disadvantages of each type.

2. List and describe chemical forces (including pH) which effect the ability of the compound to interact with the SPE column.

3. List and explain the typical steps in an SPE extraction.

4. What is a mixed-mode SPE column?

5. Describe silylation and acylation.

6. Describe or draw the derivative formed using the Toxicology Procedures for benzoylecgonine in blood, morphine in urine, morphine and hydrocodone in blood (keto-opi extraction).

7. Why is there a need to use multiple derivatizing agents in the keto-opi extraction?

6. **Assessment:**

   a. The trainee will complete the Solid-Phase Extraction questions and the Supervisor or designee will review and provide written feedback
      i. The questions and practical exercises may be expanded upon by the Supervisor/Trainer or designee.
      ii. The criminalist will receive written feedback from their trainer.

   b. The trainer will again review GCMS troubleshooting and the use of ChemStation after the trainee has experience with solid phase extractions

   c. The trainer will review the LIMS software and toxicology module, utilizing designated test cases for the trainee's practice

   d. The trainee must complete all required practice runs successfully

   e. All extraction packets, regardless of results, must be compiled and reviewed by the Supervisor, trainer, or designee

7. **Competency:**

   a. The Test of Knowledge is an closed book test.
      i. The criteria for evaluation will be a percentage of the total number of questions provided (i.e. 10 questions = 10 points per question). Trainee must receive ≥ 80% score on the Test of Knowledge to pass the written exam. Scores between 70-80% can be remediated with follow up clarification. Scores below 70% will be marked unsuccessful and will require documentation through a QA Action as well as further remedial training.

   b. The Criminalist will be given a competency that consists of samples and must be completed according to the unit's procedures

   c. The Criminalist will be given a competency in the form a mock court exercise covering solid phase extractions in this module

   d. The Criminalist may begin performing designated solid phase casework after successful completion of competency and upon authorization from the Manager/Supervisor.

8. **Documentation:**

   a. The following will be kept in the trainee's Training Binder
      i. Questions with written feedback from Supervisor, trainer, or designee
      ii. A copy of all Toxicology GCMS Worksheets and Traceability Worksheets, generated by the Toxicology Database from each practice extraction
      iii. Copy of competency paperwork

L. **Module XII: Performing Extractions Part IV: Two Dimensional GCMS (1-2 months)**

1. Assessments and approval by the Supervisor and trainee must be completed prior to the start of the module

   a. The trainee must have a strong understanding and demonstration of the following
      i. GCMS routine maintenance and troubleshooting
      ii. Solid phase extractions
2. **Objectives and Topics of Study:**
   a. The trainee will learn how to use two dimensional GCMS to analyze case samples
   b. The trainee will study the following topics regarding 2D-GCMS
      i. LTM
      ii. Dean Switch
      iii. Solid Phase Extraction
      iv. Software

3. **References:**
   a. GC/MS maintenance procedures (TOX.23 - TOX.34)
   b. Solid Phase Extractions procedure for THC and metabolites (TOX.61)
   c. Using the Software-Quantitative Identifications (TOX.31)
   d. Using the Software-Sequences (TOX.32)
   e. Software (TOX.18)
   f. Case File Images (TOX.10)
   g. LIMS Reporting Results (TOX.38)

4. **Practical Exercises:**
   a. Exercises:
      i. The trainee will observe the THC and metabolite extraction by a qualified analyst
      ii. The trainee will observe 2D-GCMS maintenance and troubleshooting, if possible
      iii. The trainee will perform practice extraction(s) using non-casework samples
         1. Samples with unknown drug concentrations may be prepared by the trainer or designee
         2. All practice extractions must be entered in the Toxicology Database
         3. Extraction packets, regardless of results, must be created for all extractions according to the unit's procedures
      iv. A successful extraction is defined as the following
         1. Chromatography and any other criteria used to evaluate extraction packets and casework must be acceptable within unit procedures (including retention times, ion ratios, peak shape and resolution, negative control, \( r^2 \) value)
         2. Each quantitative result obtained must fall within +/- 20% of the expected target value
         3. Each qualitative result must be the same as the spiked samples
   b. 2D-GCMS Questions:
      i. 2D-GCMS
         1. Define the following:
            1. LTM
            2. Dean Switch
            3. 2D-GCMS
            4. FID
         2. What are some advantages using an LTM system with the 2D-GCMS Dean Switch?
         3. What is the purpose of the FID (in respect to our method)?
         4. What is the purpose of the Dean Switch?
         5. What is back-flushing? What are the advantages of back-flushing?
5. **Assessment:**
   a. The trainee will complete the 2D-GCMS questions and the Supervisor or designee will review and provide written feedback
      i. The questions and practical exercises may be expanded upon by the Supervisor/Trainer or designee.
      ii. The criminalist will receive written feedback from their trainer.
   b. The trainee must complete the 2D-GCMS questions and the Supervisor or designee will review and provide written feedback
   c. All extraction packets, regardless of results, must be compiled and reviewed by the Supervisor, trainer, or designee

6. **Competency:**
   a. The Test of Knowledge is an closed book test.
      i. The criteria for evaluation will be a percentage of the total number of questions provided (i.e. 10 questions = 10 points per question). Trainee must receive ≥ 90% score on the Test of Knowledge to pass the written exam. Scores between 80-90% can be remediated with follow up clarification. Scores below 80% will be marked unsuccessful and will require documentation through a QA Action as well as further remedial training.
   b. The Criminalist will be given a competency that consists of samples and must be completed according to the unit's procedures
   c. The Criminalist will be given a competency in the form of a mock court exercise covering 2D-GCMS
   d. The Criminalist may begin performing case work after successful completion of competency and upon authorization from the Manager/Supervisor.

7. **Documentation:**
   a. The following will be kept in the trainee's Training Binder
      i. Questions with feedback from Supervisor, trainer, or designee
      ii. A copy of all Toxicology Electronic Signature Form, Toxicology GCMS Worksheet, and Traceability Worksheets
      iii. Copy of competency paperwork

M. **Module XIII: Court Testimony (1 month)**

1. After completion of a module that requires competency testing, a trainee can perform casework in that respective area of analysis. Once a trainee begins casework, they are subject to testify on toxicology analysis. Each competency requires a practical exam for testimony/mock court.
   a. The Supervisor will determine the scope of each mock court
      i. Each mock court will be documented by the Supervisor in writing; signed and reviewed with the trainee
      ii. Each individual mock court will cover the subject of the competency, but may include subject matter from previously completed modules
   b. The trainee will keep a copy of the mock court results

2. **Objectives and Topics of Study:**
   a. The trainee will learn how to present their analysis in court and important court decisions regarding forensic science
   b. The trainee will study the following topics regarding courtroom testimony for toxicology analysis:
      i. Toxicology Unit and Forensics Services Division Court Practices
      ii. Legal Aspects in Forensic Science
      iii. Legal Proceedings

3. **References:**
   a. Court Testimony Monitoring (FSD.26)
b. Case Record (FSD.42)

c. Discovery Request for Records (FSD.45)

d. Court Testimony and Proficiency Testing (TOX.15)

e. Outside Laboratory Analysis and Discoveries (TOX.56)

g. Chapter 1: Forensic Science Handbook, Volume III, Saferstein

h. Chapter 23: Garriott's Medicolegal Aspects of Alcohol, 6th ed, Caplan and Goldberger

   i. Chapter 19: Introduction to Forensic Toxicology, crave and Baselt; reprint of original Kogan article with modifications

4. Additional Resources:

a. The California Criminalistics Institute offers a course on the Courtroom Presentation of Evidence

   i. Equivalent courses may be available

b. Additional public speaking forums as also useful for court testimony

   i. Toastmasters

   ii. Presentations on Forensic Science

   iii. Teaching other topics of Forensic Science

5. Court Decisions: Summaries and basic applications of select court decisions are covered in the above reading.
For further, in-depth knowledge the trainee may need to seek additional references and resources

a. United States v. Frye

b. Daubert v. Merrell-Dow

c. Kumho Tire Co v. Carmichael

d. General Electric v Joiner

e. Melendez Diaz v. Massachusetts

f. Brady v. Maryland

g. Missouri v. McNeely

6. Practical exercises:

a. Exercises:

   i. The trainee should observe relevant testimony by Forensic Services Division Criminalists

      1. The trainee may also complete Court Critiques

   ii. Review all question sets completed in prior modules

   iii. The trainee should review pertinent sections of the following

      2. California Health and Safety Handbook

      3. Immunoassay Plate (Manufacturer) information

b. Court Testimony Questions:

   i. Write a brief summary of each court decision and how it applied to Forensic Science and Forensic Toxicology

      1. United States v. Frye

      2. Daubert v. Merrell-Dow

      4. General Electric v Joiner
5. Melendez Diaz v. Massachusetts
6. Brady v. Maryland
7. Missouri v. McNeely

7. **Assessment:**
   a. The trainee will complete the questions and the Supervisor or designee will review and provide written feedback
      i. The questions and practical exercises may be expanded upon by the Supervisor/Trainer or designee.
      ii. The criminalist will receive written feedback from their trainer.

8. **Documentation:**
   a. The following will be signed and dated by a Supervisor and kept in the trainee's Training Binder, if applicable
      i. Mock court evaluations after feedback has been given
      ii. Questions with feedback from the Supervisor, trainer, or designee

III. **Use of OneNote as an Electronic Binder (Optional)**

A. Microsoft OneNote is available through Microsoft 365 login. There is a desktop app and a browser based version. Appearance and functionality differs slightly between the versions.

1. Information is organized by tabs and pages, much like a traditional binder.
2. The creator of the binder can invite others to view the binder. Anyone who will need to add comments or other content to the binder (including the trainer, trainee and supervisor) must have edit rights.
   a. When first invited to a binder, it will usually open through OneNote Online (requiring password login to Microsoft 365).
      i. The toolbar near the top of the webpage has a button: "Open in OneNote". This will enable use of the desktop app.
   b. The binder should automatically sync new information regardless of which version is used. If information appears to be missing, check the "Sync Status" from the file menu. This also allows the user to initiate a sync manually.
3. In addition to adding text, OneNote can add files, images and screen clippings from the Insert toolbar.
   a. If a file is inserted as a printout, the text within the file will be searchable.
   b. If a file is added, it is inserted as a copy of the file at the time of attachment. It will not be updated if the original file is changed.
4. OneNote automatically tracks who enters what information and when. This is based on the Microsoft 365 login identity.
   a. Information can be found by right clicking on the text within a page. At the bottom of the box that pops up is the identity of the person who added the text and when.
   b. The authorship of items added can also be displayed by every entry. This is enabled through the History toolbar: Show/Hide Authors. (The items for the logged in author may not be marked).
   c. Tabs and Pages that have changed will appear in bold. New text will be highlighted on pages.
      i. This will return to normal once the page has been viewed.
   d. The History Toolbar can also be used to find changes within a specified period or by a specific author and to jump directly to new (unread) items.
5. Items can be tagged to highlight or categorize them. (This functionality may be more limited in the browser based version).
   a. Default tags include "To Do" or "Discuss with" check-boxes
   b. Default flags include Important, Question, Critical
   c. Tags can be added from the Home toolbar or by right-clicking on a page and selecting the tag icon
d. Search for Tags by going to the Home menu and selecting "Find Tags"

END OF DOCUMENT
I. THC and METABOLITES IDENTIFICATION AND QUANTITATION IN BLOOD

A. SAFETY - SAFETY WARNING!
   1. Bis (trimethylsilyl trifluoroacetamide (BSTFA) w/ 1% TMCS is a suspected human carcinogen. Ammonium hydroxide and Acetic Acid are caustic reagents. Human blood is a biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items are required while using this procedure:
      a. lab coat/protective clothing
      b. protective gloves
      c. safety glasses/hood
      d. Safety Data Sheets for more information.

B. PRINCIPLE
   1. Delta-9-tetrahydrocannabinol (THC) and two metabolites, 11-hydroxy-THC (OH-THC) and 11-carboxy-THC (C-THC), are recovered from blood by a solid phase extraction procedure using deuterated internal standards. Identification and quantitation is by two dimensional gas chromatography/mass spectrometry.

C. SPECIMEN REQUIREMENT
   1. 1.5 milliliters of sample is used for the analysis.

D. DETECTION LIMIT
   1. The limit of detection for this procedure is 1 ng/ml for THC and 3 ng/mL for OH-THC and C-THC.

E. QUANTITATION LIMIT
   1. The analytical limit of quantitation for this procedure 2 ng/mL for THC, 5 ng/mL for OH-THC and 10 ng/mL for C-THC.
   2. The reporting limit for this procedure is 2 ng/mL for THC, 5 ng/mL for OH-THC and 10 ng/mL for C-THC.

F. LINEAR RANGE
   1. The linear range has been established from 2-44 ng/mL for THC, 5-110 ng/mL for OH-THC and 10-220 ng/mL for C-THC.

G. CARRYOVER
   1. No significant carryover is present at 1000 ng/mL for all analytes.

H. EQUIPMENT
   This procedure uses the following laboratory equipment and supplies:
   1. 16 x 100 mm disposable silanized glass culture tubes with screw caps
   2. 13 x 100 mm disposable silanized glass tubes with teflon lined caps
   3. volumetric flasks
   4. glass transfer pipettes
   5. 2-20 mL pipettor and disposable pipette tips
   6. 20-200 mL pipettor and disposable pipette tips
   7. 10-1000 mL pipettor and disposable pipette tips
8. 500-2500 mL pipettor and disposable pipette tips
9. 500-5000 mL pipettor and disposable pipette tips
10. repeat pipettor and disposable tips (0.5 mL, 1.25 mL, 2.5 mL, 5 mL, 50 mL)
11. autosampler vials with deactivated volume reducing inserts and crimp caps
12. vortex mixer (Thermolyne or equivalent)
13. specimen rocker (LabQuake Shaker or equivalent)
14. centrifuge (IEC Centra-4B or equivalent)
15. solid phase extraction columns, SPEware PolyCrom THC
16. solid phase extraction manifold (vac-elut)
17. evaporator/heating module
18. gas chromatograph/mass spectrometer with Dean Switch and LTM

I. CHEMICALS
This procedure uses the following chemicals:
1. ammonium hydroxide, concentrated, reagent grade CAUTION IRRITANT
2. hexane, reagent grade
3. methanol, reagent grade
4. bis(trimethylsilyl)trifluoroacetamide (BSTFA) w/ 1% trimethylchlorosilane
5. glacial acetic acid, reagent grade CAUTION IRRITANT
6. dry nitrogen gas (N2)
7. ethyl acetate, HPLC grade
8. acetonitrile, reagent grade
9. ethyl acetate, reagent grade

J. STANDARDS
All standards, calibrators, and controls are prepared in appropriate volumetric flasks, utilizing calibrated pipettes. Directions and volumes used for preparation of calibrators are given for an assumed concentration (e.g. listed in catalog). The certified concentration, provided by the manufacturer on the certificate of analysis (COA), should be used in the preparation of solutions from an ampule. The volumes needed to achieve the final concentration of the calibrator or control should be calculated using the certified concentration from the certificate, not an assumed concentration for the ampule. Ampule concentrations may also change due to vendor availability or laboratory preference and a stock solution may not need to be prepared. Standards should be made in blood that does not have an interfering plasticizer (see COMMENT).

1. **Stock standards**: Stock standards may be stored in freezer. The remaining standards from the ampules can be stored separately in appropriately labeled vials in the freezer for later use.
   a. **stock internal standard**: 5 µg/ml THC-D3/OH-THC-D3
      Prep: Draw 0.5 mL of 100 µg/mL of each ampule and dilute to 10 mL with methanol
   b. **stock internal standard**: 5µg/mL C-THC-D9
      Prep: Draw 0.5 mL of 100 µg/ml ampule and dilute to 10 mL with methanol
   c. **stock calibration standard**: 100 µg/mL THC in methanol
      Prep: Draw 0.5 mL of 1 mg/mL ampule THC standard and dilute to 5 mL with methanol
   d. **stock calibration standard**: 100 µg/mL C-THC, OH-THC
      Prep: 100 µg/mL ampule each standard
   e. **stock QC standard**: 100 µg/mL THC, OH-THC, C-THC
      Prep: 100 µg/mL ampule each standard, if available. If a 100µg/mL ampule is unavailable, draw 0.5 mL of a 1 mg/mL ampule for each analyte needed and dilute to 5 mL with methanol

2. **Working standards**:
   a. working internal standard: 0.125 µg/mL THC-D3/OH-THC-D3, 0.250 mg/mL C-THC-D9 in distilled water
Prep: 0.25 mL of THC-D3/OH-THC-D3 stock internal standard and 0.5 mL C-THC-D9 stock internal standard, dilute to 10 mL with distilled water

b. working calibration standard: 1 µg/mL THC, 2.5 µg/mL OH-THC, 5 µg/mL C-THC in methanol
   Prep: 0.1 mL of THC stock, 0.25 mL of OH-THC stock and 0.5 mL of C-THC stock calibration standard, dilute to 10 mL with methanol

c. working QC standard: 1 µg/mL THC, 2 µg/mL OH-THC, 5 µg/mL C-THC in methanol
   Prep: 0.1 mL of THC stock, 0.2 mL of OH-THC stock and 0.5 mL of C-THC stock QC standard, dilute to 10 mL with methanol

3. Calibrators and Controls:
   a. LOQ - 2 ng/mL THC, 5 ng/mL OH-THC, 10 ng/mL C-THC calibrator
      Prep: 20 µL working calibration standard, add 1 mL DI water, dilute to 10 mL with blank blood
   b. LOW - 10 ng/mL THC, 25 ng/mL OH-THC, 50 ng/mL C-THC calibrator
      Prep: 100 µL working calibration standard, add 1 mL DI water, dilute to 10 mL with blank blood
   c. MED - 20 ng/mL THC, 50 ng/mL OH-THC, 100 ng/mL C-THC calibrator
      Prep: 200 µL working calibration standard, add 1 mL DI water, dilute to 10 mL with blank blood
   d. HIGH - 30 ng/mL THC, 75 ng/mL OH-THC, 150 ng/mL C-THC calibrator
      Prep: 300 µL working calibration standard, add 1 mL DI water, dilute to 10 mL with blank blood
   e. QC 1: 5 ng/mL THC, 10 ng/mL OH-THC, 25 ng/mL C-THC
      Prep: 50 µL working QC standard, add 1 mL DI water, dilute to 10 mL with blank blood
   f. QC 2: 15 ng/mL THC, 30 ng/mL OH-THC, 75 ng/mL C-THC
      Prep: 150 µL working QC standard, add 1 mL DI water, dilute to 10 mL with blank blood
   g. QC 3: 25 ng/mL THC, 50 ng/mL OH-THC, 125 ng/mL C-THC
      Prep: 250 µL working QC standard, add 1 mL DI water, dilute to 10 mL with blank blood

Note: It is within the discretion of the analyst whether to use a high, medium, or low QC. Two different QC concentrations are necessary when analyzing 11-20 case samples.

K. REAGENTS
Reagents can be prepared before the extraction day. The elution solution and wash solution must be made the day of analysis.

1. cold acetonitrile
   Prep: acetonitrile below 0°C. Acetonitrile can be stored in a freezer. Acetonitrile can also be placed in -70°C freezer approximately one hour before use (acetonitrile cannot be stored in the -70°C freezer as it will freeze solid)

2. wash solution: basic water/acetonitrile
   Prep: 15 mL acetonitrile and 1 ml ammonium hydroxide to a 100 mL volumetric flask, QS with DI water. Invert flask several times to mix.

3. elution solution: acidic hexane/ethyl acetate (90:10)
   Prep: 10 mL ethyl acetate (reagent grade) to a 100 mL volumetric flask and QS with hexane. Invert flask several times to mix. Transfer solution to bottle with cap. Add 3 mL glacial acetic acid. Cover and sonicate for 10 minutes.

L. FID CHECK
1. Prior to sample analysis using the SIM method, retention times for dean switch parameters can be checked using the FID method. The FID check may be performed concurrently with the extraction procedure.
   a. Add 0.5 ml of working calibration standard to a silanized 13x100 vial.
   b. Evaporate the sample to dryness under a stream of N2 at 40°C.
   c. Remove tubes from the heating module. Add 50 µL ethyl acetate (HPLC grade) and 50 µL BSTFA (w/ 1% TCMS).
   d. Cap tube with teflon lined caps and vortex for 10 seconds. Heat at approximately 70°C for 30 minutes.
   e. Remove sample and allow to cool to room temperature. Transfer to labeled autosampler vial with deactivated volume reducing inserts. Cap vial.
   f. Run on the FID method, BLTHCFID.M and compare retention times to previous analysis.
g. Save a copy of the chromatogram in the FID folder. (This can be done by printing through Justice Trax Imaging). Name the file by the date of sample.

M. **EXTRACTION PROCEDURE**
The target drugs are extracted from the blood samples using the following procedure:

1. Prepare and label disposable (16 x 100 mm) silanized culture tubes for each calibrator, quality control, sample, and blank blood.
2. Add 200 µL of working internal standard to each tube.
3. Add 1.5 ml of calibrators, quality control, blank and case samples to be analyzed into the corresponding labeled tube.
4. While vortexing, add 3 ml cold acetonitrile dropwise.
5. Vortex for an additional minute.
6. Centrifuge at approximately 3000 rpm for 5 minutes.
7. Add 3 ml DI water to labeled 16x100 silanized tubes.
8. Transfer acetonitrile from each tube to corresponding 16x100 tubes. Vortex.
9. Centrifuge at approximately 3000 rpm for 5 minutes.
10. Place the solid phase extraction columns (Cerex PolyCrom-THC) on the vac-elut.
11. Transfer samples from each tube to the appropriately labeled column. Allow the samples to pass through the column under gravity.
12. Rinse each column under vacuum of 1-2 mm Hg: 1.0 ml wash solution (1x)
13. Dry columns under full vacuum (10-15 mm Hg) for at least 15 minutes. Make sure that the columns and the fluid path are dry.
14. Remove the top of the vac-elut and set aside. Be careful not to disturb any columns.
15. Rinse out the canister and dry. Place rack with labeled (13 x 100 mm) silanized culture tubes into vac-elut. Place the top back on vac-elut ensuring that the tubes are in the collecting position.
16. Add 3 ml of the elution solution and allow the elution solvent to pass through the column without vacuum.
17. Evaporate the samples to dryness under a stream of N2 at 40°C.
18. Remove tubes from the heating module and allow samples to cool to room temperature. Add 30 µL ethyl acetate (HPLC grade) and 30 µL BSTFA (w/ 1% TCMS) to each tube.
19. Cap tubes with teflon lined caps and vortex for 10 seconds.
20. Heat at approximately 70°C for 30 minutes.
21. Remove samples and allow to cool to room temperature.
22. Transfer to labeled autosampler vials with deactivated volume reducing inserts. Cap vials.

N. **GC/MS Method and Parameters for Analysis**
1. Analyze the batch by 2D-GC/MS (dean switch instrument) using the SIM method.
   a. Method: BLTHCSIM
2. **Ions Monitored:**
   - THC-D3  374, 389
   - THC  371, 386, 343
   - OH-THC-D3 374, 375
   - OH-THC  371, 474, 459
   - C-THC-D9  380, 479
   - C-THC  371, 473, 488

O. **Order of Batch Analysis**
The order of analysis:
1. blank blood
2. LOQ calibrator
3. LOW calibrator
4. MED calibrator
5. HIGH calibrator
6. QC
   a. If analyzing more than ten case samples, an additional QC should be added for every ten additional case samples. For example: If analyzing 11-20 case samples, one QC can be placed prior to case samples and one placed after the samples.
   b. Solvent wash and blanks: ethyl acetate, reagent grade

P. DATA INTERPRETATION
   1. In order for the quantitative values to be reported, the following quality control criteria should be met:
      a. curve fit is quadratic with inverse of concentration weighting, with “r2” value of .96 or higher
      b. ion ratios within specified range +/- 20% (absolute)
      c. standard and QC quantitation values within +/- 20% of known value
      d. retention times +/- 3% of calibration standard retention times
      e. sufficient peak shape and resolution
      f. blank/negative control has a quantitative value less than LOQ

Q. Qualitative Reporting
   1. If any of the QC quantitative values is not within +/- 20% of known value, the sample may be reported qualitatively. To report a sample as positive (+) the calculated concentration from Chemstation for the sample must be greater than the run cutoff (lowest concentration standard). The following criteria must also be met:
      a. ion ratios within specified range +/- 20% (absolute)
      b. retention times +/- 3% of calibration standard retention times
      c. sufficient peak shape and resolution
      d. blank/negative control has a quantitative value less than lowest concentration standard

R. COMMENTS
   1. Blood collected into plastic bags (as for blood bank collection) may contain an interfering compound for OH-THC. Blood collected with the laboratory’s blood collection kit will not have this interfering substance. Blood used for the extraction should come from a known source or have been checked for the presence of an interferent.
   2. Cannabinoids can bind to glass or plastic surfaces. Care should be taken to minimize unnecessary transfers or prolonged contact with plastic surfaces.
   3. If hospital vials are submitted, it is recommended to avoid using samples from wax separator tubes. The wax plug may adsorb cannabinoids.
   4. Due to the low solubility of THC in water, it is important that stock and working solutions are made in methanol until added to matrix.
   5. For diluted samples, blank blood should be added to give a total volume of 1.5 ml.
   6. Room temperature can effect the retention time of peaks through the transfer lines on the second column in the 2D GC analysis. When samples are to be run during off-hours, environmental controls should be initiated or maintained.
      a. Samples will be evaluated after analysis to ensure method criteria has been met for reference standards and case samples.

END OF DOCUMENT
I. The Toxicology Unit has quality procedures in place to ensure the reliability of test results.

A. Assuring the Quality of Test Results
   1. The procedure for monitoring the validity and quality of test results are ensured using the following:
      a. Regular use of reference materials water-ethanol quality control samples, with defined tolerance limits for quantitative purposes. See TOX.11
      b. Periodic use of quality control samples, with defined tolerance limits. See individual extraction procedures and TOX.08
      c. Functional check(s) of measuring and testing equipment. See individual extraction procedures and TOX.24 through TOX.31
      d. Use of check or working standards and controls with control charts. See TOX.62 measurement assurance
      e. Intermediate checks on measuring equipment. See TOX.17, TOX.19, TOX.20
      f. Replicate tests or calibration using the same or different methods. See individual extraction methods and TOX.40
      g. Review of reported results. See FSD.17 and TOX.14
      h. Intralaboratory comparisons. See TOX.15
      i. Technical and administrative review. See TOX.14
   2. Procedures and Test Methods
      a. All test methods for toxicology analysis are within each individual extraction method and the screening immunoassay method in TOX.35
      b. Data interpretation procedures are located in individual extraction methods and TOX.35
      c. All methods, procedures, software and equipment are validated prior to performing casework. See TOX.16
      d. Instructions for the use and proper operation of equipment is located in (TOX.30, TOX.31, TOX.32, and TOX.35) and handling of evidence TOX.07
      e. Sampling procedures are located in TOX.41
      f. The comparison of an unknown to a known require the evaluation of the unknowns items to identify characteristics suitable for comparison. Requirements for comparisons can be found in each individual extraction methods, TOX.35, and TOX.41
   3. Environmental Conditions
      a. Environmental factors that may influence results can be found in TOX.24 due to the sensitivity in temperature of the GC/MS equipped with the Dean Switch
      b. Other items are as follows:
         i. For access to and use of areas affecting laboratory activities, see FSD.32
         ii. Prevention of contamination, interference, or adverse influences on laboratory activities, see TOX.07 and TOX.58
         iii. Effective separation of work areas with incompatible laboratory activities
1. There is an effective separation between the Drug Unit that deals with solid dosage quantities of drugs and the Toxicology Unit which measures minute quantities in blood/urine samples. Both work areas are at opposite ends of the laboratory.

2. There are separate air conditioning units and vents that control air flow through each of these work areas.

   iv. Incorporating good housekeeping measures within the laboratory, see TOX.07

   v. Other than what is mentioned above, there are no other environmental conditions in the technical requirements for toxicology testing that need to be documented or monitored.

4. Regular use of certified reference materials for quantitation purposes, if available
   a. Regular use of quality control samples with tolerance limits
   b. Participation in proficiency tests
   c. 100% technical review of casework

5. If any issues arise from monitoring the quality control procedures listed above, the Supervisor or Manager will make a determination of the extent of the problem and take planned action. The following includes some, but not all, planned actions to correct any significant technical problems:
   a. If reference materials are found to be unacceptable due to deterioration or contamination they will not be used for casework.
   b. If a significant technical issue arises from the results of proficiency testing, the Supervisor or Manager will determine the extent of the issue, and if necessary open a corrective action to ensure incorrect results are not reported in casework.
   c. If a significant technical issue arises from 100% technical review of casework, the Supervisor or Manager will determine the extent of the issue and may open a corrective action that may entail: halting casework, retraining of an analyst, or rewriting of procedures. If the issue is not technically significant, the analyst will be given back the case for correction to ensure the correctness of test results.

6. The use of Quality Control and Standards are specified in the procedure, and their use is recorded in the case record. See individual extraction procedures and TOX.08 respectively.

7. Quality Control samples will be recorded in a manner where trends are detectable and the data will be reviewed statistically. See Measurement Assurance below for the procedures.

B. Measurement Assurance

1. **General Information**:
   a. Measurement Assurance should be performed quarterly.
   b. The evaluation should include the previous three months of data. Longer or shorter time periods may be evaluated depending on the number of data points available or in an attempt to identify trends.
   c. Excel software may be used to perform an automated retrieval and charting of data, however statistical analysis may be performed using other software as well (eg. Minitab). The instructions included are for using Excel.
   d. The measurement assurance should be documented and maintained within the unit.
   e. If there is a change in the measurement process or the measurement instruments, the quarterly measurement assurance will be evaluated to determine if the changes are significant enough to require a full budget reevaluation.

2. **Instructions**:
   a. The template for the excel workbook is located in the Toxicology Unit network share folder (MA archive). Make a copy of the “autoMA template.xls” file. Rename as desired (eg. Tox MA Jan-Mar 2012). Workbooks may be archived in folders by year.
   b. Open the new workbook.
      i. At startup, there should be a security warning. Select “Enable Macros”. Macros must be enabled for the buttons to work.
      ii. If the security has been set to high, you may not have the option to Enable Macros. Go to Tools > Options>Security to change the Macro Security to Medium. Reopen the file, if necessary.
c. A dialog box will then ask about linked data sources. Select update to get the current historical standard deviation.

d. There are worksheets for each analyte and extraction. In addition, there is the “Main” worksheet and a “Charts” worksheet.

e. To get data for all analytes, select the “Main” worksheet:
   i. Enter the desired date range in the Start and End Date cells. Click “update all”
   ii. The macro will copy the date range from the “Main” sheet to the date range on the individual worksheet, delete old data, query the traceability database, import the QC results into the excel worksheet and plot the data points on a chart. This will be done for all worksheets.

f. To work with a single analyte, select that worksheet (eg. Amp-blood). There are two buttons on each worksheet:
   i. “Import Data” will delete old data, query the traceability database using the date range on that sheet, import QC results into the excel worksheet and plot the data points on a chart. The date range used here effects only that worksheet, but will be overwritten if the “Update All” button is used.
   ii. “New Plot” will create a new chart without reimporting data from access.

g. The chart has lines at intervals of the historical standard deviation.

h. Additional information can be included on the individual worksheets. General information can also be included on the “charts” worksheet.

i. A worksheet without any data means there was no data available from the database. Leave the blank worksheet to document that no analysis was performed during the time period.

j. When opening archived workbooks for review, do not update links.

3. Evaluation:
   a. Evaluate the % difference of the QC samples from the target value against the historical standard deviation of the QC’s for that analyte and method. The limit lines correspond to intervals of the standard deviation (±1, 2, 3). This evaluation should be performed for each analyte of each extraction procedure.
   b. If no analysis was performed for a specific analyte during the time period, that should be documented.

4. Criteria:
   a. If points fall beyond the 3rd limit line, then a written explanation should be included with the measurement assurance documentation. The written explanation should address potential sources of variation and actions taken, if necessary.
   b. The run criteria for QC is ±20%, however the SD varies for different analytes. The 3 SD limit may be above or below this criteria. If a single QC value exceeds the 3 SD limit, but is within 20% criteria, no action may be required.
   c. If multiple points are outside of 3 SD, then evaluation of additional data (longer time period, comparisons between lots) may be performed to evaluate if it is part of trend or due to changes in variation.
   d. Possible sources of variation that may be evaluated include:
      i. Typographical errors
      ii. Potential issues with the QC or standards related to the stability pf different lots, etc.
      iii. Recent calibrations or repairs to equipment or instruments
      iv. New solutions (eg. chemicals, reagent, stock, matrix – QC or standards)
      v. Issues with one analyst or a specific method/analyte
      vi. Certified concentration of original ampule
   e. Possible actions to be taken:
      i. Discard remaining solution from a lot
      ii. Notify Supervisor/Manager that the uncertainty budget may need to be evaluated
      iii. Calibrate related equipment

C. QA Action-Correction (QAC)
1. **Non-conformity**: Any aspect of testing or work product that does not conform to laboratory policies, procedures or the agreed requirements of the customer.
   a. See [FSD.15](#) for reporting instances of non-conforming work and elements of QA Action-Corrections

2. **QA Correction-1 (QAC-1, Level 1)**: QAC-1 is an action taken to correct a problem or error resulting in erroneous results or conclusions issued for casework, proficiency testing or court testimony, when evidence is compromised or if the problem or error could recur. Examples of non-conformities that would likely immediately rise to a QAC-1:
   a. Result reported incorrectly to a customer
   b. Proficiency test results reported incorrectly
   c. Courtroom testimony is misleading
      i. These issues must be documented immediately by a Supervisor/Manager through the Corrective Action Procedure that must be followed; the correction should be made as soon as possible. The action may involve stopping casework, re-training, competency testing, re-writing procedures, etc.

3. **QA Correction-2 (QAC-2, Level 2)**: QAC-2 is an action taken to correct a non-conformity that does not rise to the level of a QAC-1, but that is more significant than a simple correction (QAC-3). QAC-2 are actions made to prevent non-conformities in casework from being reported.
   a. See [FSD.15](#) for examples as well as:
      i. Quality controls not giving expected results
      ii. Standards not giving expected results (e.g. the STD's not passing criteria)
      iii. Inappropriate storage of reagents or controls (e.g. left unrefrigerated) when it is subsequently demonstrated its use did not affect the validity and accuracy of the test result.
      iv. Persistent problems identified during checking of reports (this would be documented by Tech Review)
      v. Unsuccessful runs
   b. QAC-2 will be documented, and maintained in the Toxicology Unit (may be electronic). The documentation will be evaluated by a Supervisor/Manager periodically. The supervisor will evaluate for issues or patterns of problems that may need to be elevated to Corrective Actions. The analyst is responsible for documenting:
      i. a brief description of the problem or issue (define or state the problem)
      ii. any troubleshooting or evaluation undertaken to solve the problem or issue (or to prevent the problem or issue from happening again). Troubleshooting is a form of problem solving; it is a logical, systematic search for the potential source of a problem in order to solve it. Determining the most likely cause is a process of elimination—eliminating potential causes of a problem (determine the most likely cause of the problem)
      iii. a brief description of the resolution (or actions taken) to remedy the problem or issue (take appropriate action to prevent its recurrence)

4. **QA Correction-3 (QAC, Level 3)**: QAC-3 is an action taken to correct a non-conformity when the significance of the non-conforming work is minimal and is unlikely to reoccur. The action may or may not be documented. Examples may include:
   a. Typographical error or data entry error that can be fixed before released
   b. Inadvertently screening for analytes

END OF DOCUMENT
I. Title

Benzodiazepine Qualitative IDENTIFICATION IN BLOOD

A. Safety

Bis (trimethylsilyltrifluoroacetamide (BSTFA) w/ 1% TMCS is a suspected human carcinogen. Ammonium hydroxide is a caustic reagent. Human blood is a biohazardous material capable of transmitting disease. Confine work to a biological safety hood. The following items are required while using this procedure:

1. lab coat/protective clothing  
2. protective gloves  
3. safety glasses/hood  
4. Consult the Safety Data Sheets for more information.

B. Principle

Seventeen benzodiazepine compounds are recovered from blood by a solid phase extraction procedure using deuterated internal standards. Identification is by gas chromatography/mass spectrometry.

C. Specimen Requirement

Two milliliters (2 mL) of sample is used for the analysis.

D. Detection Limit

The limit of detection for this procedure is:

<table>

F. **Equipment**

This procedure uses the following laboratory equipment and supplies:

1. 16 x 125 mm disposable glass culture tubes with screw caps
2. 13 x 100 mm disposable glass tubes with teflon lined caps
3. various volumetric flasks
4. plastic transfer pipettes
5. 2-20 mL pipettor and disposable pipette tips
6. 20-200 mL pipettor and disposable pipette tips
7. 10-1000 mL pipettor and disposable pipette tips
8. 500-2500 mL pipettor and disposable pipette tips
9. repeat pipettor and disposable tips (1.25 mL, 2.5 mL, 5 mL, 50 mL)
10. autosampler vials with volume reducing inserts and crimp caps
11. vortex mixer (Thermolyne or equivalent)
12. specimen rocker (LabQuake Shaker or equivalent)
13. centrifuge (IEC Centra-4B or equivalent)
14. solid phase extraction columns, SPEware Polycrom Clin II
15. solid phase extraction manifold (vac-elut)
16. evaporator/heating module
17. gas chromatograph/mass spectrometer

G. **Chemicals**

This procedure uses the following chemicals:
1. ammonium hydroxide, concentrate, reagent grade **CAUTION IRRITANT**
2. methanol, reagent grade
3. isopropanol, reagent grade
4. sodium acetate
5. glacial acetic acid, reagent grade
6. hydrochloric acid, concentrate, reagent grade **CAUTION IRRITANT**
7. dry nitrogen gas (N2)
8. ethyl acetate, HPLC grade
9. potassium carbonate
10. potassium bicarbonate
11. hexane, reagent grade
12. bis(trimethylsilyl)trifluoroacetamide (BSTFA) w/ 1% trimethylchlorosilane
13. ethyl acetate, reagent grade

H. **Standards**

All standards, calibrators, and controls are prepared in appropriate volumetric flasks. Stock standards may be made individually or analytes may be combined.

1. Stock standards:
   a. stock standards: 100 µg/mL or 1 mg/ml ampules of each analyte concentration and solvent varies with analyte
   b. stock internal standard:
      Prep: take specified volume from 100 µg/mL ampule for each analyte, dilute to 10 mL with methanol

2. Working standards:
   a. working standard:
      i. Confirm ampule (stock) concentrations and volumes to dispense against table below.
      ii. In the event the stock concentration varies from the concentration indicated in the table, the volume dispensed will need to be adjusted accordingly to obtain the desired final concentration (A ten-fold decrease in the concentration will require a ten-fold increase in volume dispensed to deliver the same amount of analyte).

Prep: add specified volume of each stock standard to approximately 3 ml methanol, and dilute to 10 mL with distilled water

I. Reagents

Reagents can be prepared before the extraction day. The elution solution must be made the day of analysis.

1. carbonate buffer, pH 9.0
   see reagent recipes

2. elution solution ethyl acetate with 3% NH4OH
   Prep: Add 3 mL concentrated ammonium hydroxide to a 100 mL volumetric flask and QS with ethyl acetate. Invert flask several times to mix. Transfer solution to bottle with cap. Cover and sonicate for 10 minutes.

3. organic wash solution (97.5:2.5) hexane/isopropanol
   Prep: 2.5 mL isopropanol to a 100 mL volumetric flask and QS with hexane. Invert flask several times to mix.

4. 0.1M acetate buffer, pH 4.0
   see reagent recipes

J. Extraction Procedure

The target drugs are extracted from the blood samples using the following procedure:

1. Prepare and label disposable (16 x 125 mm) culture tubes for each calibrator, quality control, sample, and blank blood.

2. Add 25 µl of stock internal standard to each tube.

3. Add 1.0 mL of DI water.

5. Add 2.0 ml of controls, blank and case samples to be analyzed into the corresponding labeled tube.

6. Cap tubes and vortex

7. Centrifuge at approximately 3000 rpm for 5-10 minutes.
   a. It may be necessary to repeat centrifugation. If desired, transfer supernatant to an appropriately labeled (16 x 125 mm) culture tube and centrifuge at approximately 3000 rpm for an additional 5-10 minutes.

8. Place the solid phase extraction columns on the vac-elut.

9. Transfer samples from each blood tube to the appropriately labeled column. Allow the samples to pass through the column under gravity, if possible. Vacuum may be required for slow moving samples.

10. Prepare the elution solution and wash solution.

11. Rinse each column under vacuum of 1-2 mm Hg:
   a. 3.0 ml pH 9.0 buffer (1x)
   b. 3.0 mL distilled water (1x)

12. Dry columns under full vacuum (10-15 mm Hg) for at least 15 minutes. It is important that the columns are dry!

13. Add 3 mL organic wash solution.

14. Dry columns under full vacuum, approximately 5 minutes.

15. Remove the top of the vac-elut and set aside. Be careful not to disturb any columns.
16. Rinse out the canister and dry. Place rack with labeled (13 x 100 mm) culture tubes into vac-elut. Place the top back on vac-elut ensuring that the tubes are in the collecting position.

17. Add 3 ml of the elution solution and allow the elution solvent to pass through the column **without** vacuum.

18. Evaporate the samples to dryness under a stream of N2 at approximately 40°C.

19. Remove tubes from the heating module and allow samples to cool to room temperature. Add 50 mL ethyl acetate (HPLC grade) and 50 mL BSTFA to each tube.

20. Cap tubes with teflon lined caps and vortex for 10 seconds.

21. Heat at approximately 70°C for 30 minutes.

22. Transfer to labeled autosampler vials with volume reducing inserts. Cap vials.

K. **GC/MS Analysis**

Analyze the batch by GC/MS using the SIM program.

L. **Method Parameters**

Load the following method for this analysis:

1. method: BLBENQSM.M

### M. Batch Analysis

The order of analysis:
1. blank blood
2. cutoff calibrator
3. case samples
4. positive control

Solvent wash and blanks: ethyl acetate, reagent grade

### N. Data Interpretation

In order for the results to be reported, the following quality control criteria should be met:
1. ion ratios within specified range $\pm$ 20% (absolute)
2. retention times $\pm$ 3% of calibration standard retention times
3. sufficient peak shape and resolution
4. The response of the cutoff calibrator is used as the decision criteria
5. positive control has value greater than the cutoff
6. blank/negative control has a value less than the cutoff

### O. Comments

1. Whole blood is passed directly through the columns. Bleach will be added to the SPE waste container of the vacuum manifold. **Do not add bleach to the vac-elut manifold prior to eluting samples.**
2. To clean the fluid path of the flow control valves after completion of extraction, pass 2-3 ml bleach through each column followed by at least 2 washes of 2-3 ml DI water. Alternatively, the flow control valves can be disassembled and sonicated in dilute bleach solution followed by sonication in DI water.

END OF DOCUMENT
I. The toxicology traceability database is an Access database used to prepare logs and reports of supplies, consumables and equipment that may effect the test results, such as chemicals, as wells as supplies, equipment and services that are critical to the quality of tests, such as reference materials, equipment that requires calibration.

A. General Information

1. The database is split into a front end and a back end. The back end resides on a network server and contains the data. The front end resides on an individual’s computer and contains forms and reports for use. Multiple interfaces of the front end may exist to meet the needs of the various users.

   a. The front end is provided to users by placing a copy on the network server. For use of the database, the user should copy the front end to their computer from the ‘front end database’ folder on the network share. The user should neither use the copy on the server nor create a shortcut to the copy on the server.

   b. Changes can be made to forms or reports in the individual front ends without affecting other users. This allows the user to address issues with printer margins and labels.

2. The forms and reports are designed to provide the information required by the SOP. The appearance and location of forms and reports within the database as well as those produced by the database may change from the description here as long as it supplies the required information.

3. The Access database does not provide electronic audit trails of the information entered, therefore log records are printed from the database and maintained by the section. Changes made after the record is created must be made on the saved copy. The database should also be updated.

4. The database has been designed to include warnings to the analyst about expired and archived equipment and consumables. However it is the responsibility of the analyst to ensure the equipment and consumables they are using are appropriate for analysis, they should not rely solely on the database.

B. Main Database

1. Inventory: The primary consumables must be entered in order to be tracked in extractions or preparation of laboratory generated solutions. These include:

   a. Chemicals

   b. Reference materials or ampules

   c. Matrix blanks

   d. SPE columns

2. The primary inventory menu opens directly with the Inventory front end or from the “Physical Inventory” button on the main menu of the Main front end

3. For each of the four categories above, there is a Find and an Add button.

   a. The Add button opens a blank form for data entry. The find button opens a form listing all entries in the database. The form includes some filter fields to narrow down the records. Basic Access filters and sorts can also be used

4. Adding Consumables to the database

   a. In each of the categories, the lot # is the primary key. This means the database will not allow the user to enter multiple records with the same lot.

      i. If the “duplicate record” error is received, check the existing record to ensure the information previously entered is the same. Make sure the “archive” box is not checked

   b. Chemicals: Enter the chemical name, manufacturer, manufacturer lot #, grade and expiration date
i. The grade of the chemical may be found on the label (i.e. reagent, HPLC, 99%)

ii. Many chemicals do not have expiration dates. If no expiration date is listed, leave blank

iii. Print Labels: 1/2 x 1-3/4 labels (avery 5167), label includes lot # and barcode
   1. These labels can be placed on the bottles to mark receipt by the lab, or be used to label secondary containers
   2. Enter the number of labels to skip. Note, this is the total number of labels to skip, not the number of rows. Then enter the number of copies needed. At the prompt for date, enter the date received.
   3. Initial the sticker and place on bottles.

c. SPE columns
   i. enter lot and manufacturer info, include expiration date if provided by manufacturer and include the type of column

d. Blank Matrix
   i. This includes blood and urine obtained from lab staff or from an outside vendor
   ii. Enter the type of matrix, lot #, source and expiration date
      1. If an outside vendor provides a lot number, that should be used
      2. Matrix from lab staff can be named based on the date obtained and the initials of the individual providing the sample
      3. Matrix from an outside vendor may have an expiration date, matrix from lab staff do not
   iii. There is a box to indicate that the matrix has been verified or screened for drugs.
      1. Matrix from lab staff or certified by vendor does not require verification
      2. Blood obtained from a blood blank usually requires screening before use
   iv. There is a comment box that can be used to list anything important about the matrix. This may include any drugs detected during the verification process or if preservative was added.
   v. Print Labels: 3/4 x 2-1/4 labels (avery 6870), label includes lot # and barcode as well as any comments entered and a bio-hazard warning
      1. Enter the number of labels to skip. Note, this is the total number of labels to skip, not the number of rows. Then enter the number of copies needed. At the prompt for date, enter the date received.
      2. The label may be initialed and dated if required.

e. Ampules or Reference Materials
   i. Most of the reference materials used in the toxicology unit are ampules of drug in a solvent and are received with a certificate of analysis (COA)
   ii. Enter the source, typically the manufacturer, and lot number
      1. If a lot number is entered that is already in the database, a dialog box will open. Clicking yes will delete the duplicate record created.
   iii. Enter the name of the analyte. This does not have to be the exact name listed by the manufacturer but should include isomer information, such as (+/-), (+), d-, R-, if important, for example: amphetamine, methamphetamine or carboxy-THC which may used for screening
      1. The name used should be linked to manufacturer catalog numbers. See ordering.
   iv. The concentration field is for the nominal concentration and solvent.
   v. Enter the expiration date or retest date if provided. Retest dates may be updated by the manufacturer and should be changed in the database as necessary.
   vi. The COA info box is for information taken directly from the COA.
      1. The “Link” field allows the user to link this record to a saved copy of the Certificate of Analysis. Right click on the field, select the hyperlink menu, and then select “Edit Hyperlink”. A navigation window will open – navigate to the desired file and click OK.
link can also be created by dragging the icon of the file to be linked from the Explorer window to the hyperlink field. Once saved, clicking on this field will open the file. COAs provided as print copies can be scanned to an electronic format for linking.

2. Enter the certified concentration and uncertainty with units, if available. This applies primarily to ampules from Cerilliant.

3. Enter the certified concentration. This can be entered without trailing zeros (i.e. 1.000 will appear as 1).

4. If the certified concentration or the uncertainty is different than expected, the user will receive a warning. If the uncertainty is different the user will also receive a report which indicates the expected uncertainty and the new lot uncertainty.

vii. Enter the number of ampules received as a transaction
   1. The date field is automatically filled in
   2. If additional ampules are received of a previously entered lot, add another “received transaction”

viii. If a powder is going to be used, enter the information as for an ampule, but type in “powder” for the concentration. No transactions should be entered.

f. A report of consumables entered can be generated by entering the desired date in the field and clicking on the “Report” button. This allows the user or another analyst to review the entries for completeness.

5. Ordering reports
   a. The Orders menu is accessible from the main menu from either the inventory database or the main database and is used only for ampules
   b. Manufacturer Information
      i. The manufacturer catalog number and related information can be entered on this form. The minimum number is used to calculate the number of ampules to be ordered.
      ii. Ampules of analytes that are not normally kept in stock can be added here without a minimum number.
      iii. To create an order beyond the minimum, use the order button and add an “order” transaction for the number of ampules desired
         1. This transaction must be deleted once the ampules are received or it will continue to show up in the next months order.
      iv. In the footer of the form are synonyms for the analyte name. If a name is used for the ampule entry, it must be linked to the name entered for the manufacturer information.
   c. Current Inventory
      i. This prints a report of all ampules that have not been marked as archived and the number of ampules calculated to be present.
      ii. It will list the total number present as well as the number for each individual lot
   d. Ordering Report
      i. This prints a report of ampules with the catalog numbers that need to be ordered
      ii. The report lists the number currently in stock based on the entries in the database, the minimum number in stock and any additional orders requested
      iii. The report can be exported to a text file in G:\LAB\MUIR\Lab Aide\Lists\ folder by using the “Export Order” button. The text file can be imported into an excel spreadsheet.
   e. For the ordering report to work, it is important the ampules are tracked accurately. Ampules used in the making of standards are logged in stock or matrix forms. Ampules that are not used directly (i.e discarded due to expiration) must be logged in the database. This is done by adding a used transaction. It is recommended to do this from the record of the lot number of the ampule.

6. Equipment
   a. Pipettes and volumetric flasks are tracked within the database for calibrations and use in solutions and extractions
b. Pipettes and volumetric flasks cannot be added from the forms, nor can the names/serial numbers be edited. This must be done from the tables (pipettes or t_volumetric) by a knowledgeable user.

c. The Flask or Pipette form will display the records for all equipment in the database. The top of the form allows for filtering by status or calibration due date

i. The status (active/ archived) and comment field can be edited
   1. To appear in drop-down menus in forms, the equipment must be marked as active
   2. Inactive equipment means the pipette/flask is still within the lab may not be sent for regular calibrations
   3. Equipment should be marked as archived if it has been discarded or broken and cannot be used under any circumstances
   4. The comment box can be used to enter any needed information such the date the equipment was removed from service.

ii. The calibration subform will show the last calibration entered
   1. All active pipettes should have a record listing the last calibration and the next calibration due.
   2. Inactive pipettes should have a record with the last calibration, but not a calibration due date.

iii. When a calibration is performed, the information should be entered here.
   1. Select the correct record.
   2. For the calibration record showing, check the “recalibration complete” button.
   3. In the subform enter a new record with the information from the new certificate. The date of the last calibration will be printed on the certificate or the calibration sticker. Enter the date the next calibration should be done by.
   4. If this is the last calibration performed before a pipette is moved to inactive status or archived, do not enter a due date
   5. There is also a field that can link to the calibration certificate if it has been converted/received in electronic format

iv. The “view history” button at the bottom of the form will print a report listing all past calibrations

d. There are additional reports to keep track of equipment

i. Calibrations Due
   1. Enter the month as a number, and the four-digit year to get a report for all equipment that has a calibration due in that month

ii. Current List
   1. Lists the equipment in the lab not marked as archived and whether it is active, the last calibration date and the next calibration due (for active equipment)

iii. History
   1. Lists all equipment in the lab, including archived, and each calibration history

iv. Tracking
   1. Opens a form where the user can select the equipment ID, enter a date range, and print a report detailing its use
   2. Extraction report – lists the equipment used by extraction. Includes equipment used directly in extraction but only includes standards that have been used in an extraction. An additional report opens that lists the cases associated with each extraction
   3. Standard report – lists the standards, stock or matrix, that the selected equipment was used to prepare and any extractions that the standard was used in. Includes standards that have not yet been used in an extraction

7. Solutions Solution Inventory
   a. Laboratory generated solutions include reagents, stock standards and matrix standards
b. For each of the four categories above, there is a Find and an Add button.
   i. The Add button opens a blank form for data entry
   ii. The Find button opens a form listing all entries in the database. The form includes some filter fields to narrow down the records. Basic Access filters and sorts can also be used

c. Reagents
   i. The assigned lot # must be unique, it is typically based on the date prepared
   ii. Enter reagent name and fill in the date, initials, and volume prepared.
   iii. Enter the lot # of the chemicals used in the subform. If the lot is already in the database, the chemical information should automatically fill in when exiting the field.
   iv. If another reagent was used in the preparation of this reagent, enter the CCC reagent lot # in the labeled subform.
   v. An expiration date is only required if one of the chemicals used had an expiration date
   vi. To add verification information, click the “Add Verification” button and enter information in the form. Enter initials, date and method of verification.
   vii. To print labels, click the “Print Label” Button - Use Avery labels 6870 (3/4 x 2-1/4 inches). A Form will open with the current reagent lot number displayed. Click on Reagent Labels button and enter the number of labels to skip. This is the total number of labels, not the number of rows and the number of copies desired. The label will print with name, lot #, initials, date, and a barcode. Place labels on the primary container and any secondary containers.
   viii. The “Print Record” button will allow printing of the official copy of the record. Ensure that all the information on the record is complete and correct, initial and date, then file in the appropriate location.

d. Stock Solutions
   i. There are two forms for adding solutions – stock and stock IS
      1. The forms have different default values and drop-down menus. The IS form does not have a subform for flasks
      2. The main stock form can be used to make any stock solution
   ii. The assigned lot # must be unique and is typically based on the type of solution and the date prepared (i.e. S042313-1), the following conventions may be used:
      1. I – internal standard
      2. Q – stock QC standard
      3. S – stock standard
   iii. The box on the right side will list the lot numbers of recent stock solutions. Solutions can be iterated (-1, -2) as needed to ensure each solution has a unique identifier.
   iv. The analyte(s) can list the full name or use abbreviations. The name should be relatively short to fit on a label. The individual components will be listed from the standards used.
   v. The concentration and volume should be entered with the units (i.e. enter 100 mcg/ml; 5 ml).
   vi. The solvent lot # and the ampule lot # should be in the inventory. If the lot has not been entered, a message box will appear.
      1. If the ampule has been linked to a saved COA, click on the link to view it.
      2. If the certified concentration is different from the nominal, a warning will display. Check the COA for the actual concentration to be used to prepare standards
      3. Enter the number of ampules used. The default number is 1. If a previously opened ampule is used, set the number to 0. The database will calculate the number of ampules left for that analyte. If that was the last ampule, a warning should display.
      4. The button on the right of the subform will print labels for the ampule lot. Use this if the remaining contents of the ampule are going to be stored. At the date prompt, enter the date opened.
vii. Enter pipette and flask information. All stock solutions should list the pipettes used. Only quantitative standards, from Cerilliant, are required to have a volumetric flask. QC and IS solutions do not require a calibrated flask.

viii. The expiration date should be entered based on procedures or the earliest expiration date of the components. If there is no expiration date, leave blank.

ix. The “Print Labels” button will open the Label Form with the current lot # entered. Stock labels can be printed in 3 sizes:
1. Small – 1/2 x 1-3/4 (Avery 5167)
2. Medium – 2/3 x 1-3/4 (Avery 5155)
3. Large – 3/4 x 2-3/4 (Avery 6870)
4. Large with Title – provides option to enter a short name that will print on one side of the label
5. Place labels on containers. Labels include lot #, identity and concentration, initials, date, expiration date, barcode, the name of the solvent and a flammable sign.
6. The “Print Record” button will allow printing of the official copy of the record. Ensure that all the information on the record is complete and correct, initial and date, then file in the appropriate location

e. Matrix Standards
i. The assigned lot # should be unique and typically based on the date prepared. Blood standards usually start with B, urine with U (i.e. B042313-1). The box to the right of the lot field will list the lot numbers of recent standards.

ii. The blank lot # and stock lot # must be in the inventory or an error will display. Check the lot # and try using the pick list to find the right number. If the lot is not in the database use esc or delete record to delete entry and enter the required consumables/solutions. The lot numbers for all components must be entered into the database in order to link the records.

iii. Enter the lot # for all stock standards used in the stock standards subform.

iv. Enter the ampule lot # in the ampule standard subform if the standard is being made directly from an ampule.
1. If a COA has been linked to an ampule, an address will be present in the COA field – click to view.
2. Enter the number of ampules used. The default number is 1. If a previously opened ampule is used, enter 0. The database will calculate the number of ampules left for that analyte. If that was the last ampule, there should be a warning.
3. The button on the right of the subform will print labels for the ampule lot. Use this if the remaining contents of the ampule are going to be stored. At the date prompt, enter the date opened.

v. Enter all pipettes used to make the working standard. For quantitative standards, the volumetric flask used needs to be entered. Flasks are not required for QCs or qualitative standards.

vi. The expiration date should be entered based on procedures or the earliest expiration date of the components. If there is no expiration date, leave blank.

vii. A record in the Levels subform must be made for each level made, and the concentrations listed for each analyte in the standard.
1. Levels can be named as desired (such as LOQ, LOW, MED, HIGH)
2. The description for the level will appear on labels and on GCMS worksheets, so this is good place to indicate general information about the concentration – i.e. “0.02/0.05 mcg/ml”. The exact concentration for each analyte is indicated separately. On labels it will appear in front of the analytes chosen from the pick list at the top of the form, on GCMS worksheets it will appear next to the level – so it should not be too long.
3. The button “add defaults” will add preassigned levels for the standard. The default values must already be entered and must match exactly the analytes and type on the current form. Once added, the level can be edited (i.e. concentration, analytes, name of level) and additional levels can be added. Levels cannot be easily deleted, so do not use this button if making
fewer levels than are in the defaults. To see or edit defaults, see the button on the Solutions Menu.

4. Each level must also have the pipette(s) used to make it. Quantitative standards also require the volumetric flask to be entered.

viii. The “print labels” button will open the print label form with the current lot # filled in. The matrix std labels print on 2/3 x 1-3/4 labels. They include the lot #, description and analytes, exp date, matrix, type, initials and date and a bio-hazard label.

ix. Enter the number of copies desired– it will print that number for each level.

x. The “Print Record” button allows printing the official copy of the record. Ensure that all the information on the record is complete and correct, initial and date, then file in the appropriate location.

g. Verify

i. Laboratory generated solutions must be verified.

ii. Solutions such as buffers may be verified by independent methods such as a pH meter.

iii. Most solutions are verified by using successfully in an extraction. Independent verification prior to use in casework is not required.

iv. Verification must be recorded on the official record

1. The purpose of marking in the database is to keep track of solutions that need to be verified.

2. If a solution is not successfully verified, but will not be used or discarded, the verified box should be checked in the database so that it will not appear in forms/reports. A comment can be added to the method field.

v. The Verify button opens a form that lists all solutions that have not been marked as verified and if the solution has been used in a standard or extraction

vi. Individual forms also contain a button to add verification

vii. See extractions for how to check whether a solution used needs to be marked as verified.

8. Archive – Consumables and Solutions

a. Archiving consumables and solutions is important to minimize the size of drop-down lists and prevent inadvertent use of old lots

b. The Archive button is accessible from the Inventory or Solution menu

i. The form contains tabs for each of the different consumables/solutions

ii. It lists all unarchived solutions. Only the archive box can be edited here.

c. Archiving should be done once a lot has been consumed, discarded or expired

d. If additional supplies of a consumable that has been archived is received, the archive box should be unchecked

9. Extractions

a. The traceability form allows data entry of all the lot/serial numbers used in an extraction

i. The Extraction number must be unique. It typically starts with an E and is based on the date analysis begins (i.e. E042313-1). A list of the most recent extractions will appear to the right. Extraction numbers can be iterated (-1, -2) as needed to ensure each extraction has a unique identifier.

ii. Lot numbers for consumables and solutions must already be in the database.
iii. There are tabs for each of the different categories. Enter only the lot number, the other fields will fill in automatically from the database. Barcodes can be scanned where available.

iv. “Print Form” will print the traceability form that will be filed with the batch records.

b. Results Form

i. Enter any additional information needed that was not entered on the traceability form (i.e. sample volume, inst #, method, units).

   1. The units field will determine how quantitative reports print numbers “mcg/ml” uses 3 digits, “ng/ml” uses 2 digits.

ii. If the extraction was successful, press the “Check Verification” button – this will open a form that lists all the standards/reagents used in the extraction that have not been marked as verified. They can now be marked as verified with the initials, date, and method of verification. There is also a reminder that can be printed to ensure the official records are marked as required. This must be printed prior to marking solutions as verified.

   1. If the standard is not going to be used again, it can be marked as archived.

iii. There are 2 tabs – one for standards and one for curve results.

iv. The Curve results must be entered manually. There must be a record for the matrix blank results and an additional record for the curve r-squared results (for quantitative analysis). For the blank, enter 0 (this will appear as (-) on worksheets). For the r-squared, enter the values listed by chemstation for each analyte.

v. Before standard results can be entered, the levels must be defined – this will assign the levels from the matrix standards to the levels for the extraction.

   1. The levels should be named as they will appear on the GCMS worksheet (i.e. LOQ, LOW, MED, HIGH). For QCs, be sure to include QC in the name and number them so that they will appear on the worksheet in the order in which they were run (i.e. QC 1, QC 2 etc). Each extraction level should have a different name, **it does not need to match the matrix level name**.

   2. To enter individually: Enter the level name for the extraction, then chose from the pick list the matrix lot #, limited to the lot number listed on traceability form, and then choose the matrix level, limited to the levels listed when standard made. To check what the matrix level is – click the “check level” button, a form will open listing the analyte concentrations for the chosen lot # and level. Once the correct matrix level has been chosen click the “add level” button. The analyte and target concentrations will appear in the subform with blank fields to add results.

   3. The “Add Multiple Levels” button opens a form to add all of the extraction levels, and correlate them to the matrix levels. Once completed, click the “Add all Levels” button to add levels and return to original form. Enter a blank record before doing so, this ensures all records will be updated – if not, exit out of form and reopen. If the “Return to results” button is clicked, the fields will be added, but not reflected in the form.

vi. Results can be entered manually or imported.

   1. To enter manually, simply type in the results for each standard.

   2. To import, the data must be in a matching format and the levels and analyte names must match. See Formatting for Import into database section under **Result Formatting** on how to get the data from chemstation. Click the “import results” button. Once imported, check that all data is present and correct.

vii. Case results must be imported from an excel workbook - See Formatting for Import into database section under **Results Formatting**. Click the “import cases” button. After importing, a screen will show up with the results for viewing – The information cannot be edited here. Close the window.

viii. To edit results or add comments to any cases, click the “edit case results” button. A form will open to show each individual case.

   1. The case number, the results, or comment field can be edited. Further explanations can be made in the comment box. These comments will appear just below the case number on the worksheet. For example, indicate the volume used if different from the extraction procedure (i.e. dilutions)
ix. **Results Formatting** - The following numbers can be used to have characters or comments automatically appear in the GCMS worksheet.

1. For standards and cases:
   1. 0 will appear as (-) on worksheets
   2. 111 will appear as (+) on worksheets
   3. -999 will appear as “--” on worksheets and have the comment “-- = not evaluated”
   4. -X (any negative number not already assigned) will appear as “*”. There is no default comment, the analyst must add one to either the extraction comment or the case comment for explanation. Entering the result as a negative will prevent the number from being seen on reports but will allow the result to be tracked in the database.

2. For case results:
   1. -111 will appear as “int” and have the comment “int - inconclusive due to interference”
   2. -222 will appear is “qual” and have the comment “qual-qualifier out of range”
   3. -888 will appear as “**” and have the comment “**see other analysis”

x. **Qualitative extractions**

1. Negative results are entered as “0”, positive results as “111” for standards as well as case results. When the GCMS worksheet is printed, it will list the target concentrations of the standards, but the criteria should simply be “(+). This requires the correct method to have been chosen on the traceability form.

2. **AMP/METH urine** extraction
   1. The result of the RS is not reported in the body of the worksheet. Use the comment field to indicate that the RS was acceptable (eg “resolution solution acceptable” or “RS-OK”).
   Any incidental findings for a case can be reported in the comment field for that case (e.g. “screen (+) methadone”).

3. **A/N/B screening extractions**
   1. The SPE mix must be made as a matrix standard. Do not add individual analytes for each component. Add one level called “SPE mix” with two analytes: “A/N” and “basic” for the two separate elutions. Enter 2 mcg/ml for the target concentration. This is the concentration of each analyte in the SPE mix. The analytes for the extraction are “A/N/B”
   2. After the extraction, enter results for the SPE mix and the matrix blank. If all analytes are detected in the appropriate fractions, the SPE mix can be called “(+)” (enter “111”). When the worksheet is printed, the criteria listed will be (-) for the blank and (+) for each fraction of the SPE mix
   3. If nothing is detected in a fraction for the case, enter “0” for negative. If a compound of interest was detected enter “111” for the (+) result and list the drugs detected in the comment field for the case

xi. The “Problem Log” button will open a form to fill out additional information on problem runs.

1. **All failed runs must have a log entry. It is important to use this button to create logs for extractions in order to ensure the record is linked to the extraction.**

2. The log allows for additional information to be added but will not appear on GCMS worksheets. This may include information such as running on a different instrument or changes in instrument parameters. If the run was completely unrecoverable, check the “Failed” box. This may be used to track any other “non-conformities. See SOP – Test Quality and Corrections for the types of issues that require a log entry.

xii. **Print Worksheet** – prints GCMS worksheet with just standard information (is filed with the batch records)

1. Any standards of type “MA” will appear after the standard criteria. The concentration and the result will print without any “acceptable range” information

2. Use the Landscape button for extractions with more than 7 analytes
xiii. Case Results – prints GCMS worksheets with case results. Results for any standard of type “MA” will not appear on this worksheet. These worksheets are include in the case notes

1. A dialog box will appear to prompt if a batch file is desired. Selecting yes will create a text file in the temp folder – see Batch Imaging for more information.

2. Use the Landscape button if there are more than 7 analytes

xiv. Chemstation Automation

1. The use of a macro in chemstation helps automate the printing of quantitation reports and creation of the text file for importing into the database. The following conditions must be set:

   1. The quant method is loaded in data analysis.
   2. The method has been updated, including responses and qualifiers, and saved.
   3. The printers in data analysis are set to “batch record” printers (default and runmethod)
   4. Data files were collected with the following conventions:
      1. File names: x…x##.d
      2. Samples collected in every other data file
      3. All data files are in the same folder
      4. All data files have the same prefix before the iterating number

2. Do the following:

   1. In the data analysis CCC Reports menu, select Export Quant
   2. A dialog box should open asking for the starting folder
   3. Select the starting folder (the first file in the sequence to be printed out, ie the matrix blank or xxxxxx02.d)
      Select the ending folder (the last datafile in the sequence to be printed out, ie. the last QC xxxxxx44.d)
   4. A dialog box will then open for hard copies- enter the numbers of the files to be printed out (ie for file xxxxxxx10.d enter 10) – up to 12 files may be printed
      1. The first dialog box has numbers filled out assuming the blank started at file 02
      2. If more than 6 files will be printed, select the more button and enter any additional numbers, such as the last QC.
   5. The dialog box for the calibration curve will open. Select the curves to be printed. Using the cancel button will not cancel the macro, it only cancels the printing of the curves.

3. What is produced:

   1. Every other file from the selected start to end will be processed
   2. The calibration curves and selected files will print to the selected printer
   3. All other files will print through JusticeTrax Imaging
      1. A text file called imagebatch.txt is created in the temp folder
      2. These should be ready for imaging into LIMS. Images can be processed individually or by batch – see Imaging.
   4. A file called “results.txt” will be created in the temp folder and contains the results of all the files processed

4. Formatting for Import into database

   1. Transfer the results file from the instrument computer. Data can also be typed into the individual excel worksheets.
   2. Open the excel file “import-db” (macros must be enabled). A copy is available in the database folder. The file should be copied to the individual’s computer.
3. On the first tab “data” select the cell just below “lab no”.

4. Right click and select refresh data. Navigate to the results text file transferred from the instrument computer. The results will be imported into cells. It should skip the analyte name; if it does not, delete the column. If any data from a previous import remains, delete it to avoid confusion.

5. Select the standard results. Use control-click to select QC results separated from the other data, and Copy.

6. Move to the “std” tab and paste just below “level”. Again, if extra data remains from previous imports, delete it.

7. Rename any levels to match exactly as they are in the traceability database.

8. Add the analyte names at the top, again it must match exactly the names in the database.

9. Be sure a cell inside the result grid is selected and click on the “Reorganize Data” button. The data will be created in the necessary format on the “std-import” worksheet.

10. Return to the data worksheet and select the case results. Use control-click if needed to select only case results.

11. Copy to the “case” worksheet, just below “lab no”, delete any old data. Each name should be different. If there are multiple dilutions, this should be reflected in the name but the name should be short enough to fit on worksheet.

12. Correctly label the analytes as was done for the standards. Results can be changed here (ie any result to be reported as negative should be changed to 0), or from the database after being imported.

13. Make sure a cell within the results is selected and click on the “Reorganize Data” button. The data will be created in the necessary format on the “case-import” worksheet.

14. Save the excel file and exit – data is ready to be imported using the buttons on the results form.

10. Quality Log
   a. The database is used to log quality issues per SOP – Test Quality and Corrections
   b. The main categories for issues include confirmation or extractions, screening and general
   c. Log entries related to a specific extraction should be made from the results page of that extraction
   d. There is a “Quality Log” button on the main menu for the Inventory front end and the main front end
      i. This opens a form containing all the Log records – they can be searched and viewed/edited
      ii. There is a button at the bottom of the form to create a new Log entry
         1. Enter analyst, date and category
         2. There are memo fields to enter explanations of the problem and any actions taken
   e. Reports of the quality log are accessed from the Report menu in the Main database
      i. Reports can be printed for each of the individual categories, for example: Extraction, Screening, General or all together-Quality Log.
      ii. The Quality Log can printed for a selected date range for review and filed in the toxicology unit.

11. Uncertainty
   a. The uncertainties for certified reference materials used in budgets have been entered into the database
      i. This is entered directly into a table by a knowledgeable user
   b. Uncertainties for each individual lot is entered when it is first received. If the uncertainty is different from what has been entered into the database, a report can be printed and provided to appropriate personnel
   c. There are reports available from the Report Menu listing all of the ampules with their uncertainties or compared to the budget uncertainties
12. Reports
   a. Listed here are only examples of some of the reports that may be available from the database
   b. There is a Report menu in the main database, however some reports may be accessed from other menus
   c. Expired solutions/consumables
      i. Reports are available that list solutions/consumables which have expired or will expire within the month
   d. Lists
      i. Reports are available listing all of the entries for various categories such as solutions, reagents, extractions
   e. Chemical Tracking
      i. The reports lists all of the extractions, reagents and solutions where a specific lot of chemical was used
   f. QC reports
      i. Periodic Measurement Assurance analysis is performed on data from the access database, but this accessed through the Excel file. See Quality Test and Corrections.
      ii. Export– exports all QC results after the entered date to an excel file called “New QC Data” in the “Tox Section Archived Run” file
      iii. Reports – various reports that show QC results from extractions
         1. Select the analyte and then choose “List Report” or “Matrix Sorted”.
         2. The “List report” lists all QC results for the analyte grouped by target and listed in date order. It also provides the matrix and stock lots for QC and standards.
         3. The “Matrix Report” groups the QC results by Matrix lot, and lists in date order. It also lists curve information.
         4. The “Lot Report” shows the results for the matrix lot selected. It groups results by analyte and target. The report also lists curve information
   g. Extraction Stats – reports for the number of cases and extractions. Enter the date range desired for a complete report. Reports can be printed for everyone or for a single analyst
      i. Extraction Report – prints list of extractions performed in the date range
      ii. Calendar Report – prints extractions performed in the date range in monthly calendar format
      iii. Method Stats – prints report with the frequency of each extraction by year
      iv. Type/Analyst – prints report that lists the different extractions performed and the number of analysts by year
   h. Reagent Stats – lists each reagent and the number of extractions performed per lot and the number of cases

13. Batch Records
   a. Batch records stored electronically can be linked to the related record in the database
   b. The “Review” button opens a form that displays all extraction records which have not been marked as reviewed
      i. Click on the link to open the saved file
      ii. Check the “Reviewed” box to mark that the extraction has been checked
   c. “By Case” opens a form to find all extraction records related to a case number
      i. Enter the case number at the field at the top, the related records will appear below
      ii. The case number must be exactly as it appears on the GCMS worksheet
   d. “All Records” opens a form that lists all extractions

C. Screening Database
   1. The primary consumables must be entered in order to be tracked. Labels can be printed for the different consumables. These include:
a. Plate kits
   i. Kits are provided by the manufacturer
   ii. The Kit lot number is entered as well as the individual plate lot number and conjugate lot number
   iii. Kits typically include reagents as well as plates and conjugate, but only the plate and conjugate are considered a set for laboratory use. Reagents such as substrate and stop may be used interchangeably.
   iv. The type of kit is entered based on what is provided by the manufacturer. The kit type may be the manufacturer (Immunalysis), or based on the type sent by the manufacturer, for example: oral fluid or serum for Orasure kits.
   v. The kit calibrator type is often the same as the kit type, but it can be different. Not all kits may require the use of a kit calibrator. The type entered is the type that will be used in the assay on the Dynex.
   vi. The substrate type is based on the manufacturer of the kit (Immunalysis or Orasure)
   vii. The kit expiration date provided by the manufacturer is based on all of the components sent in the kit. Because not all components are used by the laboratory, only the plate expiration date and conjugate expiration date are entered here.
   viii. Labels are size Avery 6870
b. Kit Calibrators (from manufacturer)
   i. The name is the standard type, for example: negative calibrator or cutoff calibrator.
   ii. The type is the manufacturer (Immunalysis) or the fluid type (oral fluid or serum for Orasure)
   iii. Expiration date and lot number from manufacturer
   iv. Labels are size Avery 8167
c. Reagents-These are purchased reagents, not made in-house
   i. The name is the type of reagent
      1. Substrate should be differentiated based on manufacturer
   ii. Expiration date and lot number from manufacturer
   iii. Labels are size Avery 8167
d. Matrix blanks and Matrix standards have been linked to the main database
   i. Matrix standards must be entered from the main database
   ii. Matrix blanks can be entered here or the main database
      1. Because the databases are linked, adding from either database will include it in both. Also, archiving from one database will archive it in both
      2. Labels are size Avery 6870

2. Sessions
   a. Each group of assays performed by an analyst on a single date is considered a session
   b. Each session has a unique ID generated by the database
   c. The analyst enters the necessary information: date, analyst, dilutor, standards and consumables. There are separate tabs for:
      i. Plates (kits – plate/conjugate combinations)
      ii. Reagents
         1. Reagents are not linked to the plate they are used on.
         2. The substrate used for the assay is entered with the plate kit information as the “substrate type” (Immunalysis or Orasure)
         3. The same stop is generally used on all plates.
         4. Additional reagents will depend on the assay.
iii. Kit calibrators
   1. The kit calibrators are not linked directly to the plate they are used on, that is determined by the type
   2. The type of kit calibrator used for the assay is entered with the plate kit information as the “kit cal type” (serum, oral fluid, Immunalysis).

iv. Blank matrix
v. Standards-Identified by lot number and individual level
vi. Dynex Plates
   1. Results are imported into the database by clicking the “Import Data” button and selecting the text file. This must be done for each plate run.
   2. The plate name and read date comes from the text file that was automatically generated by the instrument and then imported.
   3. If the failed box is checked, the data will not show up on the case reports

 d. There is a field to hyperlink saved electronic copies of the selftest from the instrument as well as the batch records

 e. There is comment field to enter any explanations for failed plates. If multiple lots of a consumable are used, describe which lots are related to which plates.

3. Reports
   a. Case reports are included in the case notes in LIMS
      i. Case reports may be selected by case number, plate name, date and/or operator
      ii. Each case report has the assay name, text file name, optical densities of the sample and the optical density of the cutoff
   b. Additional reports may be available summarizing plate use or frequency of analysis

4. Quality Log
   a. The button links to the quality log of the main database

5. Review
   a. Batch records stored electronically can be linked to the related record in the database
   b. The “Review” button opens a form that displays all extraction records which have not been marked as reviewed
      i. Click on the link to open the saved file
      ii. Check the “Reviewed” box to mark that the extraction has been checked
   c. “By Case” opens a form to find all extraction records related to a case number
      i. Enter the case number at the field at the top, the related records will appear below
      ii. The case number must be exactly as it appears on the screening report
   d. “All Records” opens a form that lists all sessions

END OF DOCUMENT
I. The following is the procedure for using the Handheld Barcode Scanner (Motorola/Zebra MC 2180 or equivalent).

A. Procedure for Using the Scanner

1. Turn on barcode scanner. If it is in sleep mode, press any key to wake up. If it has been turned off, press the small power button at the bottom of the scanner.

2. Start the SSE Comparator software if it is not already open. There is a shortcut on the desktop.

3. Make sure the “Erase after compare” button is checked.

4. Scan the first barcode, this fills in the box for Bar Code.
   a. Aim the scanner at the barcode and press the yellow button just beneath the display. The scanner does not have to be in the same orientation as the barcode (it can read the barcode vertically or horizontally).

5. Scan the second barcode, this fills in the box for Bar Code B.
   a. If the two barcodes match, the boxes on the display will be green, there will be an audible “good” beep.
   b. If the two barcodes do not match, the boxes on the display will be red and there will be an audible “bad” beep.

6. The scanner is automatically ready for the next set of barcodes. The boxes do not need to be cleared. The next scan will automatically populate Bar Code A.

7. Each comparison is automatically logged on the scanner.

8. The barcode for the sample must be the same for it to match. This means if the analyst created dynex labels with an additional name (e.g. benzo), the scanner will flag it as not matching. Also if the sample is subitemized, and the barcode is for parent/child or different subitem, it will be flagged as not matching.

B. Retrieving Log File

1. The computer must have Microsoft ActiveSync software installed.

2. Place the scanner in the charging cradle and attach the USB cable to the cradle and the computer.

3. The scanner should automatically be detected and ActiveSync will start up.

4. At start, a dialog box will ask about setting up a relationship – select “No”.

5. ActiveSync will open up – it should say connected.

6. Follow the path Windows CE\My Documents
   a. Click on the Windows CE icon in explorer
   b. Open the "\" folder
   c. Open the “My Documents” folder:
      i. The log file is the “ScanHistory.csv” file
      ii. Copy to analyst's computer
   d. If analyst has completed the batch of samples, delete the “ScanHistory.csv” file from the scanner.

7. Open the copied file on a computer with excel.

8. Adjust any column widths as needed so all data is visible. Delete any old data not related to the current batch.

9. Add any comments as necessary.
10. Print to an appropriate format for archiving with the regular batch records.

C. Clearing Log File/Reset Counter
   1. The Log file should be cleared and the counter reset after batch data has been successfully downloaded or prior to starting a new batch (if older data is no longer needed).
   2. From the SSE comparator main screen, click the “Log” button.
   3. Enter the password at the prompt.
   4. Select the “Clear Counters” button to reset the pass/fail count to 0.
   5. Select the “Clear Upload File” to erase all past data.
   6. The Password is on the scanner. It may be changed if deemed necessary.

D. Exiting Software on device
   1. User may need to exit the SSE Comparator software to change settings on the device, such as sleep mode.
   2. SSE Comparator software may have security to prevent user from inadvertently altering settings on the scanner.
      a. The password to exit the software may be different from the Log password.
      b. The password is on the scanner. It may be changed if deemed necessary.

II. Instructions for printing labels
   A. 1D barcodes can be printed from a crystal report in LIMS.
   B. 2D barcodes are printed by the following process.
      1. The "2D barcode" folder must be copied to the analyst's computer before printing.
         a. It can be found on the G:Drive: 1-Tox\Tox Inst\mail merge documents\2D barcode.
      2. The analyst should create a worklist for desired labels.
         a. When the worklist is created, the "Create Sequence File" checkbox should be checked and the instrument selected should be "Tox labels." Click the "Save" button.
            i. A pop-up will open, save the text file as "import.txt" in a folder. For example, the "Temp" folder may be used.
            ii. Add QCs for the run and make any necessary changes. If any sub-items not being analyzed are included in the worklist, they should be removed from the text file. After all changes are complete, save the file.
      b. In the "2D barcode" folder, open the "sequence transform" excel file.
         i. At the top, select the "Data" tab and select "Refresh All," which will update the data in the table.
         ii. Verify that the information in the "final" column is correct. If any sub-items not being analyzed were not deleted from the text folder, the row for that item should be deleted from the excel sheet. After all changes are complete, save the file.
      c. In the "2D barcode" folder, open the "extraction vial labels barcode 2D" file.
         i. A prompt will open, select "Yes." Navigate to the "2D barcode" folder, and select the "sequence transform" excel file.
         ii. At the top, select the "Mailings" tab. Select "Finish and Merge," "Edit Individual Documents...," then in the pop-up, make sure "All" is selected and click "OK." A new window will open with the labels for the worklist.
         iii. Any labels without relevant data should be deleted. Labels can be moved around on the sheet or duplicated if more than one set of labels is needed. Once all changes have been made, print labels.
      d. Repeat the process for the "GC labels barcode 2D" file in the "2D barcode" folder.
   C. Labels are then placed on appropriate vials and the scanner is used according to this procedure.

END OF DOCUMENT
I. Policy: The training protocol for drug impairment will be used to train Criminalists in knowledge, skills and abilities prior to being authorized to testify on drug impairment cases.

A. Impairment Training - Introduction

1. Intent and Purpose of Training Program: The goals of the Toxicology Impairment Training Program are:
   a. To develop knowledge, skills, and abilities in the area of toxicology impairment culminating in the ability to perform toxicology impairment testimony.
   b. To understand and implement the policies and procedures in the Toxicology Technical Unit Manual and Division Manual in order to
      i. Review reports and testify to the analyses performed
      ii. Discuss the impairing nature of the drug(s)
      iii. Render an opinion regarding the effects of a drug at a different point in time, if applicable
   c. To gain expertise in courtroom testimony and drug impairment through training and experience

2. Educational Requirements:
   a. Analysts working in the toxicology sub-discipline shall possess a baccalaureate or an advanced degree in a natural science, criminalistics or a closely related field.

3. Expectations of the Trainee:
   a. Abide by the training module and any modifications, if applicable
   b. Maintain a Training Binder
   c. Maintain a Reading list
   d. Communicate any questions about training with the Supervisor or Trainer

4. Competency Test: The training program may be abbreviated for analysts with previous experience in toxicology impairment testimony
   a. It is at the discretion of the Supervisor or Manager to abbreviate the impairment training program based on previous experience. If the program is abbreviated, the following will be documented
      i. Previous experience
      ii. Pertinent training from this procedure that is omitted, abbreviated, and/or completed
   b. At minimum, the competency test will include:
      i. A written or oral examination to assess the individual's knowledge of drug impairment and human performance on the body
      ii. A mock court where the trainee will be given hypotheticals and the trainee must render an opinion regarding the human performance of a drug
   c. The trainee will work under the supervision of a Supervisor or designated trainer, however drug impairment is the consummation of toxicology training and best achieved by independent study

5. Timeline and Progress Expectations
   a. The training program for drug impairment should take approximately 6 months
i. Training for drug impairment need not be directly after completion of toxicology analysis training and may be completed at a later time

ii. Drug impairment training will commence upon a decision of the Manager or Supervisor

b. The training program is one module but can be assessed by the Supervisor or trainer regularly after the following categories:

i. Pharmacology

ii. Drug Recognition and Evaluation

iii. Stimulants - Amphetamine/Methamphetamine

iv. Stimulants - Cocaine

v. Opiates, Opioids, Narcotics

vi. Cannabinoids

vii. CNS Depressants

viii. Hallucinogens, Dissociative Anesthetics, Inhalants

ix. Hypothetical Scenarios

6. Effectiveness of Training

a. The following are training actions and can be used to evaluate the effectiveness of initial training:

i. Communication with the Supervisor throughout the training program, which may include

1. Oral feedback

2. Written feedback

3. Annual performance Evaluation

ii. Practical and written exercises as indicated in the documented training program

1. Written feedback by the Supervisor on question sets especially in regards to the depth of technical knowledge

iii. Mock court exercises

iv. Assessments at the end of each drug category

b. The following are training actions and can be used to evaluate the effectiveness of on-going training:

i. Court critiques

ii. Oral or written feedback provided to Supervisor upon completion of

1. Drug categories

2. Training classes

3. Webinars

4. Journal articles and other pertinent readings

iii. Yearly performance evaluation that includes setting goals for the analyst, review of SOQ, and training binder. This assessment reviews analyst goals for development and evaluates the effectiveness of training actions and if further training actions are needed

7. Maintenance of skills and re-training:

a. Demonstration that knowledge, skills, and abilities have been maintained is apparent in the ability to explain how drugs interact in the body and opinions of human performance from drugs

i. Due to the breadth of knowledge of drug effects, it is common that a brief review of drug information is necessary

b. If technical issues arise from courtroom testimony monitoring, the Manager or Supervisor may require re-training in any of the areas listed below. The re-training will be documented.

8. New Equipment and/or Methodologies
a. When the analysis of a new drug is introduced to the laboratory, the Manager or Supervisor will assess whether a written or oral examination on the effects of that drug is warranted

b. The need and extent of a competency or mock court will be evaluated by the Supervisor/Manager

9. **Scope of Training:**
   a. The field of Forensic Toxicology covers a wide range of topics, drugs, and other analytes. The Toxicology Unit of the Forensic Services Division is limited in scope of analysis resulting in a limited scope of drug impairment testimony.
      i. See **FSD.14** for more information regarding courtroom testimony
   b. The literature and references listed in this document are the Laboratory's best guidance to prepare a trainee for drug impairment testimony for the drugs tested in the Toxicology Unit
      i. The limitation should not restrict the analyst in having a general understanding of other drugs, especially those in the same drug category or of similar pharmacological nature
      ii. Not all references need to be reviewed, however the Supervisor will assess the trainee's reading list to ensure a comprehensive amount of literature is reviewed
         1. The trainee should review all Toxicology Literature Binders
         2. The trainee should have a thorough understanding of each drug tested in the unit in order to quickly reference and review a drug's pharmacological properties for court purposes
   c. Training may address any of the following issues as it relates to the effects of drugs and rendering an opinion on human performance from drug interactions:
      i. Knowledge
         1. Reviewing relevant literature
         2. Reviewing opinions accepted in the discipline
         3. Attending courses, webinars, meetings, and workshops, if possible
      ii. Procedures
         1. Proper court procedures according to Toxicology Unit, Forensic Services Division, and Sheriff's Department policies
      iii. Presentation of Evidence in Court
   d. General Knowledge of forensic science and ethical practices in forensic science will be covered in **TOX.60**

10. **Authorization for Drug Impairment Testimony:**
    a. The use of the authorization checklist in conjunction with the documented training program is will aid in the documentation of competence of all who testify on drug impairment.
       i. Upon completion of the Drug Impairment module, the Supervisor or Manager will sign the Impairment Testimony Authorization section, allowing the Criminalist to testify to the effects of drugs

11. **Training Records**
    a. The appropriate training records and assessments will be placed in the employee's Training Binder, maintained by the employee, and reviewed by the Manager/Supervisor upon completion of the training
    b. Additional training such as seminars, workshops, conferences, and classes will be documented in the employee's Statement of Qualifications and/or Training Binder
       i. Copies of certificates from meetings will be placed in the Training Binder and electronically uploaded into LIMS

12. **Further Information**
    a. Refer to the Division Manual for further information regarding training (**FSD.21**)

B. **Toxicology Drug Impairment Training - Literature Review**
   1. A reading list comprising of all literature reviewed during training will be maintained by the trainee and stored in the Training Binder
2. **Literature Collection:** The trainee will read extensively from the Toxicology literature collection. Subjects will include, but are not limited to, the following:
   a. Blood, urine, and other fluid and tissue specimens for drug analysis
   b. Immunoassay
   c. Antemortem and post-mortem samples
   d. Gas chromatography/mass spectrometry
   e. Sample preparation techniques
   f. Preservatives/anticoagulants
   g. Collection, storage, and stability of specimens for analysis
   h. Physiology and pharmacology of drugs
   i. Quality assurance
   j. Expert testimony

3. **Selected References:** The following are suggested readings and reference materials for the toxicology drug impairment testimony training:
   a. Toxicology Literature Binders (see Literature Collection)
   h. Disposition of Toxic Drugs and Chemicals in Man, Baselt, Cravey editors, Chemical Toxicology Institute, 1995.

II. **Module: The Toxicology Drug Impairment Training Module**

A. **Toxicology Drug Impairment Module**

1. **Objectives and Topics of Study:** The trainee will study the following regarding drug impairment:
   a. Pharmacology
   b. Drug Recognition and Evaluation
   c. Stimulants - Amphetamine/Methamphetamine
   d. Stimulants - Cocaine
   e. Opiates, Opioids, Narcotics
   f. Cannabinoids
   g. CNS Depressants
   h. Hallucinogens, Dissociative Anesthetics, Inhalants
   i. Hypothetical Scenarios

2. **References:** Below are references and resources available to assist the trainee. The Laboratory's collection is constantly updated and expanding
   a. Policies
      i. Literature References (TOX.06)
      ii. Court Testimony and Proficiency testing (TOX.15)
iii. Outside Laboratory Analysis and Discoveries (TOX.56)
iv. Courtroom Testimony Monitoring (FSD.26)
v. Case Record (FSD.42)
vi. Control of Records (FSD.44)
vii. Discovery Request for Records (FSD.45)
viii. Customer Service and Complaints (FSD.14)

b. Literature
i. Literature Binders (see Literature Collection)
ii. Journal of Analytical Toxicology (historical and on-going collection)
iii. Principles of Forensic Toxicology, 4th ed, Levine
iv. Karch's Pathology of Drug Abuse, Karch.
v. A Primer of Drug Action, Julien.
vi. Clarke's Analytical Forensic Toxicology, Jickells and Negrusz.
vii. Medical-Legal Aspects of Drugs, Marcelline Burns
viii. Disposition of Toxic Drugs and Chemicals in Man, 10th ed, Baselt
ix. Drug Effects on Psychomotor Performance, Baselt
x. Fundamentals of Forensic Science, 3rd ed, Houck and Siegel
xii. Chapter 1: Forensic Science Handbook, Volume III, Saferstein
xiii. Chapter 23: Garriott's Medicolegal Aspects of Alcohol, 6th ed, Caplan and Goldberger
   1. Chapter 19: Introduction to Forensic Toxicology, Crave and Baselt; reprint of original Kogan article with modifications

c. Required Courses:
   i. The Robert F. Borkenstein Course on the Effects of Drugs on Human Performance and Behavior
   ii. Drug Recognition Evaluator Program, California Highway Patrol
      1. Including attendance to certification sites

d. Additional Resources:
   i. The California Criminalistics Institute offers courses on courtroom testimony and pharmacology, subject to availability
   ii. Standard Field Sobriety Test - Class, California Highway Patrol
   iii. Drug Abuse Recognition - Class, Contra Costa County Office of the Sheriff
   v. California Health and Safety Handbook
   vii. California Association of Toxicologists meetings
   viii. Society of Forensic Toxicologists workshops and meetings

3. Practical Exercises:
   a. Exercises:
      i. The trainee should observe relevant testimony by Forensic Services Division Criminalists
         1. The trainee may also complete Internal Court Critiques
2. The trainee should attempt to observe testimony regarding drug impairment, if possible
   a. Alcohol impairment testimony and opinion may also be observed

ii. The trainee should review all pertinent literature, including literature listed in TOX.06
   a. A reading list will be maintained by the trainee

iii. Attend the required courses including DRE certification sites
   a. Observation notes will be collected and added to training binder.

b. Questions:
   i. Write a brief summary of each court decision and how it applied to Forensic Science and Forensic Toxicology (may use answers from TOX.60) (~1 Week)
      a. United States v. Frye
      b. Daubert v. Merrell-Dow
      c. Kumho Tire Co. v. Carmichael
      d. General Electric v. Joiner
      e. Melendez Diaz v. Massachusetts
      f. Brady v. Maryland
      g. Missouri v. McNeely
   ii. Pharmacology (Pharmacodynamics and Pharmacokinetics) (~3 weeks)
      a. What is pharmacodynamics? What is pharmacokinetics?
      b. What is efficacy?
      c. Describe five factors that affect absorption?
      d. What is an agonist, Antagonist?
      e. What are the potential mechanisms for tolerance?
      f. What are the potential mechanisms for drug interactions?
      g. What is hysteresis? Why does it occur? What are the two types?
      h. What is "volume of distribution"? What factors determine the volume of distribution for a given drug type.
      i. What factors must be considered in predicting drug usage from drug levels?
      j. Describe how postmortem actions can influence drug levels?
      k. Define zero and first order elimination.
      l. Define first pass effect.
      m. Define the term half-life? In general, how many half-lives will it take for a drug to be no longer detectable in the blood.
      n. Give 5 examples of different routes of administration and describe how each route of administration would affect onset of drug action and possibly peak blood concentration.
   iii. Field Sobriety Tests/Drug Recognition and Evaluations (~2 weeks)
      a. What are the DRE drug categories?
      b. List the steps in the DRE process and briefly explain each step in the process.
      c. What are the standardized field sobriety tests? List and describe the clues for each.
      d. What is the expected pupil size for an individual who is under the influence of a stimulant? A narcotic analgesic?
      e. What would be the expected vital signs for an individual who is under the influence of a depressant? Of Cannabinoids?
6. If not all of the steps for the DRE is followed, how does it or does it not change your opinion regarding drug influence or drug impairment?

iv. Effects of Drugs

1. Effects of Drugs

   1. Stimulants (amphetamines) (~2 weeks)
      1. What are the metabolites of methamphetamine and MDMA? Are they active/inactive?
      2. What are the common neurotransmitters that are affected by the usage of methamphetamine?
      3. What is the common structure of these neurotransmitters? How are they different or similar to methamphetamines?
      4. What is the mechanism of action for methamphetamine?
      5. Methamphetamine may be present in racemic mixtures, describe the different properties and effects associated with d- vs. l- methamphetamine.
      6. If a person is consuming methamphetamine only, what is the typical ratio that between the amphetamine and methamphetamine concentrations in blood can one expect
      7. What is the half-life, therapeutic level, detection time window in blood and urine for methamphetamine.
      8. What are the signs and symptoms you would expect to see from using amphetamine, methamphetamine, MDA, and MDMA?
      9. Discuss the effects of methamphetamine and MDMA on driving

   2. Stimulants (cocaine) (~2 weeks)
      1. What are the metabolites of cocaine? Are they active/inactive?
      2. Compare and contrast the effects of cocaine and methamphetamine on catecholamines.
      3. What is the mechanism of action of cocaine?
      4. Why do cocaine users typically smoke cocaine base and not smoke cocaine salt?
      5. Explain the situation where in which the cocaine blood concentration is greater that the benzoylecgonine blood concentration.
      6. What is the half-life of cocaine and benzoylecgonine?
      7. What are the signs and symptoms you would expect to see from using cocaine?
      8. Discuss the effects of cocaine on driving.

   3. Opiates, Opioids, Narcotics (~2 weeks)
      1. Define the terms: opiates, opioids and narcotics
      2. Discuss the absorption, distribution, metabolism and elimination of heroin.
      3. What is the mechanism of action of opiates?
      4. Discuss why heroin is more potent than morphine.
      5. What are the metabolites of heroin, oxycodone, codeine, and hydrocodone? Are they active/inactive?
      6. What are the half-lives, therapeutic levels, and detection window times in blood and urine for morphine, hydrocodone and oxycodone?
      7. What are some common signs and symptoms you would expect to see from using opiates/opioids?
      8. What are the CNS effects of opiates that would be relevant to a driving under the influence case?
4. Cannabinoids (~2 weeks)
   1. What are the major metabolites of THC? Are they active/inactive?
   2. What is the mechanism of action of THC?
   3. How long after the cessation of marijuana use can COOH-THC be detected in urine?
   4. Explain how THC may no longer be detected in blood after recent usage.
   5. What are other cannabinoids found in marijuana? Are they active/inactive?
   6. What is the half-life of THC and the major metabolites?
   7. What are some common signs and symptoms you would expect to see from using marijuana or THC?
   8. THC has a broad spectrum of pharmacological effects, describe each and how they may or may not affect the ability to operate a motor vehicle safely.

5. CNS depressants (~2 weeks)
   1. Make a list of the following drugs (diazepam, oxazepam, clonazepam, lorazepam, flunitrazepam, chloralhydrate, carisoprodol, zolpidem, GHB, barbital, phenobarbital and secobarbital) Include the following: dosage form, therapeutic usage, therapeutic ranges, half-life, toxic concentrations, typical adverse side effects.
   2. What is the general mechanism of action for CNS depressants?
   3. List the expected range of values, in blood and urine, for endogenous and exogenous GHB in antemortem and postmortem cases. What considerations should be made in interpretation of a low-level GHB result?
   4. What, if any, is the potential in-vitro change in the concentration of GHB, collection and storage of the sample?
   5. What are some common signs and symptoms you would expect from using CNS depressants?
   6. What are the CNS effects of the benzodiazepines that would be relevant to driving? How do these effects compare with the effects caused by alcohol?

6. Hallucinogens, Dissociative Anesthetics, Inhalants (~2 weeks)
   1. List and describe the common adverse effects of LSD.
   2. List and describe the common adverse effects of PCP and Ketamine.
   3. Explain why it may be difficult to detect inhalants in blood. What factors may support that an individual is abusing inhalants that may only be present during the investigation?
   4. Discuss the significant adverse effects of hallucinogenic drugs on driving.
   5. What is Serotonin Syndrome? Describe some of the signs and symptoms.

v. Hypothetical Scenarios and Miscellaneous Topics (~1 month)
   1. The information given by the Deputy District Attorney is limited to the concentration of drug in blood determine by the laboratory. What is your opinion with regards to drug influence or drug impairment? Is there a difference?
   2. Laboratory results indicated the presence of alcohol and methamphetamine in the person's blood. What poly-drug effects can one expect from the individual? Discuss how the presence of the above mentioned drugs may or may not interact with each other.
   3. Discuss the factors that should be taken into consideration when forming an opinion about whether a person is under the influence of a drug.
   4. Discuss the factors that should be taken into consideration when forming an opinion about whether a person is impaired by a drug.
   5. Explain how you may go about researching information on a drug that is not commonly encountered.
6. The signs and symptoms observed for an individual are: low pulse and blood pressure, constricted pupil size, and the individual is nodding off. The urine results are positive for amphetamine and methamphetamine. What is your explanation for this type of situation?

7. For an individual suspected of being under the influence of stimulants, what is the typical effect on the individuals pulse? Explain why during the DRE process, 3 pulses are taken after a substantial time has elapsed between each pulse reading? If only one elevated pulse is acquired for the same above mentioned individual, explain how it may or may not changed your opinion regarding influence due to stimulants.

4. **Assessment:**
   a. The trainee will complete the Impairment/Effects of Drugs question sets
      i. The questions will be reviewed by the Supervisor or designee and written feedback will be provided
      ii. The Supervisor or trainee may review the questions after each topic set is complete

5. **Competency:**
   a. The Supervisor will administer a mock court to the trainee in any area of drug impairment within the realm of analysis of the toxicology unit
      i. The Supervisor will document the mock court through a written evaluation
   b. The Criminalist may begin drug impairment testimony after successful completion of the mock court module and upon authorization from the Manager/Supervisor.

6. **Documentation:**
   a. The following will be signed and dated by a Supervisor
      i. Mock court evaluation after feedback has been given
      ii. Questions with feedback of Supervisor, trainee, or designee

END OF DOCUMENT
I. **Policy:** The following is the procedure for using Lab Solutions Software for running the LC-MS/MS instrument

A. These suggestions are intended to be a guide for usage and slight variations may be made for file names, names of folders, etc.

B. **Start Lab Solutions - the user is ”Admin”, there is no password**
   1. From Instruments select "LC1"
   2. The method parameters are not applied to the instrument on start up.
      a. If a method is active but not in use, it will still consume mobile phase and gas
   3. Pumps, column oven and MS can be turned on individually from Data Acquisition if needed
   4. It is recommended to close the method currently loaded before loading a new method (File> Close Method)
   5. When a method is loaded, the edit method screen will appear
      a. To apply the instrument parameters, select download and close
      b. To return to the main page without applying parameters, select close
   6. The instrument should be shut down when not in use. This can be set automatically within a sequence or manually by choosing Shutdown from the Data Acquisition screen.

C. **Running Samples:** Samples are run using Realtime Batch
   1. Realtime batch is accessible from the tab or from the Window menu in the Realtime Analysis Lab Solutions software
   2. Previous batches can be used as a template (analyst may have to copy an existing batch into their folder using Explorer). (File >Open Batch) Analyst should create a new sequence for each batch of samples run on the instrument (typically the batch is named by date)
      a. Using a sequence of the same type of extraction as a template will minimize alterations required to prepare a sequence
   3. If the analyst uses a past batch, they must ensure that the standards and concentrations listed match the concentrations used.
   4. Make changes to the batch by editing the table
      a. The field in one sample can be edited and then applied to the entire batch by right clicking and selecting Fill Down (copy field) or Fill Series (increments number in the field)
   5. The table can contain different fields. Ensure the the following fields are present and populated as needed below. Fields can be added or deleted by right clicking on the table and selecting "Table Style"
      a. **Tray Name** - the 10 position tray is Tray 0, the 105 position tray is Tray 1
      b. **Vial** - indicate the location of the sample vial on the autosampler tray
         i. Entering "-1" will run the method without injecting any sample
      c. **Sample Name** - enter a sample description; the description should be either blank, Std or QC with concentration, or the specimen lab number including request.
      d. **Sample ID** - additional sample information
      e. **Sample Type** - standard, unknown
f. **Method** - enter the method to be used for data acquisition. This includes the file location.
   i.  Note: The Method can be edited for individual samples

   g. **Data File** - enter the name of the data file. This includes the file location
      i.  The sample in line 1 of the sequence table should be named using a date format, such as MMDDYY01 or YYMMDD01, each subsequent line should be identified similarly, with only the two digit number at the end of the name changing to correspond with the sample line.
      ii.  For example, in a sequence with 18 lines, the sample in line 1 will be identified as YYMMDD01, while that in line 18 will be YYMMDD18. To fill in this data automatically, enter the correct name in line 1, highlight/select the entire column, then right click and select Fill series.

   h. **Injection Volume** - The volume that will be injected onto the instrument. This should be the same for all standards and case samples within the batch

The following fields may also be present:

   i.  **Level** - calibration level

   j.  **Analysis Type** - quantitation, library search

6. Save the batch
   a.  Select File > Save Batch As
   b.  The batch file can be saved in the same folder as the data files
   c.  Name the sequence using a date format, such as MMDDYY## or YYMMDD##, where the ## is a two digit number indicating the sequence number. For the first sequence of a particular day, the sequence would be named YYMMDD01, each subsequent sequence would be numbered 02, 03…as appropriate.
   d.  Ensure the sequence is saved with the appropriate file extension (.lcb).

7. Print the Sequence
   a.  Select File > Print Batch Table
   i.  The appearance of the printout can be edited using File>Print Batch Table>Edit format
      1.  The batch report should have at least the tray and vial position, sample name, method name, data file name and injection volume
   b.  The printed sequence can be used to ensure that vials are placed in the correct positions on the autosampler.
   c.  The sequence will be archived with the batch results

8. Select Start from the Batch menu or select Start Realtime Batch from the side toolbar
   a.  If no samples are selected, it will automatically run from the beginning
   b.  If one or more samples are selected, a dialog box will open with the option to start from the beginning or run only specific lines from the table

D. **Mobile Phase Usage**

   1.  The software can keep track of mobile phase usage and provide warnings if the volume gets low, preventing air from entering the system.

   2.  From the Acquisition window, click on Mobile Phase Settings
      a.  Enter the volume in the reservoir (A, B and rinse) and click OK
         i.  This is the volume of solution, not the total capacity of the reservoir
      b.  Select desired warnings for each reservoir

   3.  As the instrument runs it will calculate the amount of mobile phase used and give a warning if it reaches a set level

   4.  When the reservoirs are refilled, the values must be reset

II. The **Lab Solutions software can help with optimizing method parameters**
A. Precursor ions, product ions and MRM transitions are chosen during method development. The optimization parameters used depend on the tune of the instrument. Over time, it may be required to reevaluate the parameters. The nominal values of precursor and product ions cannot be changed without additional validation, but the optimization parameters can be updated.

B. The optimization should only be done with a single standard at a concentration of around 1 µg/ml. The sample is run on a flow injection method (an LC method which uses the autosampler but bypasses the installed column).

C. Product ion scan
   1. On the MS tab of the method parameters, there should be one event for a "Product Ion Scan"
      a. Enter the mass range to scan and the mass of the precursor ion (this will typically be the molecular weight of the compound +1)
      b. Generally a collision energy of -30 is acceptable
   2. When the sample is run it will produce the fragmentation pattern of the selected precursor ion

D. MRM optimization
   1. Once the precursor/product ions are chosen, the MRM parameters for each transition can be optimized. This includes the Q1 bias, collision energy and Q3 bias.
   2. This uses a flow injection method (no column) for a single standard
   3. In the MS tab of method parameters, there should be one event for MRM
   4. In the MRM settings, enter each transition. It is okay to enter the nominal mass value. A dwell time of 100 is acceptable
      a. Download and close. Save the method
   5. From the Acquisition tab, select "Optimization for method"
      a. Select Optimize Voltage
      b. Select the values to be optimized: adjust precursor m/z, optimize voltage, adjust product m/z
      c. Select and output folder and select "Apply to Method File"
      d. The instrument will run through a series of optimizations. The parameters will be save in the method settings.
   6. To update an existing method with the new optimization parameters:
      a. Load the complete method
      b. Select Method>Add MRM event and select the method with the optimized parameters for the single compound
      c. The transitions and optimized settings will be added to the method.

E. Loop time/Dwell time
   1. Once all the transitions have been added to a method, or if the number of transitions has changed due to overlap of events, the Dwell time should be updated.
   2. From the MS tab of the method editor click on "Loop time"
   3. Enter the target value for maximum loop time. This depends on the peak widths in the method, but around 0.5 min is typical. Use the narrowest peak in the method to determine loop time.
   4. Click on "Calculate Dwell time" and then "Apply to Method"
   5. This will update the method parameters with an appropriate dwell time for each transition

F. The optimization parameters are geared toward maximizing sensitivity, based on the use of a single neat standard. Method parameters may be adjusted as needed from the optimized parameters based on desired response within the method as well as the presence of other compounds.

END OF DOCUMENT
I. Policy: The Liquid Chromatograph/Tandem Mass Spectrometer (LC/MS/MS) instrument will be checked to ensure its reliability. Maintenance will be carried out if needed according to the procedures below.

A. The LC system is composed of multiple units
   1. System Controller
      a. The controller unit functions to coordinate the individual units of the system
      b. The controller must be turned on
      c. There is no routine maintenance for the controller
   2. Degassing Unit
      a. The Degassing unit removes dissolved gasses from the mobile phase. This prevents bubbles in the system which can impact the functioning of the pumps and produce noise or fluctuations in the chromatography.
      b. When running, the degasser pressure is typically around -95 kPa
      c. The unit has filters that may need to be replaced if they become dirty. This can be performed by service personnel or refer to DGU-20A3R manual. Maintenance will be recorded in the maintenance log.
      d. If the unit will not be used for an extended period of time, the unit should be turned off, solvent removed and in/out ports capped.
      e. The system can be used without the degassing unit if an alternate method of degassing the mobile phase is employed.
   3. Solvent Delivery Module (Pump)
      a. The Solvent Delivery Module pumps the mobile phase through the system. There are two units to provide mobile phases A and B.
      b. The pumps have a pressure limit of 9500 psi. Pump pressure depends on solvent composition, column size and composition, and flow rate. The unit will abort if the pressure limit is exceeded.
         i. A higher than normal pressure for a method may indicate a clog
         ii. The most likely location of a clog would be in-line filter/guard column/column
         iii. If present the in-line filter or guard column should be changed. If necessary, the column can be changed.
      c. The unit should be purged if new mobile phase is installed or if the instrument has not been used recently. The purge can be performed automatically as part of a batch, initiated from the software or performed manually.
      d. To perform a manual purge:
         i. Open the drain valve by turning the drain knob counterclockwise
         ii. Press the purge button
         iii. The purge time and flow can be changed from the keypad if needed
         iv. Once purging is complete, return the drain valve to the closed position
      e. Plunger, seals, diaphragms, valves and filters may require cleaning or replacement if they become worn or damaged.
i. Maintenance may be performed by Service personnel or refer to the instruction manual for LC-20AD. Maintenance will be recorded in the maintenance log.

4. Autosampler
   a. The autosampler holds the samples to be analyzed and injects samples onto the column.
   b. There are two trays. Tray 0 holds 10 vials and Tray 1 holds 105 vials. The trays can be cooled to prolong stability of samples. This can be set in the method parameters.
   c. The needle is cleaned by a rinse solution. The rinse solution is chosen based on the properties of the sample being analyzed. Rinse parameters are set in the method.
   d. The autosampler should be purged if a new rinse solution is installed or the instrument has not been used recently. The purging can be performed through the software or manually.
      i. To perform the purge manually: Press purge on the front keypad.
   e. The needle, seals, valves and filters may require cleaning or replacement if they become worn or damaged.
      i. Maintenance may be performed by Service personnel or refer the instruction manual for SIL-30AC. Maintenance will be recorded in the maintenance log.
   f. If the unit is not going to be used for an extended period of time, the needle should be raised to its highest position.
      i. On the front keypad, press the up arrow button. When "ZHOME" is displayed on the display, press enter. The unit can then be turned off.

5. Column Oven
   a. The column oven contains the mixer, switching valve and column. The oven controls the temperature of the column.
   b. The switching valve allows for multiple flow configurations.
      i. The flow path can bypass the column for method optimization experiments.
   c. The flow out of the column oven can be directed to the mass spectrometer or to waste.
      i. Sending the flow to waste when possible will minimize contamination of the mass spectrometer.
      ii. The flow is controlled by the method.
   d. There is a leak sensor in the oven.
      i. If a leak is detected, correct the source of the leak, completely clean up the leak and allow the vapor to dissipate before continuing.
      ii. The sensitivity of the leak Sensor can be adjusted, see instruction manual for CTO-20AC.
   e. Installing the column.
      i. The column should be placed in the column clamps.
      ii. Check the direction of flow marked on the column.
      iii. The stainless steel tubing attaches at the inlet end and the PEEK tubing attaches to the outlet.
      iv. Fittings should be finger tight.
      v. The type and serial number of the column will be recorded with each batch.
   f. Storing the column.
      i. The column can be stored outside of the column oven when not in use.
      ii. The column should be flushed with organic solution (without any additives).
      iii. Remove from fittings and cap both ends, the column can be stored at room temperature.
   g. Guard column.
      i. The guard column is optional, but will help prolong the life of the column.
      ii. The guard column in composed of the same material as the column.
      iii. The guard column is installed on the inlet side of the column and requires a cartridge holder.
h. In Line Filter
   i. The in line filter is optional, but can help protect the instrument from particulates
   ii. The in line filter is installed prior to the column and guard column (if installed)

B. The mass spectrometer removes the liquid flowing out of the LC system, ionizes the sample and filters ions based on the mass/charge ratio. The mass spectrometer has a quadropole (Q1), a collision cell and another quadropole (Q3).
   1. Tuning
      a. The tune of the instrument is stable and only needs to be done after maintenance has been performed on the detector
         i. It is important that tuning not be performed if the instrument has lost sensitivity and needs to be cleaned
         ii. When a tune is performed, it will be recorded in the maintenance log. A copy of the printout will be included in the maintenance binder.
      b. The tuning solution is contained in the Standard Sample Introduction Unit, below the ESI unit
         i. When using Auto-tuning, pressurization and introduction of tuning solution is automatically controlled
         ii. The bottle should contain 40-80 mL (the tubing must be submerged in solution)
         iii. Each auto-tune will use about 1 mL of solution
      c. From LabSolutions Main menu, select tuning
         i. Connect the tubing from the standard sample to the ESI probe
         ii. Auto-tune will adjust detector for sensitivity, resolution and mass calibration
         iii. The tune will take about 40 minutes
         iv. When tuning is complete, save the file and select yes to save as the default tuning file
         v. Interpretation
            1. Detector voltage should be around -1.6 to -3.0 kV
               1. Voltage around -2.7 kV indicates the detector may need to be replaced
            2. Pressure of the interface unit should be around 130 Pa (PG)
               1. If the pressure is < 40 Pa, the desolvation line may be clogged
            3. The tune report has three different acquisition modes: Q1 scan, Q3 scan, and Product Scan
               1. Q1 and Q3 scan modes evaluate each quadropole independently
                  1. Positive mode uses ions of the nominal value: 48, 168, 256, 300, 652, 1004, 1224, 1603
                  2. Negative mode uses ions of the nominal value 503, 1007
               2. Product scan uses both quadropoles and evaluates transitions
                  1. Positive mode uses transitions from 388 > 45, 89, 133, 177
                  2. Negative modes uses transitions from 503 > 89, 179
               3. FWHM (peak width) is 0.7, values must be between 0.51-0.8
               4. Actual m/z must be within 0.15 of target m/z
               5. For Q1 and Q3 scans in positive mode, m/z of 1224 should be greater than 200,000
      2. The instrument is equipped with an electrospray ionization unit (ESI) to take the sample from the LC system and introduce it into the mass spectrometer
         a. The desolvation line heats the sample to help remove solvent and introduce ions into the vacuum
            i. PG vacuum around 60-70 Pa indicates the line may require cleaning or replacing
            ii. It is not necessary to stop the vacuum to clean the line
            iii. Remove the ESI unit
1. Important: Turn the high-voltage off in the LabSolutions Software and turn all temperatures down
2. Turn the LC pump and gas off from LabSolutions Software
3. Disconnect LC tubing
4. Unlock the ESI unit (slide knob on the bottom right side to the left), lift the unit upward to remove it

iv. To access the DL:
1. Loosen the two screws with the hex wrench
2. Insert the drawing tool under the heated block to remove the heater flange
3. Disconnect the connector
4. Loosen the DL locking screws with the hex wrench (about 3 turns)
5. Turn the notched sections so the DL can be drawn out

v. The DL line can be cleaned with acetonitrile or isopropanol
1. Blow clean air to evaporate the solvent before reinstalling
2. If the clog cannot be cleaned, replace the line

vi. Reinstall the DL line
1. Insert the line and turn the notched sections counterclockwise
2. Connect the connector
3. Secure the DL locking screws
4. Insert the heating block using the drawing tool and tighten the screws
5. Re mount the ESI unit and secure the lock by sliding the knob to the right

vii. Replacing or cleaning of the line will be recorded in the maintenance log.

b. The lens system focuses the ions and introduces them into the quadropole
   i. The lens system consists of the Qarray, skimmer, multipole and entrance lens
   ii. The lens system is accessed through the Multipole maintenance cover on the top of the instrument
   iii. The vacuum must be stopped to access the lens system
   iv. To be cleaned, the parts can be sonicated in methanol and allowed to air dry before reinstalling
      1. See LCMS 8050 manual "Maintenance of the Lens System" for further information
   v. Maintenance will be recorded in the maintenance log.

3. The vacuum system is composed of a rough pump and turbo pump. There are four vacuum chambers.
   a. The rough pump evacuates the first vacuum chamber (Qarray section) and the rear part of the triple inlet turbo pump
   b. The turbo pump evacuates the remaining vacuum chambers (multipoles and detector)
   c. Only the first chamber (PG) and fourth chamber (IG) have vacuum gauges
   d. To stop the vacuum system: from system control, select Auto Shutdown
   e. Rough pump maintenance (scroll pump)
      i. Ballast the pump
         1. The ballast has three positions: 0, I, II
            1. 0 provides the strongest vacuum, the pump should be in this position when the instrument is running
            2. I and II provide increasing levels of flow that can help clear out condensable vapors
2. The pump should be ballasted weekly by allowing the pump to run in position I for about 20 minutes
   1. This helps clear out vapors that may condense and contaminate the pump
   2. The frequency of ballast can be adjusted based on use
3. If a large amount of vapor has been introduced the ballast can be run on position II
   1. Running on position II increases the wear on the tip seals
4. If the pump will be shutdown for storage, ballast the pump on position II for one hour before shutting down
   ii. Replacing the tip seals (approximately 9000 hours)
      1. The vacuum system must be shut down
      2. Follow directions provided by Edwards kit A731-01-801
      3. This will be recorded in the maintenance log.

f. There is no routine maintenance for the turbo pump

4. For additional maintenance, see the LCMS 8050 manual.

C. The moisture trap for the gas line(s) shall be checked quarterly. The check will be logged in the Sheriff Specialist Safety Checks. See SAFF.04.04. The LC-MS/MS uses the argon gas line. The nitrogen and clean air lines from the generator do not have filters.
   1. A change in the color of the indicator beads is a sign of moisture or oxygen present and the trap/filter kit needs to be replaced.
      a. Moisture Trap, the original color is yellow originally and turns clear when saturated
      b. Oxygen Filter, the original color is green originally and turns grey when saturated
   2. Procedure for changing moisture traps:
      a. Turn off the main gas line.
      b. Refer to manufacturer's instruction for replacing the trap/filter kit.
      c. REMEMBER: Changing the filters on the carrier gas line means that the mass spectrometer should be in shutdown mode, unless the procedure is performed rapidly. If proper shut down is not performed, the mass spectrometer may be damaged.
      d. Changing the trap/filter will be logged in the Sheriff Specialist Safety Checks. See SAFF.04.04.

END OF DOCUMENT
I. Policy: The following equipment supports the use of the LC-MS/MS

A. Nitrogen Generator
   1. The Nitrogen generator can supply both nitrogen and clean, dry air to the instrument instead of using compressed gas cylinders
      a. The generator must be on while the LC-MS/MS instrument is running
      b. The generator can be turned off if not needed for an extended period of time
         i. When turning back on, allow at least 10 minutes for the generator to pressurize before activating the instrument
   2. While running, the compressor output gauge will read around 115 psi
   3. During operation, water is drained into a container next to the generator
      a. The water container must be emptied as needed
   4. If the high temperature light is lit, stop the generator and call for service
   5. Routine Maintenance
      a. Every 8700 hours, filters and tip seal should be replaced. This can be done by service personnel or refer to the NitroFlow60 manual.
      b. Maintenance will be recorded in the nitrogen generator maintenance log.

B. Power Converter
   1. The power converter reduces noise in the electrical system. If using, all components of the LC system should be plugged into the power converter.
   2. The Power Converter does not require routine maintenance.

C. Glassware
   1. The LCMS system is sensitive to undissolved solids which can cause blockages in the system. This includes dust and bacterial growth that may not be easily visible.
   2. Glassware used to hold or prepare mobile phases or other samples should receive extra care.
   3. To ensure cleanliness, it is recommended to rinse all glassware with a small amount of LCMS grade solvent prior to use. Mobile phase storage bottles should emptied and rinsed even if the same solution is being added.
   4. If the glassware stored an aqueous solution, rinse with an organic solvent to disrupt any growth that may have occurred. Rinse again with clean water prior to filling.

END OF DOCUMENT
The Office of the Sheriff exists to serve the community. The protection of people and their property is our primary responsibility. Honor, Courage, Commitment, Leadership, and Teamwork shall be the core values employed as we serve the citizens of Contra Costa County.

The responsibility of the Investigation Division is to conduct follow-up investigations of all reported felony offenses and certain misdemeanor offenses that occur in the unincorporated areas of Contra Costa County. Detectives also follow up on the same crime types committed in the contract cities and special districts.

Detectives are dedicated to efficient, timely and thorough criminal investigations to determine facts as they relate to the innocence or guilt of those suspected of criminal activity. The objectives of such investigations are the identification and prosecution of those individuals responsible for the crime.
Preface

This Manual is, and shall be, a composite of the current practices, objectives, principles, policies and administrative procedures governing the operation of the Sheriff’s Office and the Field Operations Bureau, Investigation Division.

This Manual has been designed to provide a clear understanding of the constraints under which members of this Office operate, and the expectations that they are to fulfill.

The policies and procedures listed herein are meant to serve as positive guidelines for actions by members of this Office. They are meant to be “attitude forming,” to set limits of discretion, and to provide a method to achieve an objective. This Office assumes responsibility for official conduct or acts that are directed by, or in compliance with this manual.

This Manual supersedes all previously issued Investigation Division Manuals and procedural memorandums. It does not supersede any applicable State or Federal laws.

Infractions in policies, and the practice of poor procedures, decrease the public’s confidence in law enforcement and this Office. It is the responsibility of all employees to thoroughly acquaint themselves with this Manual and use it as a guide in the performance of their daily operations.

Many of the directives contained within this Manual must change as the need for change occurs. In that regard, it is my hope that members of this Office will put forth their ideas so that the manual may be kept up-to-date and progress with time.

Suggestions for corrections or additions to this manual may be submitted via your chain of command.

Melissa Klawuhn
Investigation Division Commander
December 2019

I. POLICY

A. The Contra Costa County Office of the Sheriff’s Investigation Unit will ensure assigned personnel are familiar with their assigned duties and responsibilities.

II. GENERAL INFORMATION

A. Division Commander Responsibilities

1. The Investigation Division Commander, a Sheriff’s Captain, is responsible to the Field Operations Bureau Commander for the management and direction of the operations in the Division. The Division Commander plans, advises, counsels, and directs major Divisional activities; formulates special orders, policies, and procedures, and ensures compliance with same; coordinates major staff and line functions, and ensures the functions are discharged effectively. In addition, the Division Commander may supervise major and/or sensitive crime scenes and investigations, officer-involved shootings, media contacts, and coordination with various agencies.

B. Division Assistant Commander Responsibilities

1. The Division Assistant Commander, a Sheriff’s Lieutenant, is responsible to the Division Commander for assisting in the management and direction of the operations of the Investigation Division. The Division Assistant Commander advises, counsels, and assists in major Divisional activities; reviews and approves operational plans; prepares homicide call-out schedule; performs press releases when necessary; coordinates administrative staff functions; coordinates in-service training for staff and line personnel; coordinates the replacement and assignment of the Division’s vehicles; reviews the Division Manual on a yearly basis; adds/incorporates any memorandums addressing the content therein; and assumes command of the Division in the Division Commander’s absence.

2. Conducts audits of Investigations Units to ensure reports are assigned and completed in a timely and efficient manner.
3. Will ensure each unit supervisor provides monthly updates on status of open and active cases.

4. Issues equipment and maintains an up-to-date equipment inventory.

C. Unit Supervisors

1. Unit Supervisors, Sheriff’s Sergeants, are responsible to the Division Assistant Commander for the complete and proper disposition of all duties assigned to their respective units; inspect personnel and equipment; monitor the functions of the Unit, including ensuring close adherence to policies and procedures; collect and review all reports, assign cases to Unit personnel; prepares and reviews operational plans; conducts field briefings; review investigative progress and final dispositions; approve cases for submission to the District Attorney; provide direction and assistance for Detectives as necessary; evaluate and report personnel performance; perform supervisory functions for personnel assigned to the Unit; review CLETS, NCIC, and all pertinent data entries, and complete a monthly statistical report. Unit Supervisors will review all search warrants prior to submitting to a judge for consideration. A Unit Supervisor shall be present at the service of all search warrants, probation and parole searches.

D. Detective

1. Detectives are responsible to their Unit Sergeant and, in his/her absence, the Division Assistant Commander, for the effective and efficient disposition of cases assigned; investigation of crimes; identification and apprehension of criminals; recovery of stolen property; preparation of case reports; testimony in court; and performance of other duties, as required.
I. POLICY

A. Detectives assigned to the Investigation Division shall be issued the items on the Investigation Division Equipment List.

B. It is the responsibility of each Detective to ensure the proper care and maintenance of the issued equipment.

C. The loss, damage, or unserviceable condition of any County equipment shall be reported to the Unit Supervisor or Division Assistant Commander. Each of these scenarios will be documented utilizing official memo format, and directed via the chain of command to the Division Commander.

D. Any Sheriff’s Office Policies and Procedures Manual sections that apply shall be adhered to in conjunction with this section.
Chapter Two - Unit Duties and Responsibilities

3.2.1 Homicide Unit
3.2.2 Special Victims Unit
3.2.3 General Investigation Teams
3.2.4 Misdemeanor Complaints
3.2.5 Special Investigations Unit
3.2.6 Vice Investigations and Asset Forfeiture
3.2.7 Civil Unit
3.2.8 Community Services Unit
I. POLICY

A. The Office of the Sheriff’s Homicide Unit will:

1. Follow-up on all homicide, manslaughter, officer-involved fatal and non-fatal incidents where the force used resulted in major injury or death.

2. Investigate in-custody deaths that fall within the fatal incident protocol policy.

II. PROCEDURE

A. The Homicide Unit is responsible for the following offenses:

1. All homicides

2. Deaths involving suspicious circumstances

3. Criminally related or suspicious deaths occurring within the Contra Costa County Detention Facilities

4. In-custody prisoner deaths

5. Officer-involved fatal incidents resulting in injury or death within the unincorporated areas of Contra Costa County or any jurisdiction that provides contract law enforcement services.

6. Homicide Detectives may be dispatched to the scene of a CCCSO officer-involved shooting in another jurisdiction if such response is deemed appropriate by the Homicide Unit Supervisor, the Division Assistant Commander or the Watch Commander.

   a. The role of the responding CCCSO Homicide Detective in such cases shall be to offer assistance to the venue agency having investigative responsibility.
b. No CCCSO Detective shall play an active role in the investigation, nor initiate an investigative function, unless the investigative venue has been relinquished by the venue agency in accordance with the County O.I.F.I. and CCCSO O.I.F.I. policies.

7. Deaths of children wherein the cause of death appears to be associated with homicide, child neglect, abuse, or molestation shall be investigated by the Homicide Unit.

8. Case responsibility in cases deemed to be abduction only shall rest with the Special Victims Unit.

9. Homicide Detectives will not be responsible for conducting administrative investigations related to the investigation of any offenses, as described in this section, without authorization from the Division Commander.

10. Any investigation as directed by the Division Commander or Division Assistant Commander.

B. Homicide/Major Felony Call Out Procedure

C. Major Incident/Officer Involved Fatal Incidents

1. If a fatality has occurred as a result of a police action, where there is direct involvement by a Deputy Sheriff, the current call-out procedure will be invoked (Officer-Involved Fatal Incident Protocol).

2. If an incident occurs involving an officer’s use of deadly force, where no fatality or life-threatening injury occurred:

   a. The on-call sergeant will use his or her discretion regarding response and will make the following notifications:

     - Division Assistant Commander
     - The on-call District Attorney
D. Press Release Information

1. Telephone messages or press calls will be referred to the Division Assistant Commander or the Public Information Officer.

2. Press calls should not be referred to Investigators in the field who are actively working a death investigation.

E. Major Incident/Officer Involved Fatal Incidents

1. Refer to Sheriff’s Office Policy regarding Police-Involved Fatal or Serious Injury Incidents.

F. Review of all Death reports

1. The Homicide Unit Supervisor will review patrol reports of all suicides, non-criminal, and deaths of unknown cause within the unincorporated jurisdiction of the Sheriff’s Office.

G. Autopsy Room Protocol

1. Coroner’s Office policy requires all those present in the autopsy room to wear protective clothing.

   a. This requirement is part of our continuing effort to maintain a safe and secure environment during an autopsy and as a means to lessen the possibility of any airborne and/or blood-borne pathogens from coming in contact with observers during an autopsy.

2. Refer to the Office of the Sheriff Coroner’s Division Manual for details regarding autopsy protocol and procedures.
I. POLICY

A. The Special Victims Unit is comprised of four elements: Sexual Assault/Child Abuse, High Tech Crimes, Domestic Violence/Elder Abuse, and Sex/Arson Registration.

B. The Special Victims Unit is responsible for the following:

1. All felony sexual assaults
2. All felony child abuse/neglect cases, including:
   a. Child Interview Center (CIC) scheduling, observation and documentation
3. All kidnapping cases
4. Child pornography cases, including Internet child pornography
5. All child abductions
6. High Tech computer crimes
7. Elder and Domestic Abuse
8. Sex/Arson Registration, which duties include:
   a. Register offenders who are required to do so, per P.C. 290
   b. Monitor registrants
   c. Investigate non-compliant registrants
   d. Conduct public and individual “Megan’s Law”
disclosures/notifications, when required by law, about P.C. 290 registrants, as deemed necessary for public safety

e. Provide information, upon request, to Child Family Services and the courts concerning registered sex offenders for the safety of children

f. Provide additional assistance and expertise, as directed by the Special Victims Unit Supervisor, Division Commander or Assistant Division Commander.

II. PROCEDURE

A. Sexual Assaults Resulting in Abortion or Live Birth

1. The aborted remains are considered criminal evidence. A search warrant should not be necessary for the collection of the fetal remains.

2. The following procedure is recommended for handling cases where a sexual assault results in pregnancy and abortion.
D. Live Births

1. A Buccal Swab should be obtained from the infant and the suspected father. Processing is the same as any other DNA case.

2. The Sheriff’s Criminalistics Lab can be contacted for questions concerning the handling of these cases.

E. SART exams

1. SART procedures will be followed as outlined in Appendix 2
I. POLICY

A. The General Investigation Unit (GIT) is divided into two teams, General Investigations Team (GIT) and Misdemeanor Complaints.

1. **GIT**: Team will handle investigative responsibilities for cases generated out of the unincorporated county area.

2. **Misdemeanor Complaints**: Team will handle all misdemeanor crimes and all missing persons, both Juveniles and Adults.

B. The General Investigation Team shall be responsible for the investigation of the following types of crimes:

1. Felony Assauls
2. Robberies
3. Felony Weapons Violations
4. Burglary
5. All Felony Thefts
6. Receiving Stolen Property
7. Forgery
8. Counterfeiting
9. False Personation
10. Arson
11. Fraud
II. GENERAL INFORMATION

A. All crime reports are reviewed by the Unit Supervisor.

B. All cases are assigned to an investigator by the area of occurrence for follow-up investigation.

III. PROCEDURE

A. Follow-up investigation includes, but is not limited to the following tasks:

1. Thorough and complete collection of physical evidence, either at the scene or in some other location

2. Continuation of development of witnesses

3. Necessary re-interviewing of witnesses

4. Assessment of information and evidence obtained

5. Liaison with Criminalistics Laboratory and assessment of Criminalistics Laboratory analysis

6. Determine and conduct appropriate surveillance, interrogation, and identification processes

7. Preparation of wanted notices and effecting the dissemination of information to other police agencies

8. Coordination of tasks when the investigation extends beyond jurisdictional boundaries

9. Locating and arresting the perpetrator and accomplices

10. Presentation of evidence and statements to the District Attorney for the purposes of reviewing the case for filing of criminal charges.

11. Development of exhibits for presentation in court

12. Preparation and submission of required reports

14. Provide additional assistance and support to crime specific units as needed or directed by Division Command Staff

15. When a “DOJ Audit” request is received from the Records Division, the Detective receiving the request will complete the Validation Checklist and document the completion in a supplemental report, which will include any new information, and a copy of the checklist.
16. **POLICY**

   - Personnel assigned to Misdemeanor Complaints will ensure that all requests for complaint are processed in a timely manner.

17. **PROCEDURE**

   - Filing Complaints with the District Attorney’s Office
     - Personnel will process misdemeanor reports for a D.A. Complaint in the following manner:
       - Retrieve reports routed to Misdemeanor Complaints.
       - Read all reports routed to Misdemeanor Complaints and review for the following:
         - Make sure suspect is an adult, and all identifying information is listed in report.
         - Make sure the elements of the crime are met in the narrative of report.
         - Make sure all witnesses were interviewed by patrol.
         - If the suspect is not present on scene, make sure the beat deputy has made a reasonable attempt to make contact (three attempts spread out over time).
         - If suspect was cited, make sure citation is attached to report.
         - If the report is a restraining order violation, make sure a copy of the order and proof of service is attached to report (if not, request one from Services).
• If any supplements, or other report numbers, are mentioned in the report, a copy must be printed up and attached for the D.A. to review.

• Make sure investigation by the beat deputy is complete, and report is ready to be sent to District Attorney’s Office.

• Enter status of case into Records Management System, i.e.: “Ready for DA,” “Waiting for Lab Results,” “Waiting for TRO,” “Waiting Accident Report”

• Run a criminal history (RAP), driver’s license history, and vehicle registration for each suspect named in the report. Attach printout to report.

• Fill out a Booking Fee Reimbursement Form and attach to report.

• Fill out a Department of Justice Form (8715) and attach to report.

• Log report on list of outgoing reports to D.A.’s Office in Records Management System.

• If the D.A. decides to file a complaint:
  • Check for complaints at both the Richmond Superior Court and 10 Douglas in Martinez.
  • Sign the complaint and forward it to the appropriate court.
  • Enter charges filed by D.A. (Disposition of case) into Record Management System.

• If the D.A. does not file a complaint (NCF):
  • Enter decision not to file into the Records Management System.
  • Review report for any property taken as evidence. Enter the disposition of evidence with specific instructions for return or destruction into the Records Management System.
  • Via email, send a copy of the RTA to the reporting deputy.

• Driver’s License Violations
  • All drivers’ license citations written in the Patrol Division are sent to Misdemeanor Complaints for review to determine if they can be charged as a misdemeanor crime.
  • This is done by reviewing the suspect’s driver’s license history and comparing it to the criteria established by the D.A.’s Office for filing as a misdemeanor.
• If they don’t meet the criteria, they are sent directly to the court to be processed as an infraction.

• If a misdemeanor citation has a report number written on it, a copy of the report must accompany the citation to the D.A.’s Office.

• All missing persons, including adults and juveniles.
  a. The unit will ensure all appropriate entries are made in CLETS, and will conduct follow-up investigation and monitoring until the person is no longer missing.

• Additional Responsibilities:
  • Personnel assigned to Misdemeanor Complaints may also be responsible for the following:
    • Training
      • Providing instruction during the Re-entry class for Patrol.
      • Providing instruction to other divisions (i.e.: new dispatcher orientation, MDF line-up training, etc.)
    • Receiving and reviewing yellow copies of citations issued at the MDF.
      • Check the Record Management System to ensure Misdemeanor Complaints was routed copies of the reports by the Patrol Sergeant.
      • When a report was not routed to misdemeanor complaints, personnel will retrieve and process the citation.
    • Ensuring photos accompany the original report or are properly included through supplemental reports.
  • Gun Confiscations
    • All reports that are written by Patrol regarding guns being confiscated pursuant to Welfare and Institutions Code 8102, or Penal Code Section 18250 are forwarded to Misdemeanor Complaints.
    • Misdemeanor Complaint personnel will ensure the following occurs:
      • Fax the report to the Administrative Lieutenant the same
day. They have a limited period of time in which they can file a petition with the court (as is required by law.)

- Keep a copy of the report on file for future reference.

- If the respondent (or suspect) files for a hearing, the County Counsel Attorney will advise which deputies are needed to appear as witnesses.

- Departmental “subpoenas” (actually an administrative order) advise the deputy of the hearing date and time.

- The service of the “subpoena” will be tracked and a County Counsel Attorney will be advised when the deputy is served.

- Once the hearing is held, if the weapon is ordered returned by the judge, the respondent is referred back to this Office to get the weapon back.

- The Property Services Unit is responsible for releasing the weapon to the respondent after completing appropriate checks to ensure the person is legally eligible to own a firearm, then fax a release form to Property.

- When a “DOJ Audit” request is received from the Records Division, the Detective receiving the request will complete the Validation Checklist and document the completion in a supplemental report, which will include any new information, and a copy of the checklist.

- Exigent Pings:

  When records are obtained by patrol under exigent circumstances, the Misdemeanor Complaints detective is responsible for notifying the Court. This will include a written statement about the facts of the emergency. Once signed by a judge, the Target of the seizure will be notified by certified mail. This notice will occur within 3 calendar days of the seizure.

| ISSUE DATE: 05-01-07         |
| REVISION DATE: 12-11-19      |
| CHAPTER: Unit Duties and Responsibilities |
| SUBJECT: Special Investigations Unit |

### I. POLICY

#### A. The Special Investigations Unit (SIU) shall be responsible for the investigation of suspected drug dealers, users and manufacturers of illicit drugs. The Unit is also responsible for identifying and apprehending major/minor drug traffickers and for conducting surveillance and undercover support for the other Investigations Units.

### II. PROCEDURE

#### A. The Special Investigations Unit is responsible for the following:

1. Conduct follow-up investigations on drug arrests.

2. Obtain criminal complaints on all felony drug arrest cases and appear in court as an expert witness.

3. Respond to community complaints of suspected drug activity and initiate an appropriate response.

4. Respond to Patrol-requested call-outs for clandestine labs or drug investigations, as deemed necessary by the SIU Supervisor.

5. Work as a liaison for the dissemination of drug and/or criminal intelligence information to city narcotic units, Task Forces and government agencies upon request.

6. The Unit Supervisor shall be the custodian of all funds allocated to the Unit and will be responsible for the expenditure of such funds.

7. Work in conjunction with State / Federal Task Forces when necessary in multi-jurisdictional investigations of high level drug trafficking.

8. Conduct surveillance and undercover operations for other Investigations Units as requested.
B.  **Call-Out Procedure for the Special Investigations Unit**

1. Requests for a call-out shall be made by a Patrol Supervisor or Watch Commander.

2. After hours, requests for a call-out shall be made to the SIU Supervisor via the Department-issued cell phone or home telephone number.

3. The SIU Supervisor will make telephone contact with the Patrol Supervisor to gather information and then determine the level of response.

4. An SIU Detective will generally not respond to cases that can be handled during the normal course of duty for Patrol personnel or to take over scenes as standby personnel awaiting the response of the Crime Lab, Health Department, etc.

INVESTIGATION NUMBER: 3.02.06

RELATED ORDERS:

ISSUE DATE: 05-01-07
REVISION DATE: 12-11-19

CLEARANCE: CCCSO

CHAPTER: Unit Duties and Responsibilities

SUBJECT: Vice Investigations and Asset Forfeiture

I. POLICY

A. Vice Investigations shall be responsible for the investigation of gambling, prostitution, and Alcoholic Beverage Control violations. Personnel assigned to Vice also conduct background investigations for licenses and permits issued by the Sheriff’s Office. The SIU Supervisor is responsible for all asset forfeiture investigations.

II. PROCEDURE

A. VICE

1. Personnel assigned to Vice are responsible for the following:

   a. Conduct follow-up investigations on all vice-related crimes.

   b. Respond to community complaints concerning suspected vice-related crimes and initiate an appropriate response.

   c. Monitoring of pawn shops.

   d. Special projects.

   e. Establish a professional working relationship with local, State and Federal agencies.

   f. Conduct thorough background investigations and forward recommendations concerning the issuance of the following licenses/permits; one-day liquor licenses, card room employee permits, card room licenses, fortune telling licenses, massage permits and peddler permits.

   g. The SIU Supervisor conducts all asset forfeiture investigations and submits a report to the District Attorney’s Office for filing, in conjunction with the criminal complaint.
h. The SIU Supervisor is also responsible for maintaining and preparing comprehensive financial records.

j. The SIU Supervisor will review activity and assign cases to Task Force Detectives under his/her command.

B. Asset Forfeiture Procedures

1. On a weekly basis, the SIU Supervisor is responsible for the processing and security of seized assets.

2. Procedure 1: Processing and Security of Seized Assets

b. The SIU Sergeant will ensure an entry on the asset forfeiture log has been made for each case. He or she will then sign the log upon removing the property.

c. The asset seized will be noted on the asset forfeiture tracking document. This document will document all assets that are seized as well as their ultimate disposition. The SIU supervisor will ensure the document is maintained and reflects current assets.

d. The SIU Sergeant will count the currency to verify an accurate count was made. In the case of property other than currency, verification will be made to ensure the property matches the description on the evidence card.

f. In cases involving property other than currency or vehicles, the property will be transferred to the property room within the same time period.
3. **Procedure 2: Cases Pending Proper Notice of Seized Assets**

a. In cases where the SIU Sergeant has determined there has not been a valid service for the assets seized, the SIU Sergeant or Detective will attempt to locate and serve the individual the property was seized from. In cases where the individual cannot be located, the SIU Sergeant will document his attempts to locate the individual and forward the case to the District Attorney for review and processing.

b. The following constitutes an invalid service:

   - Improper documentation or failure to serve the individual with a notice of seizure for the currency or property seized.
   - Where the SIU Sergeant determines that the currency count is inaccurate or the property does not match the description on the evidence card.

c. In the event the seizure needs to be returned due to one of the below listed reasons, the SIU Sergeant will attempt to locate the individual the property was seized from and arrange for its return.

   - Where the SIU Sergeant determines the seizure does not meet the requirements of the civil code governing asset forfeiture seizures.
   - When the District Attorney advises the SIU Sergeant they do not intend to pursue the seizure.

d. When directed by the Division or Division Assistant Commander.
I. POLICY

A. The Civil Unit shall be responsible for serving the process of the Civil Court. Providing a rendition service to the cities within the county and conducting extraditions as an agent of the State of California.

II. PROCEDURE

A. Civil Unit

1. The Civil Unit is responsible for the following:

   a. Serve all process and notices in the manner prescribed by law.

      • The Civil Unit shall execute all process and orders regular on their face and issued by competent authority, presented to the Civil Unit and appropriate fee paid or waived.

      • Conduct all process and notices within the guidelines established by the Code of Civil Procedure and Civil Procedure Manual.

      • No less than three attempts will be made to serve process and notices.

   b. Provide rendition services for those cities in which a rendition contract has been entered.

      • Deputies will seek a waiver of extradition from the fugitive subject.

      • Deputies are responsible for soliciting an identity packet from the demand state, and representing the demanding state at an identity hearing, if needed.

      • Deputies will file a felony criminal complaint (PC1551.1) against the fugitive and appear in court as a witness for the prosecution.
• Deputies will monitor communications for 90 days following Identification hearing, for receipt of a Governor’s Warrant from the demand state.

• Upon receipt of the Governor’s Warrant the Deputies will present the fugitive with the Warrant informing the fugitive they will be extradited to the demand state within a 30 day period.

• Deputies will monitor the extradition on a regular basis until the fugitive is removed from the state.

• Deputies will create a billing/invoice to the arresting agency for the contracted amount for our services.

c. Conduct extradition services for the District Attorney and any other contracted agency.

• The extradition of a fugitive from an asylum state will be governed by the Extradition Clause of the U.S. Constitution, The Federal Extradition Act of 1793 and the Uniform Criminal Extradition Act of 1936.

• Monitor phone, fax and e-mail for notification from asylum state of the arrest of a fugitive.

• Communicate to the District Attorney’s Office the arrest of a fugitive in the asylum state. Confirm with the District Attorney’s Office their desire to have the fugitive extradited. Notify the asylum state of the District Attorney’s desire to extradite the fugitive.

• Create and forward to the asylum state an identification packet within ten days for presentation by asylum state in an identification hearing.

• Create and forward to the California Attorney General an application for a Governor’s warrant department.

• Schedule the physical extradition from the asylum state.

• Provide demand to the Auditor/Controller for advanced travel funds.

• Transport and book fugitive at the Main Detention Facility

• Complete extradition file and present to Supervisor for state reimbursement.

2. Civil Unit Supervisor is responsible for the following:

a. The administrate the processing and reconciliation of the Civil Subpoena program.

• Receive civil Subpoenas and related deposit from the clerical staff.
- Complete Electronic Deposit Permit for the deposited funds and have funds delivered to the Treasurer.

- Provide the subpoenaed party with the “Civil Subpoena Information/Disposition” form.

- Solicit the return of the “Civil Subpoena Information/Disposition” form from the subpoenaed party following the date.

- Distribute the deposited funds accordingly based on the information provided on “Civil Subpoena Information/Disposition” form. Invoice requesting party for any expenses in excess of the deposited amount.

- Bi-Monthly, reconcile the “MTD Subsidiary Detail by SWPC” report to all open Subpoena files.
I. POLICY

A. The Community Services Unit promotes and provides specialized crime prevention services, products and expertise to support the safety and wellbeing of the populace (public and private) throughout unincorporated Contra Costa County. The Unit personnel are responsible for the crime prevention and crime analysis needs of the communities served by the Office of the Sheriff. Central to its concern is the public interest and building goodwill through active community outreach and dialogue with members of the public.

II. DEFINITIONS

A. COMMUNITY RELATIONS. The effective communication and collaboration with stakeholders including the public, Office of the Sheriff personnel, other County departments and government agencies, special districts, community-based organizations, businesses, industry and others. The development of outreach programs that enhance goodwill and meet the crime prevention needs of the communities served by the Office of the Sheriff.

B. CRIME PREVENTION. The pro-active anticipation, recognition and appraisal of a crime risk combined with the initiation of some action to remove or reduce it.

C. NEIGHBORHOOD WATCH. Community Action and Problem Solving crime prevention program designed to help neighbors work together to reduce or remove crime from areas where Neighborhood Watch programs exist.

D. BLOCK CAPTAIN. Serves as liaison between the residents and the Office of the Sheriff.

E. BUSINESS WATCH. Collaboration between law enforcement and local businesses and industry. Seeks to reduce and prevent criminal activity in and around commercial areas.

F. OPERATION I.D. The marking of valuable possessions with an identifying number as an effective method for preventing theft and identifying stolen property.

G. SPECIAL EVENT COORDINATION. This Unit coordinates the Office of the Sheriff personnel and resources for events in which it participates.
H. **TRAINING & PRESENTATIONS.** This Unit provides a variety of subject specific trainings, to include Crime Prevention, Neighborhood Watch, Workplace Violence, Identity Theft, Personal Security and other crime prevention topics for County employees, the public and businesses.

I. **PUBLICITY.** The goal of this Unit is to inform, encourage and remind the public of crime prevention strategies that will reduce crime in their communities, a crucial function in promoting and maintaining the safety and wellbeing of county residents.

J. **CRIME ANALYSIS.** The systematic study of crime and disorder problems as well as other police-related issues—including socio-demographic, spatial, and temporal factors—to assist the police in criminal apprehension, crime and disorder reduction, crime prevention and evaluation.

**III. GENERAL**

A. **PROGRAM.** The Community Services Unit provides crime prevention and community outreach services to County residents, frequently in collaboration with other County departments and government agencies, community-based and service organizations, businesses and industry, neighborhood associations, schools, churches and others. The Unit consists of Crime Prevention Specialists and Crime Analysts.

1. **Crime Prevention Specialists:**
   a. Crime Prevention Specialists are committed to increasing the number of Neighborhood Watch groups in the County. In Neighborhood Watch meetings, Specialists educate the public about Operation ID, recognizing suspicious activity, persons and vehicles, and reporting incidents to the Office of the Sheriff.

   b. Unit employees deliver a variety of services designed to convey CPTED (Crime Prevention Through Environmental Design) and safety and security strategies to the public.

   c. Crime Prevention Specialists run crime reports for each of their area of responsibility. The specialists gather relevant statistical information needed to develop area-specific crime prevention strategies in response to crime trends and patterns.

      • **Business Watch:** Business owners and operators learn techniques to help make their businesses less vulnerable to crime. They learn how to report suspicious activity, thus promoting and maintaining the safety and wellbeing of their business and community.

      • **Municipal Advisory Committees:** MAC’s, Boards and Community Leadership can be informed in the types of quality of life issues that may be affecting their districts/communities to assist in developing ordinances and/or local laws to combat those issues.

   d. Crime Prevention Specialists constructively and positively influence the attitudes of the public through services delivered and relationships established.

   e. The Unit strives to meet the expectations of residents by participating responsibly in community affairs.
f. Unit personnel coordinate and participate in special events working with other county departments, agencies, non-profits, service organizations and businesses.

g. Unit personnel serve as liaisons to MACs, special districts, professional organizations, community advisory panels and special committees.

h. Through practical application, Unit personnel engage in community outreach working with other stakeholders, such as schools, parks and recreation services, etc.

i. The Unit develops awareness of its services, activities, community events and personnel through all external communications and community outreach.

j. Unit personnel host events that bring residents, agencies, non-profits, and businesses together for the common good.

2. **Crime Analysts:**

   a. Crime Analysts are responsible for the collection, compilation and analysis of criminal and/or intelligence data, to include legal and public documents and intelligence reports. Crime Analysts also play an active role in resource deployment and major case development.

   b. Crime Analysts work closely with the Patrol Division staff using statistical data to develop Predictive Patrol strategies. Analysts can also provide statistical data to support other units and divisions within the Office of the Sheriff.

   c. Crime Analysts communicate with other agencies to examine current crime trends and strategies to combat crime.

   d. The tasks of Crime Analysts include:

      • Identify trends in criminal activity and/or calls for service and analyze crime patterns to identify possible suspects or leads

      • Organize and compile criminal intelligence data from internal and external computer databases, and produce and distribute crime trend reports and crime and officer safety bulletins

      • Conduct predictive analysis through the use of regression and other statistical method.

      • Using geospatial techniques, produce maps to aid in the visualization of criminal activity

      • Perform workload analysis and make recommendations for the deployment of resources

      • Respond to citizen and other agency requests (through the unit supervisor) for statistical information.
• Maintain gang and criminal databases in accordance with federal guidelines, and identify/validate gang members via analysis of qualitative data
• Collaborate with and assist investigators in case development
• Provide investigative research using multiple databases and sources, to include the production of link analysis and timeline/event flow diagrams
• Utilize criminal investigative analysis to aid in the investigation of homicide and other major cases and to provide analytical support for major operations
• Write police reports to clearly articulate actions when assisting in major cases and testify in court as needed
• Create court visualization materials to support the prosecutorial process
• Fulfill requests from prosecutors and other partner agencies
• Review current and cold cases for possible leads or evidence and make recommendations as appropriate

B. AUTHORITY AND RESPONSIBILITY

1. The Community Services Unit gathers and disseminates crime prevention information, crime analysis to both the internal and external customers it serves.

2. The duties and efforts made by personnel are significant to the goals and objectives of the Unit and the Office of the Sheriff. Employees adhere to the Policies and Procedures and Division Manuals of the Office of the Sheriff.

3. The Community Services Unit Supervisor is responsible for the overall day-to-day management of the Unit.

4. Each employee of this Unit shall be aware of the responsibilities of his or her position. Employees shall be given the necessary training to effectively execute the responsibilities of their positions.

5. Employees shall bear in mind the best interests of the Office of the Sheriff when exercising their responsibilities.
IV. PROCEDURE 1

A. EMPLOYEE RESPONSIBILITY

1. Under the supervision and general direction of the Community Services Supervisor, Crime Prevention Specialists and Crime Analysts are assigned to serve the communities in each of the Sheriff Office’s four station areas, performing a variety of crime prevention and crime analyst activities.

2. Through effective community relations and crime prevention services, including training and presentations, communications and community events, public awareness is enhanced and crime in our communities is reduced.

3. Unit personnel maintain a collection of crime prevention materials for distribution to the public.

4. Unit personnel build good will by day-to-day communication with residents and other stakeholders, providing crime prevention training, crime analyst information, conflict resolution, presentations and actively participate in community events.

V. PROCEDURE 2

A. SPECIALIZED SERVICES

1. Neighborhood Watch programs are initiated and maintained by Unit personnel. The Unit provides training and support to Neighborhood Watch Captains county-wide to help establish and maintain the Neighborhood Watch groups.

2. Via internal request, Crime Analysts assist the public by providing public reports which outline specific crime trends, patterns and other areas of concern.

3. Crime Prevention Specialists offer periodic presentations to schools, youth groups and other community entities as needed in the County.

4. The Community Services Unit promotes its services through a variety of external communications.

5. Unit personnel pursue all opportunities to publicly address crime prevention issues and strategies. Through various communications – speeches, newspapers, news releases, interviews, broadcast reports, social media and face-to-face meetings, personnel promote the services of the Unit.

   a. Unit personnel develop opportunities to promote crime prevention services via media outlets.

      • Personnel explore all opportunities to positively showcase the Unit and its services.

      • Personnel competently shape public perception with the content of the messages they convey.
b. Unit personnel ensure Community Relations and Crime Prevention services are deliverable.

- Personnel offer expertise, resources and responsiveness that match the needs of the communities they serve.
Chapter Three - Operations

3.3.1 Assignment of Cases
3.3.2 Interviews and Interrogations
3.3.3 Search Warrants
3.3.4 Arrest Warrants
3.3.5 Ramey Warrants
3.3.6 Service of Search Warrants and Arrest Warrants
3.3.7 Call-Out Procedures
3.3.8 Felony Case Filing
3.3.9 Identification and Lineups
3.3.10 Unusual Incident Investigations
3.3.11 Confidential Informants
3.3.12 One-Day Liquor Licenses
I. POLICY

A. Individual cases will be assigned based upon the nature of the crime. When an investigator's team is carrying an excessive case load or handling a critical case, another unit may be asked to assist. Cases will be assigned by the supervisor, immediately upon receiving them.

B. All cases forwarded to the Investigations Division will be reviewed on a daily basis by the appropriate Unit Supervisor. Cases where a suspect has been arrested and remains in custody will receive priority in being assigned to a detective.

C. All cases will be entered into the Department’s RMS Computer/Case Management System by the Unit Supervisor upon being assigned to a detective.

D. Unit supervisors shall utilize an Investigation Division case management log to track cases that are assigned to detectives within their unit.

II. PROCEDURE

A. Assignment of Cases

1. Cases will be assigned by the following categories:

   a. “A” Cases.

      • Those cases considered primary in importance that contain information in the original report which would dictate a follow-up is in order.

      • All “A” cases require personal contact when appropriate.

      • Any case with any of the following is an “A” case:

         • Likely identification of a suspect
• Likely location of a suspect
• Suspect is in custody
• Evidence that would likely identify a suspect
• Likely identification of a suspect vehicle.
• Major injury or sex crime involved
• Significant M.O. present

b. “B” Cases

• The second category of case assignments is the “B Case,” which consists of felony cases that have little information with which to proceed with an investigation.

• Cases with identifiable property, which must be entered into CLETS are “B” cases.

• “B” Cases require contact with the victim to discuss the cases in an effort to determine any additional facts which may result in the case being reclassified to “A” status and to have the victim know which detective he/she should contact in the event further information becomes available.

• A supplement will be written, detailing the action taken on each case.

c. “C” Cases

• The third category of case assignments is the “C Case.”

• These are cases which contain no information with which to proceed with an investigation.

• Examples of the cases are:
  • Auto burglaries with no witnesses.
  • Open garage burglaries with no witnesses.

• “C Cases” will be assigned to a detective by the Unit Supervisor.

• Telephone contact will be attempted by either the assigned Detective or a volunteer.

• A victim information pamphlet will be sent to all C case
With the exception of the Special Investigations Unit, on cases where the investigation lasts longer than 30 days and remains an active, open investigation, investigators will make note of the case status in CAD/RMS within an every 60 day cycle. Notes will be made every 90 days for narcotics cases. Notes will also be made in CAD/RMS if there is ANY activity involving the case (i.e.: supplement, interviews).

e. With the exception of misdemeanor complaints and SIU, all cases will be closed or suspended when appropriate, upon the conclusion of the investigation by the assigned Detective. This will be documented in a supplemental report and noted in CAD/RMS. Otherwise, any cases other than misdemeanor complaints and narcotics will be closed by the unit supervisor.

f. In an effort to establish a uniform system free of ambiguity, the following guidelines have been established for detectives to use in closing cases in the CAD/RMS system.

- SU – Case Suspended – Use this code when you have a property crime where the investigation has stalled. There are no active leads or investigation to conduct. This case is suspended pending the discovery of new evidence. This case will be considered closed.

- SC – Suspended Not Closed – Use this code when you have a crime against person where the investigation has stalled. There are no active leads or investigation to conduct. This case is suspended pending the discovery of new evidence. This case will be considered closed.

- CP – Closed Prosecution – The case has been presented to the District Attorney and is being prosecuted. This case will be considered closed.

- DR – DA Refusal – The case has been presented to the District Attorney and charges were declined / refused. This case will be considered closed.

- UF – Closed/Cleared unfounded - Case has been determined to be unfounded. This case will be considered closed.

- VR – Victim Refusal – Victim refuses to cooperate in prosecution or investigation. This case will be considered closed. Except in Domestic Violence cases or cases we do not need victim cooperation.

- CO – Closed Other – Investigation is complete and it has been determined that no criminal act has occurred or any other closure not listed above. These cases will be considered closed.
B. Routine Investigative Steps

1. Contact of Victims, Witnesses and Suspects
   a. Personal Contact with victims and witnesses is recommended in as many cases as possible and required in “A” cases.
   b. Suspects will be contacted when the investigator determines it is in the best interest of the case.
   c. Suspects will be interviewed at the Field Operations Building whenever possible.

2. Determination of Value (Loss-Recovery)
   a. Determining the appropriate value of loss and/or recovery will be the responsibility of the investigator and not that of the Deputy taking original report.
   b. Frequently, original reports reflect replacement cost of new items rather than a consideration of a depreciation factor or the actual value of the item taken.
   c. Dealers, internet sites, and used property locations, are sources of factual estimates.

3. Neighborhood Canvasses
   a. A Neighborhood Canvass is essential and not always accomplished prior to the investigator being assigned the case.
   b. In that event, the investigator assigned will see that a neighborhood canvass is conducted when appropriate.

4. Evidence Handling
   a. Requests for Criminalistics Laboratory evaluation of evidence shall be the responsibility of the investigator handling the case.
   b. Fingerprint evaluation is routinely done directly from the Patrol Division, but comparison information is the responsibility of the investigator.
   c. All property obtained in an assigned case will be disposed of as prescribed by policy by the assigned investigator.
   d. When any question arises regarding the release of property in a case referred to the court for prosecution, the investigator should be guided by the decision of the Deputy District Attorney handling the matter.
   e. Teletypes and CLETS entries will be entered as soon after receipt of a
case as is possible.

- Property not placed in CLETS immediately may be run by another agency and released back to a suspect because of a delay in entering it into the system.

- Arrest and M.O. information should be placed on Area II teletypes/Critical Reach fliers, to provide information for the receiving agencies.

- CLETS printouts or teletypes must be submitted on a supplemental form, via Tiburon.

5. Release of Information

a. Information on current, pending or closed cases will not be discussed at any time with unauthorized persons.

b. The Division Commander or designee will determine who and when persons under his command may conduct media interviews.

c. No spontaneous release of information shall be permitted without prior authorization of the Division Assistant Commander or designee.

C. Unit Supervisor Responsibilities

1. Unit Supervisors will be responsible for obtaining the case list from CAD/RMS daily. Unit Supervisors will review the cases on a daily basis, with emphasis being placed on assigning “in-custody” cases.

2. Upon the case being assigned to an investigator, the Unit Supervisor will enter the case assignment into CAD/RMS.

3. The Unit Supervisor will document the case assignments on the unit’s case management log. The case will then be tracked by the Unit Supervisor until it is closed.

4. Supervisors will ensure that an entry note is made in the case management system if there has not been an update within 60 days. The exception will be the Special Investigations Unit, which will be 90 days. Notes will also be made in CAD/RMS if there is ANY activity involving the case (i.e. supplement, interviews).
I. POLICY

A. Detectives will remain alert to gathering information from witnesses, suspects, or arrestees which will help in the solution of crime.

B. Detectives will interview, interrogate or otherwise question persons in accordance with the law and established policies and procedures.

II. GENERAL INFORMATION

A. Interviews and Interrogations

1. Interviews: The process by which a Detective seeks, obtains, and evaluates information given to him/her by persons having personal knowledge of the events or circumstances of a crime.

   a. An interview is conducted in order to collect any facts relating to an incident, to substantiate information obtained from other sources, or to provide additional information pertaining to the incident under investigation.

2. Interrogations: The process by which a Detective obtains information from an individual who is a suspect of the incident under investigation.

   a. An interrogation is conducted in order to establish the extent of involvement of a particular person suspected of committing a crime and/or to obtain information from individuals who have knowledge of the incident under investigation.

3. The determining factor between an interview or interrogation is based on the subjects direct involvement.

4. Interviews should be conducted as soon as possible after the incident.

5. Physical comfort and emotional condition are two primary factors to consider.
when interviewing a subject:

6. Location of interview
   a. A proper setting is most important, as it enables the Detective to better control the interview.
   b. The ideal location for an interview or the most important factor to consider is privacy.

B. Legal restrictions and Miranda
   1. When a subject has not been arrested or their freedom restricted, the Detective may ask whatever questions are necessary and pertinent to the investigation.
   2. The key in this circumstance is custody - where there is “no custody,” the law places no restrictions on questioning.
   3. When a suspect is in custody, a Miranda admonishment must be given and a knowing waiver obtained prior to questioning.
      a. A suspect is considered in custody when they have been deprived of their freedom, must be aware of their lack of freedom or reasonably believe that a lack of freedom exists.

C. Waiver of Constitutional Rights
   1. Before statements made by suspects become admissible in court, the prosecution must offer evidence to prove that suspects were not only advised of their rights, but also that they understood the advisement and, having been so advised, knowingly and intelligently waived those rights.
   2. To secure a waiver, the following question may be asked:
      a. Do you understand each of these rights I have explained to you?
   3. An affirmative reply will be obtained from suspects before questioning begins.
      a. Circumstances which establish an “affirmative reply” include, but are not limited to, the following:
         • Formal waiver:
            • When suspects state orally and unequivocally that they understand their rights and wish to talk.
         • Waiver followed by statement:
• An acknowledgment by a suspect that such suspect understands, followed closely by a statement, is held to be a waiver.

• Non-verbal waivers:
  • Nods and shrugs may be insufficient.
    Deputies should strive for a verbal response. Gestures are subject to different interpretations and leave too much room for interpretation. In these circumstances clarification should be sought.

• Written waivers:
  • The signing of a written waiver is a good waiver if the suspect is literate.

• Request to talk to attorney later:
  • A desire to talk to an attorney in the future, while manifesting a willingness to answer questions now without counsel, is a waiver.

  b. If suspect indicates a desire to remain silent and/or see a lawyer before answering questions, the interrogation will cease.

  c. Deputies may question a suspect who originally refused to “waive” whenever the suspect initiates a request to talk.

  • Deputies will re-advice such suspects of their Constitutional Rights and obtain a waiver before questioning.

III. PROCEDURE
5. Conversations between a suspect and their attorney are privileged and do not have to be revealed by either party.
   
a. Penal Code Section 636 makes it a felony to eavesdrop or record any privileged conversation.

b. It is the responsibility of the investigator to ensure that all video or audio recordings are legally proper.

c. It is the responsibility of each investigator using recording equipment to ensure that no recording is made in violation of 636 P.C.

d. If an interview is conducted by an investigating officer with the suspect and their attorney, the investigator must ensure that whenever he or she leaves the interview room and if a privileged communication situation is created, all video and audio equipment must be turned off immediately.

B. Prisoner Control and Officer Safety

1. Prisoners in custody within the Field Operations Building shall be:
Contra Costa County
Office of the Sheriff

Investigation Division Policy and Procedure

INVESTIGATION NUMBER: 3.03.03

RELATED ORDERS:

ISSUE DATE: 05-01-07
REVISION DATE: 06-01-17
CLEARANCE: CCCSO

CHAPTER: Operations
SUBJECT: Search Warrants

I. POLICY

A. Investigation Division personnel will be familiar with preparing, presenting and obtaining search warrants.

II. PROCEDURE

A. Obtaining a Search Warrant

1. During court hours, the investigator shall:
   
a. Compile all necessary reports, documents, and supportive paperwork, along with the affidavit in support of issuance of a Search Warrant and affiant’s expert opinion into the affidavit for search warrant package, making sure the preprinted affidavit face sheets are attached and properly completed.

   b. Prepare the search warrant package to be signed, making sure all necessary areas are complete and that all pages have been numbered.

   c. Take the completed search warrant package to a Superior Court Judge for signature.

2. After court hours, the investigator shall:

   a. Compile all necessary reports, documents, and supportive paperwork, along with the Affidavit in Support of Issuance of a Search Warrant and the Affiant’s Expertise into the affidavit for the search warrant package, making sure the preprinted affidavit face sheets are attached and properly completed.

   b. Prepare the search warrant package to be signed, making sure all necessary areas are completed and all pages are numbered.
c. Deliver the completed affidavit, along with the original search warrant package, to the on-call Judge for approval and signature.

d. When the situation dictates for the immediate exigency for a search warrant, a telephonic search warrant is a viable option.
   - Detectives are encouraged to utilize any and all resources available to them, particularly those skills learned from recommended search warrant preparation courses.

B. Serving the Search Warrant

1. The investigator shall:

2. Execute the search warrant within ten (10) days of issuance, pursuant to section 1534 of the Penal Code.

3. Comply with the knock and notice requirements pursuant to Penal Code Section 844.

4. Verbally advise the occupant(s) of the building to be searched of the contents of the search warrants.

5. Leave a copy of the search warrant at the location, or with the occupant, along with a signed inventory list of the property taken from the premises.
   - If the details of the search warrant will jeopardize the safety of other search warrants, a redacted copy may be left at the location.

C. Search Warrant Return

1. Pursuant to Section 1534 of the Penal Code, a warrant shall be executed and returned within ten (10) days of issuance.
   - Electronic Devices may take longer due to processing time.

2. The investigator shall:
   - Take the original search warrant, the return of search warrant and the recovered property list to the issuing Judge, whenever possible.
   - If the originating Judge is not available, obtain the signature of another Superior Court Judge and then file with Clerk’s Office with original search warrant.
   - Upon the issuance of a Search Warrant number by the clerk’s office, the search warrant number will be documented in a supplemental report.
I. POLICY

A. Investigation Division personnel will be familiar with the process involved in preparing and obtaining arrest warrants.

II. GENERAL INFORMATION

A. Arrest Warrants vs. Ramey Warrants

1. Arrest warrants are complaints based on probable cause and presented to the District Attorney’s Office, which result in the issuance of an arrest warrant.

2. Ramey warrants are based on probable cause and presented to a Superior Court Judge.
   a. Ramey warrants are utilized for exigent circumstances and for the immediate arrest of suspect(s), prior to formal charges by the District Attorney’s office.

III. PROCEDURE

A. Obtaining an Arrest Warrant

1. Investigations personnel attempting to obtain an arrest warrant will:
   a. Compile all necessary reports, documents, and supportive paperwork, along with the Affidavit in support of an Arrest Warrant.
   b. Make an appointment with the District Attorney’s Office and the appropriate Filing Deputy.

   • The completed Arrest Warrant Package will be sent to the Superior Court for the authorization of the Arrest Warrant.
c. The Detective may elect, depending on exigency of the case, to take the completed Arrest Warrant package to a Superior Court Judge and seek authorization at that time for the Arrest Warrant.

B. Service of the Arrest Warrant

1. The warrant may be served by the Detective.

2. The warrant may be placed into the CLETS Systems and served by any Peace Officer.

3. The warrant may be served in conjunction with a search warrant.
Contra Costa County
Office of the Sheriff

Investigation Division Policy and Procedure

INVESTIGATION NUMBER: 3.03.05

RELATED ORDERS:

CCCSO

ISSUE DATE: 05-01-07
REVISION DATE: 12-11-19

CLEARANCE:

CCCSO

CHAPTER: Operations

SUBJECT: Ramey Warrants

I. POLICY

A. Investigation Division personnel will be familiar with the process in obtaining a Ramey Warrant.

II. GENERAL INFORMATION

A. Ramey Warrants are arrest warrants based on probable cause.
   1. They can be issued at any time, day or night
   2. They can be entered in the N.C.I.C. System under an agency case number.
   3. The use of a Ramey Warrant is presumed lawful.

B. Ramey Warrants must be prepared in writing for each defendant
   a. A probable cause declaration in support of arrest warrant ("Ramey" warrant) must be completed and signed by investigators, along with attachments to establish probable cause.
      - Oral affidavits may be used.
      - Telephonic affidavits may be used.
      - Existing crime reports may be used.
      - A written statement may be used.
      - A combination of all of the above may be used.
   2. Once signed by the Judge, the Ramey Warrant can be served immediately.
      a. It does not initiate a criminal proceeding.
      b. It does not have to be recorded with the court before the arrest.
c. It is the responsibility of the Investigator to submit the signed Ramey Warrant to the Records/Warrant Unit for entry into CLETS/NCIC.

C. Search warrants and Ramey warrants may be obtained at the same time.
   1. The search warrant affidavit should establish probable cause to both search and arrest

D. A certificate of service must be completed by the arresting officer after arrest on a Ramey Warrant and filed with Records and the Court.
   1. Once a suspect is in custody on the Ramey Warrant, filing time limits are the same as for on view arrests.

E. If a Ramey warrant is not served immediately it should be forwarded to the Records Unit where they will enter it into CLETS.
   1. If after-hours the case file number may be used on the warrant, but a warrant number should be obtained via the court as soon as possible.
I. POLICY

A. It is the policy of the Investigation Division that the obtaining and service of search warrants and arrest warrants shall be done in a professional manner, with adherence to legal procedures and requirements.

II. PROCEDURE

A. Service of Search Warrants and Arrest Warrants

1. An Operational Plan is required for all search or arrest warrant service, undercover operations and Parole/Probation searches.

2. The Unit Supervisor shall, except under exigent circumstances, ensure that an operation plan is completed and distributed to all participating personnel.

   • The unit supervisor will also ensure that Dispatch is advised.

   b. Prior to the operation, the operational plan will be reviewed and approved by the Unit Supervisor.

      • Prior approval by the Investigation Division Assistant Commander will be obtained when discretion allows.

   c. Prior to the operation, the case agent will ensure that the location has been physically verified. This will include visiting the location, taking photos and noting the physical address.

      • If it is not operationally or logistically feasible to do this, the Unit Supervisor must be made aware of the circumstances prior to service.

   d. The Unit Supervisor shall be on-scene at the service of all search warrants and approve forced entry.
e. A signed copy of the search/arrest/Ramey warrant will be attached to the operations plan.

f. The operational plan will be filled out in its entirety prior to the operation.
   - This is to include being signed off by a supervisor.

g. All operations orders will be kept on file for 1 year in the Division Assistant Commander’s Office for future reference.

h. Whenever possible and appropriate, a uniformed officer from the local jurisdiction should be present during the arrest/search warrant operation for liaison purposes.

i. All Search and Arrest warrant services will be documented in a crime report, either as a supplement from the original crime being investigated, or an original report.

C. Debriefing

1. At the conclusion of the field enforcement operation, such as an undercover buy, a surveillance operation or the execution of an arrest or search warrant, a debriefing will be conducted.

2. All personnel who participated in the operation should be present during the debriefing.

D. Dress and Identification

1. Investigations personnel effecting arrests, serving arrest or search warrants shall wear ballistic body armor, raid jackets and ballistic helmets during the initial stage of the enforcement action (building entry, etc.), unless prior supervisory permission has been obtained. This attire will clearly identify participates as Sheriff’s Office employees.

2. Once the enforcement area has been secured, Investigation personnel may remove their body armor and ballistic helmets; however, a raid jacket, or other suitable clothing with identification, must be worn to clearly identify the individuals as Sheriff’s Office personnel.
F. Local Agency Notification

1. It is Departmental policy that local law enforcement agencies be notified when Sheriff’s Office personnel are conducting operations within their perspective jurisdictions.

2. The notification shall be made by the Unit Supervisor or their designee prior to the planned event.
I. POLICY

A. It is the responsibility of the Investigation Division to provide investigative support to all Divisions, when requested, for the response to serious criminal incidents occurring outside normal business hours. It will be the responsibility of the Division Assistant Commander (or designee) to generate and maintain a current call-out schedule.

II. PROCEDURE

A. Call Out Procedures

1. In all cases involving homicides, or potential homicides (victim not expected to survive), the on-call detective and sergeant will be called and will respond to the request (homicide call out). If the on-call sergeant is not also the Homicide sergeant, the Homicide sergeant will be notified as well.

2. In those cases involving child abductions, the on-call sergeant and detective will be notified, and it will be his/her responsibility to notify the Supervisor of the Special Victims Unit. All available detectives will respond on all child abductions.

3. In those cases, as a result of a criminal act, where a serious injury has occurred, and the victim is hospitalized, but expected to survive, the on-call sergeant and detective will be notified. It will be the Officer of the Day’s (OD) decision, in consultation with the on-call sergeant, whether or not investigators will respond.

4. In those cases involving take-over robbery, home invasions, etc., the on-call detective will be notified. It will be the OD’s decision, in consultation with the on-call sergeant, whether or not investigators will respond.

a. This will also include those situations where victims are bound or taken hostage.
5. The on-call sergeant or detective will be notified whenever the incident has the likelihood of generating extraordinary media interest.

   a. The on-call sergeant or detective will notify the Assistant Division Commander or Division Commander as soon as possible.

   b. At the discretion of the OD, a detective or sergeant from the Investigation Division will respond to the scene within a reasonable amount of time and without undue delay.
I. POLICY

A. Investigation Division personnel will ensure that all felony cases for filing are complete and delivered to the Contra Costa District Attorney’s Office in a timely manner.

II. PROCEDURE

A. Felony Case Filing Package

1. Felony cases for complaint and felony arrest packages will be complete prior to making an appointment with the District Attorney Filing Deputy.

   a. All efforts will be made to file an in-custody case when possible.

2. The following information will be included and required for the filing packet:

   a. D.A. Request for Prosecution form
   b. Defendant Information Sheet - One per defendant
   c. Criminal History and/or D.M.V. Information, if no criminal history exists
   d. Booking Fee Form
   e. Witness Roster – include Forensic Services Division personnel involved in the case
   f. Bail Sheet - One per defendant
   g. Correct number of reports per defendant - Copy of all Lab reports - All supplemental reports
   h. Search Warrant copy, if applicable - including Search Warrant # and Affidavit
i. Any and all Laboratory reports, including chemical analysis, fingerprint reports and Crime Lab photos and reports

definitions:

j. All documents and information requested in the Contra Costa District Attorney’s Office Felony Filing Protocol, appendix 1.

B. In Custody Felony Filings

1. For subjects that are in-custody, the above-listed procedures must be followed, as well as the following additional steps:

a. Contact the D.A. Filing Deputy and advise him/her of the in-custody filing and make an appointment.

b. The case must be filed within 48 hours of a juvenile subject’s arrest, or 72 hours of an adult subject’s arrest.

c. Notify the jail of the impending in-custody filing to assure the subject is not released.
   - After acquiring the court docket number, immediately contact the Detention Facility with the docket information, so the subject will be transported to the proper court.
   - The jail must be notified by 11 a.m. on the last day of the 72-hour arrest.

d. After the D.A. Filing Deputy reviews and approves the case, file the case with the appropriate court clerk where the defendant is to appear.
I. POLICY

A. All members of the Investigation Division have a responsibility to identify individuals responsible for criminal acts.

B. Such identifications will be accomplished in a manner which ensures due process of the law, eliminates suggestiveness, and documents the process for use in court prosecution.

II. PROCEDURE

A. Identifications

1. Integrity of Identification

   a. Officers conducting an identification process will do so in a manner which ensures that individual witnesses are not influenced by any other witnesses or incident. The following guidelines should be employed whenever applicable:

      - Each witness will view the suspect out of the presence of other witnesses;

      - Witnesses will not be allowed to discuss their observations with other persons who are to participate in a future identification process.

2. Maintenance of Neutrality

   a. When presenting a suspect to an eyewitness for identification, officers will remain as neutral as possible, consistent with the continued secure custody of the suspect.

   b. Officers will not suggest the correct identity of the suspect or make any suggestion, either verbal, through gesturing, or any other means which would influence a witness to identify a particular suspect.
3. Recording Circumstances
   a. The Officer will record the following circumstances when conducting an identification:
      - Time and location
      - Persons present
      - How conducted
      - Duration
      - Statements of witnesses attempting the identification
      - Other circumstances which may assist in determining the validity of the identification

4. Dying Declarations
   a. A dying declaration has been deemed reliable and is an exception to the Hearsay Rule.
   b. A dying declaration is based on the belief that a person is about to die and that he/she doesn’t lie about the cause of his/her predicament.

5. Field Identification
   a. A field identification occurs whenever an officer arranges for a witness to view a suspect in the field.
   b. Prior to conducting a field identification, the investigating officer will ensure that the following elements are present:
      - Time and Location
         - The identification takes place in the field and in a reasonable amount of time after the incident.
      - Witness Description
         - The witness has described as completely as possible the appearance and clothing of the perpetrator.
      - Justification
         - The person to be viewed reasonably matches the witnesses description and/or the circumstances
surrounding the presence of such a person in the area is such that a field identification process is justified. Such justification is based on “reasonable suspicion.”

- The following additional procedures will also be adhered to:
  - Probable Cause
    
    If probable cause to arrest is present, the suspect should be taken into full custody prior to conducting a field identification.
    
    If probable cause to arrest is not present, but the officer has a “reasonable suspicion” that the person may be the perpetrator, then a temporary detention is justified.
    
    The identification process will be conducted at the scene of the temporary detention, unless circumstances dictate otherwise.

  - Duration
    
    The duration of the temporary detention will be in conformance with provisions of this Manual, which, under normal conditions, limits such detentions to a reasonable amount of time.

  - Method of Identification
    
    The witness must be afforded an ample opportunity to view the suspect.
    
    This means that the suspect should be removed from a police car or the place of custody, prior to viewing, but only in a way that assures no physical evidence is contaminated, and there is no danger to suspect or witness.
    
    The suspect may be asked to utter certain words, make certain gestures, or assume particular poses that the witness might recognize.

  - Right to Lawyer
    
    No person has a right to have a lawyer present at any field identification procedure.

  c. Field identifications will not be conducted at any custodial or police...
Photographic Identifications

A photographic identification occurs whenever an officer arranges for a witness to view a series of photographs, sketches, or composites in an attempt to identify the perpetrator of a criminal act.

A photographic identification may be conducted whenever one of the following circumstances is present:

- The nature of the offense, and/or investigative circumstances, indicate that a formal line-up is not appropriate.
- There is no known suspect, but the officer has a description which is similar to the photograph being shown.
- The unusual physical appearance of the suspect causes a lack of suitable person to use in a formal line-up.

When a decision is made to conduct a photographic identification process, the following procedures will be adhered to:

- Sketches and Compositions
  
  Sketches or compositions may be used whenever there is no photograph of the suspect available.

- Required Number
  
  When conducting a photographic identification, at least six photos, or facsimiles, will be used.
  
  The pictures will be arranged and displayed in a manner which does not attract undue attention to any one picture in the series.

- Right to Lawyer
  
  No person has a right to have a lawyer present at any photographic identification procedure.

- Procedure After Positive Identification
  
  When a positive photographic identification is made, the officer conducting the identification
process will preserve the photographic display, as viewed by the witness, for presentation in court at a later time.

Such preservation will be accomplished by booking the display into evidence in accordance with established procedures.

d. Formal Identification Procedures

- A formal identification (line-up) occurs whenever a suspect is placed in a live group of individuals, and then the entire group is presented to witnesses for viewing.

- Formal identification procedures will be conducted as soon after the criminal act as is possible.

- Formal identification line-ups will be conducted at the Martinez Detention Facility. Proper notification and coordination will occur between the Investigations Division and Custody staff prior to the line-up.
I. POLICY

A. Unusual incidents are cases which do not fall into the normal course of the Investigation Division operations.

B. Predetermined incidents may come under the jurisdiction of the Federal Government or Military.

   1. Assigned investigators will very likely conduct a parallel investigation if Federal, State or Military Agencies become involved.

   2. These cases can become long in duration and are conducted by more than one investigator.

II. PROCEDURE

A. Unusual Incident Investigations

   1. Cases of this nature will be reviewed by the Investigation Division Commander and assigned to those investigators who are qualified and trained in that particular field of expertise.

   2. The investigator assigned to the case will maintain proper written reports and supplements.

   3. The lead investigator will be responsible for maintaining an active and a positive liaison with the outside agencies involved in the case.

   4. The lead investigator will report on the status of the case in a timely manner to their Unit Supervisor or Division Commander.

I. POLICY

A. It is the responsibility of the Vice detective to review all applications for a One-Day liquor license in the unincorporated areas of the county.

II. PROCEDURE

A. The Vice Unit (Vice) will review and recommend approval or denial of a One-Day liquor license application to the California Department of Alcohol Beverage Control and the applicant.

1. The final decision to issue a One-Day liquor license will be made by the California Department of Alcohol Beverage Control.

B. All requests for issuance of the One-Day liquor license shall be in writing and submitted to the Vice Unit at least 30 days prior to the scheduled event.

C. Only applicants that qualify as a caterer and/or a non-profit organization, including a charitable, civic, cultural religious, fraternal, patriotic, political, social amateur sports organization for the following purposes, may apply. This permit allows the following:

1. Sales to members of the organization at the site of and during an organized picnic, social gathering, or similar function of the organization: OR

2. Sales to the general public from the premises temporarily occupied at the site of and during a county fair, civic celebration or similar event, or at a designated premise and during fund raising events sponsored by a non-profit charitable organization as set forth by the State of California.

D. The written request should include the following:

1. Name of the organization
2. Location of scheduled event
3. Type of event planned
4. Date and time event starts and closes
5. Type of alcoholic beverage to be served (beer, wine, or hard liquor)
6. Name, address, and telephone number of a contact person

E. The request should be made to:

Contra Costa County Office of the Sheriff
Vice Unit
1980 Muir Road
Martinez, Ca. 94553

F. The Special Investigations Unit will consider safety, security, size of the event, and logistical impact on the community and the Office of the Sheriff when determining approval.

G. Upon receipt of the written request for the One-Day liquor license, the Vice detective will check the records of the Organization and/or the location for any information that would preclude the issuance of the recommendation.

H. The Vice detective will conduct random on-site inspections of those hosting the event.

I. The Vice detective will prepare the approval letter which will be signed by the Investigations Division Commander or Field Operations Bureau Assistant Sheriff. This will be forwarded to the requesting party.

1. The requesting party must present this letter to the Alcohol Beverage Control Office for the issuance of the One-Day liquor license.
   a. ***ABC accepts the original letter only***

2. A copy of the approval letter will be forwarded to the area Station House Commander where the event will occur.

J. When the Vice detective recommends denial for the issuance of a One-Day liquor license, the following will be completed:

1. Vice detective will prepare and forward a recommendation of denial letter to the applicant within 3 business days of the recommendation.

2. A copy of the denial letter will be forwarded to the Investigation Division Commander for review.

K. Appeal Process

1. If denied, the applicant may appeal the decision.

2. Upon receipt of the recommendation for denial letter, the applicant may appeal the decision in writing.

3. Once the Investigation Division Commander receives the appeal, he/she will:
   a. Investigate the reason for denial.
b. Uphold the decision or will instruct the Special Investigation Unit to issue an approval letter.

c. Issue a final decision of recommendation **within 5 business days** from receipt of the appeal.

d. Forward the results to the applicant either by writing (time permitting) or by telephone contact.

4. The written appeal should be made to:

Contra Costa County Office of the Sheriff
Investigation Division Commander
1980 Muir Road
Martinez, Ca. 94553

I. POLICY

A. The final disposition of all property taken as evidence or for investigation is the responsibility of the assigned investigator.

B. This applies to recovered items belonging to victims, clothing and personal items taken as evidence and motor vehicles impounded or stored.

C. Any Sheriff’s Office Policies and Procedures Manual sections that apply shall be adhered to in conjunction with this section.

II. PROCEDURE

A. Property Release and Destruction

1. Property Room personnel are responsible for the physical release of property.

2. Property that was presented in court will be released only at the direction of the court or District Attorney.

3. Authorization for the release of property will be submitted to the Property Room on Evidence and Property Release Form CL-161.

   a. Detectives may release property to the rightful owner(s). The release will be documented in a supplemental report. If the property released was stored at the Property Room, Property Room personnel will be advised.

   b. Any property seized pursuant to a search warrant must have a signed Order from a judge/magistrate authorizing the release or destruction; unless the release to the rightful owner(s) or the destruction of the property was sought and authorized in the original search warrant affidavit.

Appendix 1
Thank you for your continued commitment to the citizens of Contra Costa County. Below is an updated **Felony Filing Protocol** that must be used to file felony cases in Contra Costa County. Please make sure that you include the following in your cases that you bring in for felony filing:

1) **VERIFIED REQUEST FOR PROSECUTION FORM** – please make sure to fill out the entire document because all of the information is essential for prosecution.

2) **SIGNED DISCOVERY CHECKLIST** certifying that all necessary “discovery” is being provided and is included in the filing packet.

3) **RAP SHEETS** for all suspects and victim (DMV and CII). Victim RAP Sheet for (DA Packet only).

4) **ALL REPORTS** PREPARED AS PART OF INVESTIGATION, including but not limited to:
   a. All CAD Logs/Dispatch tapes related to the call for service.
   b. All police reports and supplemental reports written and associated with the case.
   c. Any prior reports involving the suspects that involve related conduct requested by the DDA at filing.
   d. LPO reports for theft cases.
   e. CHP 180 reports and initial reports from agencies entering stolen vehicles into SVS.
   f. Any search warrants associated with the case, excluding any sealed portions.

**COPIES OF REPORTS** must be included in the following format:
   a. A Digital Copy of the packet is very helpful and will speed up the log in process if it can be provided at the time of filing.
   b. Three copies of all reports (or more if there are multiple defendants). Please include all search warrants (excluding sealed portions), lab reports, DPT reports, and all available computer print outs and CAD logs.

5) **SUBPOENA ROSTERS** for all felony requests for prosecution must include the following:
   a. **SUSPECT IDENTIFYING INFORMATION**. All suspects must be listed at the top of each page in the order in which charging is requested.
   b. **DETECTIVE CONTACT INFORMATION**. Please include your detective cell phone number, desk number, and email address on the subpoena roster.
   c. **CIVILIAN WITNESSES**. Please include all involved civilians. Included with the civilians, we need DOB, CDL, CII, FBI, and any other identifiers. **We need complete addresses including zip codes, telephone numbers and email addresses.** For juvenile witnesses, please provide information for the guardian. Please also include an explanation of the need for the witness (what the person did in the case), whether the witness is cooperative (to evaluate whether we need to personally serve), and other important information you deem helpful.
   d. **LAW ENFORCEMENT WITNESSES**. Please include all law enforcement from all involved agencies (first and last names), lab personnel and report numbers that are
relevant. Please detail the relevancy of each witness to the case to help us determine
the necessity of the witness.

b. **BUSINESS RECORDS OR CUSTODIANS.** Please include the custodian of record
witnesses for any documents relied upon. Please make sure to get reliable phone
numbers (i.e. cell phone numbers for these witnesses). Please also include the
account and routing numbers for all of the bank information.

6) **COPIES OF ALL DOCUMENTS AND COLOR PHOTOGRAPHS** of essential evidence
relied upon in the investigation, including but not limited to:

   a. Photocopies of checks, mail, credit cards, receipts, bank statements, phone records,
   and indicia where there is something significant about the document that the
   investigation is hinging upon. Should an agency feel these documents are too
   voluminous, they should call the filer to discuss the issue and determine which, if
   any, copies the filer feels are necessary to view at time of filing.
   b. Color photo lineups with the admonishment and supporting documentation.

7) **ALL MEDIA REFERENCED IN THE REPORT** should be provided, including but not
limited to:

   a. Copies of the media must be provided for all defendants and the prosecution.
   b. CDs of all the photographs collected as part of the case.
   c. Surveillance videos – When this is collected, the custodian of the surveillance must
   be interviewed to determine that the surveillance is in proper working condition and
   the date and time of the video is correct.
   d. Taped statements of any victim, witness, or defendant (even if not the requested
   subject for prosecution but a co-responsible).
   e. All body camera footage that is associated with the case.

8) **VALUATION OF PROPERTY STOLEN OR DAMAGED** must be Complete.

   a. A summary of the loss to a victim must be included, either a receipt, or a bank
   statement with a statement from a custodian at a bank to establish that the loss
   actually occurred, or a valid estimate for the value of the property.
   b. With stolen vehicles, a value of the vehicle must be included in order to establish
   that the vehicle is over $950.
   c. All firearms that are stolen must also include a proper valuation for determination if
   the firearm is worth over $950 (this includes all added components and magazines
   associated with the weapon).

9) **TOTAL RESTITUTION AMOUNT** owing to victims.

   a. Agencies must inquire during investigation about restitution owed to victims of ALL
   crime. The California Constitution guarantees victims restitution on all cases.
   Please make all attempts to inquire and include the amount of loss at the time of the
   initial report, any medical expenses, complete damage evaluations or even total loss
   calculations.

10) **PRESUMPTIVE TEST PAPERWORK** for any drugs that are the predicate for Drug Related
Charges.

11) **MEDICAL RECORDS OF VICTIMS** where they went to the hospital related to a particular case. Please obtain a consent release from the victim and identify the extent of the injuries.

   a. In many cases the records will not be complete at the time of in custody filing. In this circumstance, an oral summary from treating medical personnel can suffice but that witness needs to be identified with specificity and should be included as a witness on the subpoena roster.
   
   b. Please also bring copies of the records to filing if you have them.
Appendix 2
A Sexual Assault Response Team (S.A.R.T.) exam is a forensic medical examination for sexual assault victims. This is done to assist in the investigation of a sexual assault case by collecting physical evidence from the victim.

Basic considerations needed for a S.A.R.T. exam:

- Skin to skin touching
- Any sexual penetration including foreign objects
- Body fluid transfers (ie: saliva)
- Time considerations (see chart below)

The S.A.R.T. exam can last for approximately two to four hours. The exam consists of the following:

- An interview of the incident by nurse and or doctor
- A brief medical history review
- Physical examination
- Photograph of injuries
- Collection of evidence/samples to include:
  - foreign material
  - fluids
  - urine
- blood
- clothing collection
- DNA (buccal swabs)

When collecting evidence it may include the following:

1. A brown paper bag containing victim's clothing (Sexual Assault Evidence Kit Clothing)
2. The Sexual Assault Evidence Kit (envelope)
3. The original S.A.R.T. examination report (Forensic Medical Report) and one additional copy
4. Blood sample for alcohol/drug analysis (envelope)
5. Urine Sample for alcohol/drug analysis (envelope)
6. Liquid Blood Evidence kit (envelope)

All specimens/liquids collected are to be placed in the refrigerator at the Concord Property Evidence. Clothing can be placed into an evidence locker. Each item must have its own evidence card.

The original S.A.R.T. exam report will be placed into evidence. Attach a copy of the S.A.R.T. exam to your report.
Appendix 3
Preface

This Manual is, and shall be, a composite of the current practices, objectives, principles, policies and administrative procedures governing the operation of the Sheriff's Office and the Field Operations Bureau.

This Manual has been designed to provide a clear understanding of the constraints under which members of this Office operate, and the expectations that they are to fulfill.

The policies and procedures listed herein are meant to serve as positive guidelines for actions by members of this Office. They are meant to be “attitude forming,” to set limits of discretion, and to provide a method to achieve an objective. This Office assumes responsibility for official conduct or acts that are directed by, or in compliance with this manual.

This Manual supersedes all previously issued Sheriff’s Office Policy Manuals and procedural memorandums. It does not supersede any applicable State/Federal Laws.

Infractions in policies, and the practice of poor procedures, decrease the public’s confidence in law enforcement and this Office. It is the responsibility of all employees to thoroughly acquaint themselves with this Manual and use it as a guide in the performance of their daily operations. A thorough knowledge, familiarity and application of these policies should lead to individual and organizational success.

Many of the directives contained within this Manual must change as the need for change occurs. It is the responsibility of every member of the Sheriff’s Office to ensure our policies are constantly reviewed and validated or updated.

Suggestions for corrections or additions to this Manual may be submitted to the Patrol Division Commander directly.

John Lowden
Special Operations Commander

## I. POLICY

A. The Patrol and Special Operations Division will provide police service to the community in a professional and caring manner.

B. Administration and management of patrol functions will be accomplished through the Patrol and Special Operations Division Commanders and assigned staff.

## II. GENERAL INFORMATION

### A. PATROL AND SPECIAL OPERATIONS DIVISION ADMINISTRATION:

1. Ensures adherence to Department policies and procedures.
2. Manages the functions assigned to the Patrol and Special Operations Division.
3. Provides for communication between Sheriff-Coroner, Undersheriff, Bureau Commanders, other Division Commanders, and elements within the Division.
4. Maintains Division records to accomplish assigned functions.
5. Maintains temporary personnel records of Division members.
6. Ensures continuation of adequate staffing levels.
7. Maintains Division assignment records.
8. Develops and maintains productivity standards and priorities within the Division to achieve Department goals.
9. Ensures the supervision of clerical staff.
10. Supports Division personnel in achieving personal objectives.

### B. PATROL AND SPECIAL OPERATIONS DIVISION-LINE OPERATIONS:

1. Performs continuous patrol services and operation.
2. Responds to calls for service.
3. Generates and reviews police reports.
5. Apprehends suspects and processes arrests.
6. Investigates and reports vehicle accidents within contract cities.
7. Conducts field training of deputies transferring to patrol.
8. Patrols special events and unusual occurrences.
9. Handles special crime problems occurring in specific areas of the County.
10. Ensures immediate public safety and well-being by assisting citizens as needed.

III. PROCEDURE

A. All Patrol and Special Operations members have a basic responsibility to perform assigned tasks and duties in a manner that ensures the success of the Department, Patrol and Special Operation Division's mission.

B. In addition to this basic responsibility, and other duties set forth in the Department manual, Patrol personnel have the following responsibilities:

1. PATROL COMMANDER/CAPTAIN
   a. Reports directly to the Field Operations Bureau Assistant Sheriff.
   b. Overall command of all Patrol personnel.
   c. Responsible for the administration of major programs, projects, or functions within the Division.
   d. Ensures the enforcement of laws and ordinances.
   e. Formulates special orders, policies and procedures for Patrol Division.
   f. Interprets all Department policies as to effects on the Patrol Division.

2. SPECIAL OPERATIONS COMMANDER/CAPTAIN
   a. Reports directly to the Field Operations Bureau Assistant Sheriff.
   b. Overall command of all Special Operations personnel.
   c. Responsible for the administration of major programs, projects, or functions within the Division.
   d. Ensures the enforcement of laws and ordinances.
   e. Formulates special orders, policies and procedures for the Special Operations Division.
   f. Interprets all Department policies as to effects on the Special Operations Division.

3. ASSISTANT PATROL COMMANDER/LIEUTENANT
   a. Serves as the executive officer of the Patrol Division.
b. Administrative:

- Administers all functions of the Justice Team.
- Assumes command of the Patrol Division in absence of Patrol Commander.
- Enforces rules, regulations, policies and procedures of the Division and Department.
- Prepares personnel scheduling and other assignments as needed.
- Reviews policies, procedures, personnel, equipment, and facilities of the Division to ensure the overall Patrol mission is accomplished.
- Insures proper span of control and unity of command and that the delegation of authority is commensurate with responsibility.
- Responsible for keeping the chain of command informed of all operations and problems.
- Evaluates the selection procedures, training programs, budget proposals, planning and research activities, public relations programs and managerial processes for efficiency and effectiveness.
- Reviews and comments on matters involving disciplinary actions.
- Performs special surveys, studies, and related duties as required.
- Maintains internal and external liaison.
- Updates and maintains field operations policies and procedures.
- Responsible for Administrative Services.
- Responsible for Special Operations.
- Patrol training.
- Color Guard.
- K-9 Program.

c. Operational:

- Confers with station commanders/police service managers relative to coordination of work and assumes command of line operations when necessary.
- Makes frequent inspections of entire Division to observe, note, recommend change, suggest compliance and control operations.
- Ensures that line and divisional staff functions are being discharged effectively.
- Advises and assists subordinates in proper disposition of complex or difficult assignments or situations.
- Ensures the enforcement of laws and ordinances.

4. STATION COMMANDER/POLICE SERVICE MANAGERS
   a. Administrative:
      - Responsible for the command of a Station House or a Contract City Police Department.
      - Plans, assigns, reviews and supervises the work of personnel assigned.
      - Ensures the development and implementation of assigned programs or functions.
      - Reviews activity sheets to keep informed on relative efficiency and accomplishments of his command.
      - Delegates administrative duties to others when necessary, monitoring and controlling the levels of performance.
      - Investigates and/or reviews all complaints relative to services of personnel under their command.
      - Contacts other divisions as necessary in order to insure the proper coordination of activities with Patrol Division.
      - Enforces rules, regulations, policies and procedures of the Division and Department.
      - Reviews policies and procedures of the Patrol Division and recommends changes.
      - Recommends personnel for appointment, commendation, discipline, transfer and dismissal.
      - Inspects operations, personnel, equipment and facilities.
      - Ensures regular training sessions are conducted during roll call briefing, providing information best suited to the needs of their watch.
      - Maintains liaison with allied law enforcement agencies.
      - Prepares budget estimates as directed.
      - Evaluates all major crimes and reports all unusual situations and emergencies to their supervisors.
      - Receives and corrects reports from their subordinates, putting critical emphasis upon completeness and accuracy. Supervisors shall be equally critical regarding
the proper documentation of elements of the crime and all arrests.

- Ensures that proper station and field operations are being discharged effectively.
- Assigns subordinates in such a manner as to accomplish the overall police task.
- Confers with other supervisors relative to coordination of work.
- Ensures all members of their command are kept informed of changes, new laws, etc. via the briefing format.
- Advises and assists subordinates in the proper disposition of complex or difficult assignments or situations.
- Remains available by telephone or radio to all members of their command and shall monitor their activities by these methods.
- Keeps informed and familiar with all police matters occurring since last tour of duty.
- Aids, encourages, instructs, and sets a proper example for all members of their command.
- Ensures proper enforcement of laws and ordinances.
- Reviews operating and performance records and reports.
- Prepares plans of operation relative to the Patrol mission.
- Ensures equipment rooms are maintained and operated in accordance with procedures.
- Ensures uniform and grooming inspections are conducted on a weekly basis by sergeants.
- Duties peculiar to individual Station Houses.

b. Bay Station

- Administers Resident Deputy Program in Bay Station operational area. Current Resident Deputy positions include:
  - Crockett (1.5) – 1 Full Time, 1 part time (6 months)
  - North Richmond (4)
  - Rodeo – Contra Costa Housing Authority (2)
  - Parking/Abandoned Vehicle Enforcement in Bay Station operational area

c. Muir Station
• Administers Resident Deputy Program in Muir Station operational area. Current Resident Deputy positions include:
  • Pacheco Resident Deputy (1)
  • Bay Point Resident Deputy (2)
  • Bay Point School Resource Officer (1)
  • Administers Parking Enforcement in Muir Station operational area
  • Department Funeral Coordinator

d. Valley Station
  • Administers following Police Service Districts
  • P-2A, Blackhawk, during Blackhawk Chiefs Absence
  • P-2B, Alamo
  • P-5, Roundhill Country Club
  • Diablo Services District
  • Administers Resident Deputy Program in Valley Station operational area. Current positions include:
  • Contra Costa Centre (1)
  • Parking/Abandoned Vehicle Enforcement in Valley Station operational area

e. Delta Station
  • Administers Resident Deputy program in Delta Station operational area. Current positions include:
  • Discovery Bay (2)
  • Parking/Abandoned Vehicle Enforcement in Delta Station operational area

f. Marine Services / Air Support
  • STARR Helicopter Program
  • Marine Patrol

g. Danville Police Department
  • Administers law enforcement service for Town of Danville.

h. Lafayette Police Department
  • Administers law enforcement service for City of Lafayette

i. Orinda Police Department
  • Administers law enforcement service for City of Orinda
j. A.C. Transit
   • Administer law enforcement service for A.C. Transit in West Contra Costa County

k. Blackhawk Police Services
   • Administers law enforcement service in Blackhawk P2A

5. PATROL AND SPECIAL OPERATIONS SERGEANT/SUPERVISOR
   a. Administrative:
      • Represents the interest and well-being of non-management personnel to higher authority and transmits management concerns and directives to non-management personnel.
      • Attempt to create and maintain high morale and cooperation among subordinates.
      • Ensures that all Patrol/Special Operations and Department policies and procedures are adhered to.
      • Conducts investigations regarding violations and/or non-conformance of policies and procedures to include written reprimands for remedial purposes and recommendations of discipline.
      • Resolves, or if required, submits to higher authority for resolution conflict problems or disciplinary matters arising from assigned personnel.
      • Ensures that complaints about personnel or services are promptly investigated and reported to the Station Commander.
      • Constantly evaluates the work of assigned deputies and makes written and/or oral evaluations as required.
      • Informs management of outstanding performances of any deputy and gives verbal commendations and/or initiates requests for written commendations from higher authority.
      • Submits to higher authority suggestions from subordinates that enhance Division or Department operations, programs or functions.
      • May relieve a deputy from duty if he/she appears to be physically or emotionally unfit for duty.
      • Inspects the uniform and equipment of each deputy a minimum of once each week and ensures that discrepancies are corrected.

b. Operational:
• Supervises all beat deputies assigned to his/her area of responsibility.
• Conducts briefings, insuring that subordinates receive all available information required for the effective operation of the watch.
• Responds to major incidents and supervises the activities as needed to insure a thorough preliminary investigation and/or proper conclusion.
• Reports all unusual and/or emergency situations immediately to the Station House Commander or Watch Commander.
• Contacts each beat deputy as often as possible to ascertain if such deputy has questions or problems.
• Provides extra attention to any deputy assigned to a beat in which unusually large number of enforcement problems exist and aids and instructs such deputy in combating such situations.
• Instructs subordinates on any special assignment and ensures completion.
• Reviews and approves all reports of deputies in his/her area of responsibility.
• Supervises or participates in the enforcement of laws and ordinances.
• Assumes the position of watch commander when directed by higher authority.
• May be required to perform duties of a beat deputy whenever necessary and shall perform related duties when so assigned.
• Advises relieving sergeant of any information that will ensure continuity of effective operation of the Division.
• Reviews and approves all arrests by Patrol Deputies in his/her area of responsibility to ensure proper procedures have been followed and that the requirements of law have been met.

6. SPECIAL UNIT SERGEANTS
   a. Within the Patrol Division, Patrol sergeants assume the task of commanding special units. In addition to the duties of a Patrol sergeant, those sergeants commanding special units are responsible for the following:
   b. Additional training, maintenance and budgetary requirements pertaining to their unit.
c. Responsible for the evaluation of assigned personnel as to the specialized skills required for their unit.

7. PATROL ADMINISTRATIVE SERGEANT
   a. Miscellaneous duties, required to ensure efficient operation of the Division, will be the responsibility of the Patrol Administrative Sergeant.
   b. Perform other tasks as directed by competent authority.
   c. Supervise "Temporary Student Workers" (Parking Enforcement).
   d. Overall responsibility for Division Training.
   e. FTO Program Coordinator.
   f. Liaison with Property Room concerning destruction/returning property.

8. PATROL AND SPECIAL OPERATIONS DEPUTIES
   a. A Patrol/Special Operations deputy has the greatest influence over the achievement of the Patrol and Special Operations Division and Department mission. Success or failure of the mission is directly dependent upon the deputy's professional conduct, knowledge and sense of duty.
   b. Enforces laws and ordinances.
   c. Responds to calls for service and investigates complaints of disorder or criminal conduct.
   d. Maintains thorough knowledge of policies and procedures.
   e. Makes arrests of persons who have violated laws and ordinances.
   f. Reports all criminal activity assigned or observed to higher authority for proper disposition in the criminal justice system. Collects and preserves evidence pertaining to criminal activity for presentation to appropriate prosecuting authorities.
   g. Protects life and property.
   h. Participates in the prosecution of law violators by appearing in court to testify to situations observed and actions taken.
   i. Investigates conditions hazardous to life or property and takes appropriate actions to remedy the conditions.
   j. Maintains a thorough knowledge of assigned beat areas.
   k. Performs other tasks serving the public interest and well-being.
   l. Ensures the continual enhancement of the Patrol and Department image by displaying professional conduct at all times.
   m. Evaluates performance of Reserve Deputies under their supervision.
   n. Performs other tasks as directed by supervisors.
9. PATROL AND SPECIAL OPERATIONS DIVISION CIVILIAN PERSONNEL

a. Patrol and Special Operations members who are civilian personnel perform duties and tasks, which support Division and Department goals and objectives. Civilian personnel perform the following duties and/or functions:

b. Order and maintain an inventory of necessary supplies.

c. Perform other tasks as assigned to accomplish Division mission.
I. POLICY
   A. Patrol and Special Operations Division will strive to provide the highest level of service possible by using all available resources.
   B. Multiple calls for services handled simultaneously require established priorities.
      1. Patrol Division will apply such priorities on the basis of
         a. Threat to human life and property.
         b. Probability of apprehension.
         c. The nature of the offense involved.
         d. The nature of the service required.

II. PROCEDURE
   A. DEPLOYMENT-GENERAL PROVISIONS
      1. The Department's responsibility to provide the public with the highest attainable standard of law enforcement, and the mission of the Patrol Division, will be the primary factors in the assignment and deployment of its members.
      2. The total resources of the Patrol Division must be deployed in accordance with the demonstrated need for patrol and specialized police services.
   B. DEPLOYMENT OF PERSONNEL
      1. The Patrol Division services are varied in character and must be rendered at all hours in many locations.
      2. Members will be assigned to tours of duty for watches and at places where their services will be of maximum benefit to the community.
   C. RESPONSE PRIORITIES
      1. The nature of many police tasks requires the Patrol Division to be prepared for any contingency.
2. Patrol members will attempt an appropriate response with sufficient resources to establish control, regardless of the nature of the assignment, or incident.

D. ASSIGNED DEPUTIES RESPONSIBILITY
1. The responding deputy has the responsibility to evaluate the assigned call and determine the appropriate response.

2. The assigned deputy will make contact in person on all incidents.
   a. Making contact by telephone should only be done at the reporting party’s request.
      • Exception: in cases where contacting the reporting party would be impractical, or the reporting party has requested no personal contact.

E. SUPERVISOR’S RESPONSIBILITY
1. Supervisors have a responsibility to remain aware of assignments which affect subordinates.

2. Supervisors will monitor radio traffic, their subordinates workload, and performance.
   a. These factors will be the basis for making his/her decision on deployments, and individual deputy evaluations.

F. DETERMINING MANNER OF RESPONSE
1. To assist Patrol members in determining the appropriate response, the following guidelines are provided:
   a. Code 1 Responses: An assignment that involves no emergency or urgency. The majority of calls will be of this nature.
      • If response will be delayed, the assigned deputy will notify Sheriff’s Dispatch of the delay.
      • Examples of assignments which are "Code 1" or may be delayed are as follows:
         • Taking a report of a prior incident.
         • Public assembly check (P.A.C.) that involves an appearance only.
         • Accidental alarms with contact requested.
      • In any event, Patrol and Special Operations members will not use red lights or siren and will obey all traffic laws, rules of the road, and consider road conditions when responding "Code 1."

   b. Code 2 Responses: An assignment that involves an immediate response.
      • When responding "Code 2," Patrol members will proceed immediately to the location of the call.
• "Code 2" responses are not emergencies, and members will not use red lights or siren to expedite the response.

• Examples of assignments which are "Code 2" are as follows:
  - Criminal in custody of private persons.
  - Crimes or attempted crimes that just occurred and the identity or description of the perpetrator is known.
  - An incident that has potential to endanger the public's safety.

• Patrol and Special Operations members will obey all traffic laws, rules of the road, and consider roadway conditions when responding "Code 2."

c. Code 3 Responses: An assignment that involves an emergency response.

• Red lights and siren will be used when responding "Code 3."

• Patrol and Special Operations members may make a decision to utilize this response method when any of the circumstances listed below are reasonably believed to be present.

• An emergency response does not relieve the driver of a vehicle from the duty to drive with due regard for safety of all persons using the highway.

• Refer to Sheriff's Office Policy 1.06.53 Code Three Vehicle Operation. Use of warning lights and siren, is authorized when:
  - A crime or hazard endangering life exists.
  - The assignment involves a request for emergency assistance by another Patrol member or other peace officer.
  - The incident involves the immediate pursuit of a suspected violator.
  - It is mandatory that Patrol and Special Operations members responding "Code 3" notify Dispatch that such response is being initiated.
  - Dispatch will notify appropriate field supervisor of such "Code 3" response.
  - When responding "Code 3," units may discontinue the use of red lights and siren when close to arrival and respond the remainder of the distance "Code 2" in accordance with traffic laws.
- The exact time to discontinue a "Code 3" response is to be decided by each individual member assigned to respond.
- "Code 3" responses may be terminated at any time by a Field Supervisor, Station Commander, Officer of the Day or other competent supervisor who deems that such response is unnecessary.

G. DETAIL PRIORITY
1. Priority 1: Emergency, no delay permissible. Examples include:
   a. Felonies in progress
   b. Officer’s calls for immediate assistance
   c. Report of potential violence or injury
   d. Any call for service determined by Dispatch to need immediate attention
   e. Traffic accidents with injury or unknown injury
2. Priority 2: Handle as soon as possible, delay permissible, but not desirable. Examples include:
   a. Felony and serious misdemeanor reports on cold circumstances
   b. Most routine reports situations
3. Priority 3: Delay permissible - non-serious details of low priority. Examples include:
   a. Check cases
   b. Stolen bicycles
   c. Cold vandalisms
4. Priority codes should not be confused with operational Codes 1, 2, and 3
   a. A priority 1 is not necessarily a Code 3 detail, even though it may be an emergency.
   b. Code 1 is not necessarily a "do-at-your-convenience," rather; a delay is permissible if it is necessary.

H. INTERVENING INCIDENTS
1. Patrol members in the field may be required to decide whether to continue on an assigned call or handle an in-person complaint or other observed event.
   a. Determination of which to handle will be based upon the degree of urgency and the risk to life and property of the assigned call and the intervening incident.
2. When one or the other cannot be immediately handled, the involved member should request the assistance needed.
I. FILLING-IN-ON CALLS
   1. Deputies should be cognizant of pending calls for service, and when appropriate answer up for available calls to reduce Sheriff’s Office response.
   2. F.T.O.’s should encourage trainees to fill-in on calls for other units, as long as it will not interfere with their own duties and assignments.

J. COORDINATION OF RESPONSE
   1. In the interest of officer safety and effectiveness, an attempt should be made to formulate plans between units when two or more are responding to the same incident.
      a. As an example, responding members may choose the side of a house each will take or they may plan to use different streets to provide greater coverage.
   2. When such plans are made, members involved are obligated to advise each other of:
      a. The plan
      b. Their arrival at the planned location
      c. Any divergence from the agreed-upon plan, when possible.

K. RESPONSE AVAILABILITY
   1. When a unit can decrease response time to a call because it is nearer than a dispatched unit, the closer unit may notify Dispatch of its location and availability to respond.
   2. The dispatcher may then send the closer unit after checking with the area supervisor.

L. RETURN TO SERVICE
   1. Each Patrol member has a responsibility to return to service as soon as possible after completion of an assignment.
   2. Completion of an assignment includes the disposition of an incident and respective reports.
   3. Patrol members will return to service sooner when directed by a supervisor to return to service or when the volume and gravity of activity requires such action.

M. 11-99 POLICY
   1. It shall be the responsibility of the on-duty area supervisor, at his/her discretion, to decide:
      a. What units will respond to 11-99 calls
      b. How many units will respond
      c. How far they will respond
2. In areas that include contract cities, if no City Sergeant is on-duty, the area supervisor will insure that adequate city units remain in the cities to provide emergency service.

   a. When Sergeants are on duty in contract cities, they will determine the 11-99 response from their cities to insure adequate emergency coverage in the cities.
I. POLICY
A. The compiling and proper coding of the daily activities of Patrol members is essential to planning and deployment of personnel.
B. The information submitted is important for achievement of the Department's and the Patrol Division's goals.

II. PROCEDURE
A. SELF-INITIATED ACTIVITIES
   1. Patrol members initiating activities which are not assigned by Dispatch, shall advise Dispatch of the proper codes, disposition, victims name and address as soon as practical after completion of the detail.

B. REPORT DESCRIPTION/DETAIL CODE LISTING
   1. Patrol members assigned details by Dispatch shall be responsible for providing accurate codes for such details as soon as practical after completion of the detail.
   2. The proper code and disposition shall be obtained from the "Report Description/Detail Listing pamphlet".
      a. EXAMPLE: Detail assigned is a residential burglary.
         • The proper codes would be: "459R, disposition RTF".
      b. In the event a detail is assigned as a specific crime, but after gathering all the information, the deputy determines the incident involves a different crime; codes shall be given for the appropriate crime.
         • EXAMPLE: Detail is assigned as a grand theft. The deputy determines that the loss does not exceed the required amount for a grand theft.
         • Proper codes would be: "488.9, disposition RTF".
3. The following information is meant to clarify some sections relative to the proper coding of incidents:

   a. Use only those codes listed in the Detail Listing Booklet.

   b. When one person is arrested for more than one crime, the code shall be given for the two most serious crimes.

      * Example: A person arrested for a burglary, resisting arrest, and battery.

      * The code would be for the appropriate burglary charge and resisting arrest.
I. POLICY
   A. Effective April 4, 2017, all Patrol and Special Operations Division policies and procedures not herein contained are superseded or canceled.
   B. In order to provide effective and efficient police service, procedures must continuously be evaluated and techniques improved. It will be necessary to create and revise policies and procedures as needed.
   C. All personnel assigned to the Patrol and Special Operations Division are responsible for knowing and adhering to the policies and procedures set forth in this manual.

II. PROCEDURE
   A. MAINTENANCE OF PATROL MANUAL
      1. Each member of the Division can access a copy of the manual on the, or via SPARKS.
      2. Changes and / or new policy pages will be placed in the manual on and in SPARKS.
   B. INSERTING NEW MATERIAL
      1. Discard superseded policies or procedures and replace with new.
      2. Definitions of terms used are as follows:
         a. Amended: Addition to present policy
         b. Revised: Changed
         c. Added: Addition of entire section.
         d. Deleted: Deletion of entire section.
         e. Policies: Definitive statements indicating the Department's philosophy to the policy subject matter.
f. Procedure: Either guidelines or rules concerning the implementation of all or part of the policy.

C. MEMORANDUMS THAT EFFECT PATROL DIVISION PROCEDURES

1. All memorandums that have an effect on Patrol and Special Operations Division procedures will be assigned an expiration/review date which will be approximately 12 months after date of issue.

2. After the review date, the memorandum will have to be reissued and incorporated into the Manual to remain in effect.

3. The Assistant Patrol Division Commander will be responsible for maintenance of the master file for such memorandums.
I. POLICY
   A. Patrol and Special Operations Divisions will use inspections as a control process to attain its objectives:
      1. Improve the Division's operational efficiency
      2. Upgrade the Division's professional standards
      3. Ensure personal safety equipment of uniformed officers is properly maintained
   B. The Patrol and Special Operations Division Commanders or their designees may initiate an inspection at any time. Inspections are performed to ensure adherence to Department and Division policies and procedures so the Department and the Division can move efficiently and effectively towards their objectives.

II. GENERAL INFORMATION
   A. An inspection is conducted by personnel of supervisory or higher rank who have direct authority and responsibility for the activity of persons or places being inspected.
   B. The authority to effect immediate corrective changes can be exercised during inspections.

III. PROCEDURE
   A. Station House/Building Inspections
      1. Janitorial services are provided, but Patrol and Special Operations personnel assigned to Station Houses shall be responsible for the overall care, cleanliness and maintenance of the premises.
      2. Necessary repairs and maintenance will be directed to the General Services Department via the Station House Commander or designee.
B. Personnel Inspections

1. All Uniformed Employees are expected to maintain their uniform and equipment in a clean, serviceable condition to ensure maximum safety and efficiency.

2. Personnel Inspections are performed biannually at the end of shift rotation to ensure adherence to Department and Division policies and procedures.

3. The Personnel Inspection Form shall be used.
   a. This completed form will be submitted to the employee's Divisional Personnel file.
   b. The Deputy’s Sergeant WILL inspect the employee’s driver’s license and note the expiration date.

C. Recording and Filing Results:

1. The results of the inspection will be reduced to writing by the member responsible for the inspection and forwarded to the Patrol Division Commander.

2. The report will include, but is not limited to, the following elements:
   a. Report of conditions: The report will clearly define the conditions that existed at the time the inspection was conducted.
   b. Report of deficiencies and/or acceptable conditions:
      • Measurements will be made against an acceptable standard and deficiencies and/or commendable conditions will be accurately reported.
      • NOTE: Acceptable standards are those defined by departmental or divisional policy and procedure.

D. Responsibility for Follow-Up and Corrective Action

1. Reported deficiencies will be corrected in accordance with the following procedures:
   a. Deficiencies caused by outside factors
      • When correction of reported deficiencies cannot be accomplished within the Division (such as deficiencies caused by factors not under control of the Division Commander) they will be forwarded to the level of command having authority to make the proper corrective decision.

2. Deficiencies caused within the unit:
   • When reported deficiencies are correctable within the Division, the deficiencies will be corrected and a follow-up report forwarded to the Division Commander identifying actions taken.
I. POLICY
   A. The following procedures will apply in matters concerning overtime, shift work, and general time-keeping.

II. PROCEDURE
   A. OVERTIME PROCEDURES
      1. Authorization for all overtime, with the exception of holiday overtime, must be approved by a sergeant and/or station commander. Pursuant to Sheriff's Office Policy section 1.04.52, Deputies may not work more than 120 hours of overtime per month. Incidents in which overtime is authorized are as follows:
         a. Court appearances
            • Overtime is authorized for court appearances and pre-trial conferences which are required for deputies during off-duty hours.
            • Subpoena or notice of trial must accompany the "overtime request card", when submitted.
            • NOTE: Overtime is not authorized for travel time to and from court appearances, nor for a lunch recess taken by the court, if applicable.
         b. Late details
            • Overtime may be authorized for a late detail if the detail is of an emergency nature or a major felony and if/or in the opinion of a sergeant and/or station commander is absolutely necessary.
         c. Sick leave relief
            • Overtime will be authorized for sick leave replacement only to maintain the minimum staffing level of the affected shift.
d. Training
   • Overtime for training will be authorized in advance by the Patrol Division Commander or Assistant Division Commander.

e. Special details
   • Incidents requiring overtime, such as extraditions, security for dignitaries, etc., will be authorized by the Patrol Division Commander or Assistant Division Commander.

f. Civil witness cases
   • The Sheriff's Department is reimbursed for all court appearances and/or oral depositions made by Deputies in civil cases.
   • Overtime request cards are submitted as follows:
     • Attach overtime card to the subpoena; in addition, an "information/disposition" form will be completed.
     • Should appearance involve more than one day, do not submit overtime request until completion of appearances. Indicate each day separately.

g. Holiday overtime
   • Overtime for holidays shall be posted on the holiday if it falls on the employee's regular working day or on his/her next regular working day if it falls on one of the employee's regular days off.
   • NOTE: Any person taking either a sick day or a vacation day on their first regular working day after a holiday will not receive holiday overtime pay.
   • Instead, for such employees sick leave or vacation accrual will not be charged, unless the absence exceeds 8 (eight) hours.

2. Submitting Overtime Requests
a. Employees must complete and sign an overtime request card and submit it to the appropriate supervisor in all cases where overtime is authorized.

b. The card must be countersigned by the appropriate supervisor and the Station Commander.

c. The sergeant and/or station commander must submit overtime cards to Payroll without unnecessary delay for any overtime authorized by them.

d. A separate card must be submitted for each authorized overtime detail and must be completed as accurately as possible. All
overtime cards should be in by the first working day after the end of the month in order to receive payment on the tenth of the month paycheck.

B. WORKING SHIFTS AND SHIFT TRADES

1. All deputies will work their shifts as published and posted at the beginning of each watch period. Any adjustments will be settled prior to the starting date of the watch period.

2. All shift trades will be in accordance with Sheriff's Office Policy and Procedures section 1.04.68.

C. TIMEKEEPING

1. All exceptions to the regularly assigned schedule (vacations, sick leave, comp time, etc.) must be documented. Requests for such exceptions are as follows:
   a. Vacation requests
      - Regular annual vacations are scheduled by the Assistant Division Commander.
      - All other requests consisting of one working week off or more must be submitted via e-mail to the Assistant Division Commander for approval.
      - Requests for less than one working week vacation time shall be submitted to the appropriate Station Commander.
      - EXCEPTION: In cases of emergency vacation time off, contact the Assistant Division Commander by phone or in person. Approval or disapproval will be given at that time.
      - Upon approval an "Absence Report Form", will be completed. After being posted on the time sheet, a copy will be given to the employee and the balance of the form delivered to the Administration Payroll Clerk for processing.
   b. Request for holiday comp time
      - Requests submitted for holiday comp time will be done in accordance with the procedures outlined for vacation requests.
I.  POLICY
   A.  Members of the Patrol and Special Operations Division will be punctual in
       reporting for duty at their assigned work station.
   B.  Members will report for duty properly groomed and in the uniform of the day.
       Apparel and equipment will be in a presentable condition.

II. PROCEDURE
    A.  GENERAL RULES
        1.  Patrol and Special Operations personnel shall be at their assigned station
            in full uniform and be ready to work by the beginning of their shift.
    B.  GENERAL RESPONSIBILITIES
        1.  All Patrol personnel will have a neat and clean uniform, shoes shined,
            brass polished.
        2.  All required and necessary equipment shall be carried; Deputies will:
            a.  Check their utility box to insure an adequate supply of forms and
                miscellaneous supplies.
            b.  Review the bulletin board and daily bulletin, and affix their
                signature when required.
            c.  Be subject to dismissal from duty for that watch or tour if they
                report late. Immediate supervisors may allow tardy subordinates
                to assume their duties when prior notification has been received
                that lateness will occur.
            d.  Report for duty promptly
                •  Failure to do so will be neglect of duty and they will be
                   subject to the Department Corrective Counseling
                   procedure/Personnel Management Regulations.
e. Check individual mail slots/boxes and e-mail for messages and other information.

3. All Sergeants and Deputies in the Patrol Division who are assigned a department issued smart phone must adhere to the following guidelines:
   a. Retrieve and turn on their phones at the start of their shift.
   b. Ensure that their phone’s voicemail is properly set up and available to receive messages. The voicemail should minimally state the employees name, phone number, current work assignment, and a statement that if the person calling is reporting an emergency, that they should hang up and call 9-1-1.
   c. Minimally check their voicemail at the beginning and end of their shift.
   d. Employees must comply with General Policy and Procedure Sections: 1.07.54 – E-Mail, Texting, Internet, and Internet Access and 1.07.58 – Social Media/Social Networking Policy with regards to the use of department issued smart phones.
   e. Employees are not to add any applications to the smart phone that are not approved by the Technical Services Division. Employees may recommend the addition of an application to the phone by submitting a memorandum to the Patrol Division Commander, via the chain of command.
   f. Employees are encouraged to utilize their department issued smart phone to make contact with citizens who are requesting contact by telephone. Employees should provide citizens with their phone number for the purposes of follow-up and direct contact with the employee.
   g. Employees are reminded of General Policy and Procedure Section 1.06.51 – Vehicle Operation and Parking Procedures, that prohibits Office of the Sheriff employees from utilizing a cell phone while driving, unless it is being operated in a “hands-free” manner.
   h. Employees may utilize their department issued smart phone to take evidentiary photographs pursuant to General Policy and Procedure Section 1.06.36 – Digital Photography. Photographs should be downloaded into the report writing system and deleted from the phone as soon as it is practical to do so.
   i. Employees should be cautioned that department issued smart phones are provided for the sole purpose of work related business.
   j. Deputies and Sergeants in the Patrol Division who are provided a department issued smart phone are under no obligation to answer phone calls or text messages while they are off duty. Employees are encouraged to leave their department issued smart phone in their locker in between shifts.
k. Employees assigned a smart phone will enter their phone number into their unit history at the start of each shift.

C. BEAT DEPUTIES RESPONSIBILITIES

1. Inspect the patrol vehicle completely.
2. Obtain the beat board.
3. Obtain a portable radio.
4. Document the following numbers on the shift schedule:
   a. Vehicle number
   b. Portable radio
   c. Flashlight
   d. Employee number and Beat/Call sign
   e. Any other station equipment used (shotgun, AR-15, camera, etc.)
5. The beat/call sign and employee numbers will also be given to dispatch by the deputy.
   a. Patrol vehicles with on-board computers (MDC) can be used to log all information above, and notify dispatch.
   b. Deputies must verify the information was received.
I. POLICY
   A. Reports submitted by the Patrol and Special Operations Division personnel will be clear, concise, and complete.
   B. They will be reviewed by the line supervisors prior to Department distribution.
   C. They will be reviewed by Station Commanders and/or City Police Managers after Department distribution.

II. PROCEDURE
   A. GENERAL RESPONSIBILITY
      1. Patrol Deputies are responsible for contacting their supervisor to have their reports reviewed before the end of their shift.
   B. AUTHORITY AND RESPONSIBILITY OF SUPERVISORS
      1. All supervisors have the authority and responsibility to critically review reports and, when necessary, provide guidance and counseling in proper report writing methods and procedures.
      2. They will review all reports generated by personnel and will make sure the reports contain:
         a. The necessary elements of all crimes listed on the face page.
         b. The actions taken by the Deputy and assisting Deputies.
         c. A list of all losses and damages to property and victims.
         d. Complete identification of all the involved parties and a correct disposition.
      3. Supervisors will approve completed reports by logging into the report writing system, reviewing all documents, appropriately routing, and clicking the approve button.
      4. Incomplete, inaccurate, or sloppy reports will be returned to the Deputy to correct the noted deficiencies and resubmit for review prior to going off duty, unless the supervisor makes another arrangement.
a. Requested corrections can be made in the report writing system by the Sergeant prior to rejecting the report back to the Deputy.

b. When appropriate, report critique forms will be utilized to promote training, and to document needed corrections.

c. Ideally the resubmitted report should be reviewed by the supervisor who requested the deficiencies be corrected.

5. When reviewing reports where an entry into C.L.E.T.S. is made, the Supervisor will review the report to verify the accuracy of the information entered into C.L.E.T.S. and that the entry information is supported in the original report.
I. POLICY
   A. Patrol and Special Operations Supervisors will facilitate the proper dissemination of information and ensure that a complete investigation is conducted when necessary, by routing the reports they approve to the proper Outside Agencies, County Departments, Sheriff's Divisions and Patrol Administrators.

II. PROCEDURE
   A. ROUTING WITHIN THE DIVISION
      1. The following guidelines shall apply for proper routing of reports:
         a. All reports shall be read, corrected, and routed by the appropriate Patrol Sergeant or, if necessary, the Station Commander.
         b. The reports will be routed according to the Report Writing Manual and Report Routing Matrix.
         c. If follow-up is required, a copy should be routed to the appropriate deputy or shift.
         d. Reports concerning major felonies and all arrest reports shall have one copy routed to the Patrol or Special Operations Captain.
         e. Any reports of special significance or regarding a newsworthy incident should be routed to the Patrol or Special Operations Captain for his/her information.
         f. One copy of each report will be routed to the appropriate duty station.

   B. ROUTING TO OTHER DIVISIONS
      1. All copies of reports to other Divisions will be routed according to the "Report Routing Matrix."
      2. Reports can be routed anywhere for information only and supervisors doing the routing are encouraged to do so freely in an effort to
disseminate as much information as possible to other units of the Department.

C. DISTRIBUTION

1. The Services Division will handle distribution of reports.

a. Exceptions:
   - Reports concerning in-custody juveniles shall be sent to Juvenile Hall via FAX by the end of shift.
   - Serious Felony Cases and Felony Arrests shall be sent to the investigation division via FAX or e-mail by the end of shift. If the report is unacceptable as written, a copy will be sent to the investigation division via FAX with an attachment detailing the incident and advising the report is being rewritten.
   - Towed Vehicles must have the PF9 form (Tow Sheet) faxed or e-mailed (TOWCLERK) to the Patrol Secretary at FOB, [redacted].
   - 5150 Hospitalization cases where a firearm or weapon is taken or used must have a copy of the completed report, the 5150 form and a copy of the completed 8102 form faxed to the FOB, [redacted], attention Misdemeanor Complaints.
   - Out of state fugitive arrest (1551.1 PC) reports will be faxed to the Civil Sergeant prior to end of shift. Time limits concerning extradition, notifications, and verifications are crucial, and begin at time of arrest.

D. BLOOD/FLUID CONTAMINATED DOCUMENTS

1. The following guidelines shall be utilized when dealing with documents that have been contaminated with blood or other body fluids prior to submission to Records:

a. When a report or other document is believed to be contaminated by blood or other body fluids, and it cannot be rewritten, a copy of the contaminated pages will be made and substituted for the contaminated pages prior to submission to Records.

b. The contaminated pages will be placed in a plastic cover or bag and given to the Supervisor or Manager for disposal. In doing this, the contaminated document will be handled as little as possible and with great care.

c. The employee should wash his/her hands thoroughly after handling the document.

d. The copy machine and all work surfaces which may have been contaminated, should be cleaned.
I. POLICY
   A. Patrol and Special Operations Sergeants are responsible for the daily review of the Station House Computer Aided Dispatch Type (CADT), and shall ensure that all completed reports have been signed off and the entry lined out on the CADT report.
   B. The following procedures shall apply for daily processing of the CADT at station houses.

II. GENERAL INFORMATION
   A. CCCSO Policy 1.06.41 states, “Crime reports shall be completed and routed in an expeditious manner to ensure the necessary information is received by the appropriate people.”
   B. Deputies shall complete arrest reports, or reports involving serious crimes, before the end of shift.
   C. Deputies shall submit all reports prior to beginning their days off, unless authorized by their immediate supervisor.
   D. In order to hold over reports, deputies must first contact their immediate supervisors and receive their permission (see the below listed procedure).
   E. The CADT is automatically generated for each station house by Technical Services personnel and emailed to the Station House Commander each day Mondays through Fridays.

III. PROCEDURE
   A. DAILY AUDIT OF CADT
      1. The dayshift sergeant will obtain a copy of the CADT report, either through placement on the distribution list or from the Station House Commander.
      2. Each shift sergeant shall conduct an audit of the CADT on a daily basis through the following steps:
a. Review the CADT, and highlight the reports on the CADT that belong to deputies on their shift which have not been lined out.

b. Check the report writing system.
   • Log into the report writing system.
   • Once the mask appears, go to the “Reports in-progress” box near the top of the page, and highlight the appropriate city code. For example, “MUI.”
   • Next, go to the center of the screen to the “Search” icon.
   • Click on “Search” and a mask will appear.
   • Type in the DR number and leave the any status box blank.
   • This will locate the report if it is in the report writing system, no matter what status the report is in.

c. Check the WEB Query system.
   • Log into WEB Query.
   • Check to see if the CADT was by-passed, and verify the report is in the system.
   • In the box marked “Value” you must type in a nine-digit DR number. For example, 050012345.

d. As a last resort open the Tiburon menu.
   • Open the “Incident” folder.
   • Open the “Entry” mask.
   • Enter the DR number.
   • Look at the “Incident” mask to determine whether or not the RECORDS Unit received the report.
   • If the RECORDS Unit received the report there should be an employee number listed in the CLERK box, and in the “CONROL” box.
   • Click on the “Notes” tab.
   • Review the “Notes” mask to determine if the RECORDS clerk entered the original report and/or a supplemental report.
   • If the RECORDS clerk entered an original report you will see “D.E.” or “Orig.” entered.
   • If the RECORDS clerk entered a supplemental report you will see “Supp.” entered.

3. If the sergeant is able to account for the report in WEB Query, Tiburon or the report writing system, he/she shall initial the report on the CADT.
4. If the sergeant is unable to locate the report, he/she shall notify the deputy who initiated the DR. The sergeant shall follow up with the deputy to determine the status of the report.

5. The CADT reports shall be placed on the CADT Board at the conclusion of each day.

B. REPORTS APPROVED FOR HOLDOVER

1. If a sergeant allows a deputy to hold over a report, the deputy shall complete an “A” page in the report writing system and print the “A” page.
   a. Any completed forms shall be attached with a paperclip to the “A” page.

2. The sergeant shall initial the “A” page, and place it into the “Holdover Reports” box in the Sergeant’s Office.

3. The sergeant shall retain the original “A” page in the “Holdover Reports” box until the report has been completed.

C. SUPPLEMENTAL REPORTS

1. Supplemental reports, which are not listed on the CADT, must be handwritten on the CADT by the supervisor who signs off the supplemental report.

2. The supervisor shall write down the DR number, crime classification, and name of the deputy who wrote the supplement.

D. TOW FORMS

1. Tow forms that are assigned a DR number will appear on the CADT report, but cannot be located in the report writing system, WEB Query, or Tiburon.

2. Sergeants shall verify the status of a tow form by locating the yellow copy retained at the respective station house.

3. If the sergeant is able to account for the tow form, he/she shall initial the tow form on the CADT.

4. If the sergeant is unable to locate the tow form, he/she shall notify the deputy who initiated the DR. The sergeant shall follow up with the deputy to determine the status of the tow form.

E. STATION HOUSE COMMANDER’S RESPONSIBILITY

1. The Station House Commander shall ensure the above listed procedures are followed and is responsible for compliance of staff under his/her command.
I. POLICY

A. The Office of the Sheriff maintains substations throughout the County in order to provide better service response to the community.

B. Patrol personnel assigned to these substations shall adhere to all Departmental policies and procedures.

II. GENERAL INFORMATION

A. CARE AND MAINTENANCE

1. Janitorial services are provided, but Patrol personnel assigned to Station Houses shall be responsible for the overall care, cleanliness and maintenance of equipment located there.

2. A business office atmosphere is necessary to maintain a presentable appearance to the public.

B. LOCATION OF STATION HOUSES/CONTRACT CITIES

1. Bay Station
   Address: 5555 Giant Hwy, Richmond 94801
   Phone Numbers:
   Public: (510) 262-4203

2. Delta Station
   Address: 210 O'Hara Avenue, Oakley, 94561
   Phone Numbers
   Public: (925) 625-2341

3. Marine Services / Air Support
   Address: 70 Lauritzen Ln, Oakley, 94561

4. Muir Station
   Address: 1980 Muir Road, Martinez, 94553
   Phone Numbers:
III. PROCEDURE

A. RESPONSIBILITIES OF PERSONNEL

1. Patrol members shall not congregate at station houses except when necessary to perform a task relative to their duty (i.e., line-up, make telephone calls, write lengthy reports, conduct interviews, etc.).

2. The last person leaving shall secure the building.
I. POLICY
   A. The Sheriff's Office is augmented by a Sheriff's Reserve force and by Sheriff's Cadets.
   B. Members of these units donate their time to aid and assist the Patrol Division and Special Operations in achieving and accomplishing the goals established.
   C. In order to utilize their presence, the following guidelines and procedures are established and are inclusive of those procedures set forth in the Sheriff's Office Policies and Procedures Manual. (Sheriff’s Office Policy and Procedures Manual Section 1.06.02)

II. GENERAL INFORMATION
   A. RESERVE LEVELS AND AUTHORITY
      1. Reserves: The following information pertains to the Peace Officer powers and authority of Reserves:
         a. Level I Reserves:
            • Level I Reserves may be used as prescribed in Penal Code Section 832.6(a)(1), which states in part: "May be assigned to the prevention and detection of crime and the general enforcement of the laws of this State, whether or not working alone."
            • Level I Reserves are not authorized to have a citizen ride-along.
         b. Level II Reserves:
            • Reserves in this classification may be used as prescribed in Penal Code Section 832.6(a)(2), which states in part: "May be assigned to the prevention and detection of crime and the general enforcement of the laws of this State while under the immediate supervision of a peace officer possessing a basic certificate issued by the Peace Officer's Standards and Training Commission."
• Level II Reserves are not authorized to have citizen ride-alongs.

c. Level I, II, and III Reserves will transport arrestees as directed by the Patrol Sergeant.

d. Level III Reserve Officers are defined in Penal Code Section 832.6(a)(3) which states in part that a Level III Reserve Officer “may be deployed and are only authorized to carry out limited support duties not requiring general law enforcement powers in their routine performance. Those limited duties shall include traffic control, security at parades and sporting events, report taking, evidence transportation, parking enforcement, and other duties that are not likely to result in physical arrests. Level III Reserve Officers, while assigned those limited duties, shall be supervised in the accessible vicinity by a Level I Reserve Officer (who has completed an academy) or a full-time officer.

• Level III Reserves are not authorized to have citizen ride-a-longs, but they may be paired with other Level III Reserves working Level III assignments.

• Level III Reserves are not authorized to ride along in a patrol environment (including Marine Patrol) based on the fact that Level III Reserves are not to be assigned duties likely to result in physical arrests.

B. RESERVE UNITS

1. Reserves are assigned to the following areas because of their specialized skills:

   b. Reserve F.A.S.T. Team

   • This team is made up of Level I and Level II Reserves who can respond on short notice to critical incidents within the Sheriff's jurisdiction.

   • In the event of a major incident requiring immediate staffing, the Reserve F.A.S.T. Team can be activated by the Patrol Sergeant notifying the Reserve Coordinator through Sheriff's Dispatch.

   • In the absence of the Reserve Coordinator the F.A.S.T. coordinator will be notified directly for activation by Sheriff's Dispatch. The F.A.S.T. Team coordinator will determine the availability of staff to respond to a critical incident.

   c. Search and Rescue:

   • Members are dedicated volunteers who can be summoned to assist the Sheriff's Office during the following critical incidents:
- Missing adults
- Lost or missing children
- Searches for criminal offenders
- Area searches for evidence

- In the event of a call out, the Patrol Sergeant notify the Reserve Coordinator, Sheriff's Dispatch will utilize the Search and Rescue callout list in Dispatch.

- When individuals on the callout list cannot be located SAR Dispatch will be called by Sheriff's Dispatch.

d. Marine Divers:
- During a callout for Sheriff's Office Divers the Patrol Sergeant will notify the Marine Patrol Lieutenant

### III. PROCEDURE

#### A. DEPLOYMENT OF PATROL AND SPECIAL OPERATIONS RESERVES:

1. Reserves will be scheduled and deployed by the Volunteer Services Sergeant/Coordinator and report directly to a Station House or Contract City.
   a. The Station Commander, Contract City Manager or Patrol/Special Operations Sergeant may assign Reserves as needed.

2. Level I Reserves may be assigned to work alone
   a. They are not to be used to replace a salaried Patrol or Special Operations deputy or to maintain minimum staffing levels.

3. Both Level I and Level II Reserves may be utilized for traffic control and transportation details.

#### B. PATROL AND SPECIAL OPERATION DEPUTIES RESPONSIBILITIES:

1. The following guidelines are to be adhered to by Patrol or Special Operations members who may have Reserve personnel assigned. These guidelines include, but are not limited to:
   a. Training the Reserves in Patrol functions and duties.
   b. Evaluation of a Reserve's performance, either orally or in writing.
   c. Reporting incidents of misconduct of Reserve personnel, in writing, to the Volunteer Services Sergeant.
   d. Reserves may operate the Patrol or Special Operations unit under the supervision of a full time sworn Deputy Sheriff.
   e. Reserves may be assigned to write certain details, such as parking citations, alarms, petty thefts, found property reports, etc. Details that generally require no follow-up investigation and no suspect information.
C. REPORTING FOR DUTY

1. Reserves, when scheduled will report directly to a prearranged work location or Station House, at the agreed upon designated time.

2. Reserves will be well groomed and in appropriate uniform, together with authorized equipment.

D. FUNCTIONS AND USE OF SHERIFF’S CADETS

1. The Sheriff's Office Cadet Program is an opportunity for members of the community to be exposed to the responsibilities and duties of a Deputy Sheriff by those persons interested in a career in law enforcement.
   a. The extent of training and participation in Patrol activities is at the discretion of the assigned Deputy and Patrol Advisor.

2. The following guidelines are established to enable Cadets an opportunity to receive such exposure:
   a. Cadets may participate in ride-alongs, when scheduled with approval from the Cadet Advisor and Patrol Sergeant.
   b. Cadets will report in the appropriate uniform and be well groomed.
   c. Cadets will avoid continually riding with the same deputy as much as possible.
   d. The Deputy assigned a Cadet ride-along will attempt to provide insight and training in the Patrol function and responsibilities.
   e. Patrol and Special Operations members should remember that a Cadet’s status is similar to that of a citizen ride along.
   f. All incidents of misconduct will be reported in writing to the Cadet Advisor.

3. CONDUCT OF CADETS
   a. Cadets when assigned to a Patrol function will comply with and obey all policies and procedures applicable to a regularly employed deputy.

4. CADET POSTS
   a. The Sheriff's Office Cadet Post is located within the Office of Emergency Services building in Martinez.
   b. The Cadet Advisor for this post is the Volunteer Services Coordinator.
I. POLICY
   A. Patrol and Special Operations Division Deputies will provide a wide range of public service to ensure that our community is a safe place in which to live and to deter crime.
   
   B. That service will be performed in a professional manner under the following guidelines.

II. GENERAL INFORMATION
   A. DIVISION OBJECTIVE
      1. The Patrol and Special Operations Division operation is made-up of many diverse activities which are directed towards the Division's objectives.
         a. Activities such as patrolling, conducting field interviews, issuing citations and making arrests are not objectives in themselves. They are methods of achieving the Division's objectives:
         b. To assure that officers strive towards these goals in an effective manner, the following procedures are maintained to inform officers of, and to guide them in their performance of specific duties.

III. PROCEDURE
   A. PREPARATION FOR PATROL
      1. Division members are responsible for keeping current on information that pertains to suspects and/or probable events that may have an impact on the public's welfare and safety. Some examples of special conditions existing in their assigned area are:
         a. Patterns of criminal activity, and locations of known criminals.
         b. Possible targets for criminal activity, etc.
         c. Descriptions of wanted, missing, or suspicious persons.
d. Descriptions of stolen property.

2. Division members will keep the information in their beat boards current, and will have the boards with them while in the field.

3. Division members will properly call in or document their beat, patrol unit, portable radio, and other equipment as may be required before going to the field.

B. BASIC FUNCTIONS

1. A Patrol or Special Operations member will become acquainted with:
   a. Their area’s beats
   b. Beat boundaries
   c. Crime-prone areas
   d. Businesses
   e. Possible targets for criminal activity
   f. Any other condition which is detrimental to life or property.

2. Members will also continuously seek to prevent, detect, or anticipate criminal activity.

3. To accomplish these functions, the following tasks will be performed as often as possible:
   a. Inspect premises for doors ajar, broken windows or other conditions conducive to crime or indicative of criminal activity.
   b. Carefully observe and take notes of the action of persons who might be involved in crime and take appropriate action.
   c. When reasonable suspicion of wrong doing is identified, follow proper case law and policy to stop and question those responsible.
   d. Obtain information on criminal activity through frequent contacts with residents, workers, merchants, and passers-by on the member's assigned beat.
   e. Inform the residents, workers, and merchants on the beat of actions they can take to protect their person or property from crime.
   f. Frequently patrol areas or places where criminal activity most often occurs.
   g. Carefully observe all premises which may be used to “fence” stolen goods and note suspicious persons.
   h. Observe all places of business and note the location of safes, cash registers, night lights, alarm systems, habits of staff, time of opening and closing, nature of business, number and locations of exits, and means of securing, such as locking doors, windows, gratings and skylights or other barriers.

C. FREQUENCY OF PATROL
1. Officers will patrol their assigned beats as often as possible, and will use the time available between radio assignments to observe conditions of the beat and take appropriate police action to correct and report any hazardous condition coming to their attention.

2. Patrol members, will on a daily basis, vary the sequence and schedule of their patrol activity, meal breaks and locations of those breaks so that potential criminals cannot anticipate the officer being in a given place at a given time.

D. RESPONSE TO DETAILS
1. Once a detail has been received, officers will proceed to that detail as soon as possible.

2. Officers will limit radio traffic whenever possible by making optimal use of MDC's, when they are available, and it is safe to do so.

3. Officers will advise Dispatch of the following:
   a. Estimated time of arrival to the detail, on Priority 1 and 2 details.
   b. If the officer is going to have an extended time of arrival on a Priority 3 detail.
   c. Arrival on the scene.
   d. Officer's Status (Code 4. Etc., with updates requested by dispatch)
   e. Completion of assignment.
   f. Disposition and appropriate codes.

E. MEALS AND OTHER BREAKS
1. It is an established policy that field personnel will generally work a straight eight, nine and one half hour, ten, or twelve hour / forty minute shift.

2. Patrol and Special Operations members will adhere to the following procedures:
   a. A thirty-minute meal period is inclusive in an eight or more-hour shift.
   b. Two 15 minute-breaks each shift are allowed for coffee, tea, or refreshments when time permits. These breaks will not be in conjunction with a Code-7 meal break.
   c. Breaks and Code-7 will be within the Deputy's assigned beat, unless approved by the Patrol or Special Operations Sergeant or field supervisor.
   d. When on meal or other break, the deputy will monitor his/her portable radio.

3. When going out of service for any reason, Dispatch will be advised of the following:
   a. The reason for the out of service status
b. Address or geographic location

c. Telephone number of where the Deputy will be.

4. Deputies who choose to take their breaks or Code-7 in their patrol cars will advise Dispatch (via MDC if available) of their geographic location.
   a. Updates to Dispatch are required if the location changes.
      • Patrol and Special Operations Uniformed Deputies working beats will not go out of service using a cell phone number or pager number as the only means of contact by Dispatch without the approval of the Patrol or Special Operations Sergeant or field supervisor on each occasion and location.
      • Deputies shall not remain out of service longer than necessary and will report back in service promptly.
      • The time for meals and other breaks may be limited at the discretion of a Patrol or Special Operations Supervisor if calls for police service are required. Deputies on breaks are subject to call outs and shall not congregate at any location during working hours unless detailed, approved by the Patrol or Special Operations Sergeant or for emergency reasons.
      • No more than two Deputies will be permitted at the same location and time for purposes of a break without prior approval from their supervisor.

F. SUPERVISOR'S RESPONSIBILITIES

1. Patrol and Special Operations supervisor's responsibilities encompass and reinforce the subordinates' duties with additional supervision, direction and control, and other tasks specified in the manual or assigned by competent authority.

2. Patrol supervisors will meet with beat deputies as often as necessary and practical to insure that police services are properly and efficiently performed.

3. At shift's end, each supervisor will ensure that those members assigned appropriately process all reports, evidence, property and equipment.

G. INABILITY TO LOCATE BEAT DEPUTY

1. When an area supervisor is personally unable to locate a beat deputy, such supervisor will initiate a thorough search utilizing other beat deputies assigned to the supervisor's area.

2. If the missing deputy cannot be located within a reasonable time, the supervisor will ensure that the beat is properly covered.

3. The supervisor will then notify the appropriate Station Commander/Police Service Manager or Watch Commander.

4. Once the missing officer is located, the area supervisor will inquire as to the reason for the deputy not being available and report the findings
either orally or in writing to the appropriate Station Commander/Police Services Manager.

a. The appropriate Station Commander/Police Services Manager or Watch Commander may take immediate action which is appropriate and authorized or forward the report to the Division Commander, if the incident requires such action.

H. LEAVING THE BEAT

1. Patrol and Special Operations members may leave an assigned beat whenever any of the following conditions are met:
   a. To aid and assist other officers when requested or required.
   b. When performing a follow-up process after advising dispatch and their Patrol or Special Operations Sergeant or Field Supervisor.
   c. When ending a tour of duty.
   d. When in pursuit of a fleeing suspect.
   e. When assigned or authorized by competent authority.

I. DUTIES AT COMPLETION OF SHIFT

1. Patrol and Special Operations members will adhere to the following procedures when a tour of duty nears completion:
   a. At an appropriate time, notify Dispatch of the intent to respond to the office for the purpose of going off duty.
   b. Patrol and Special Operations Deputies are not to terminate their tour of duty or sign off the air prior to fifteen minutes before end of the watch.
   c. Deputies will be permitted to sign off the air fifteen minutes prior to end of watch for the purpose of completing any reports resulting from the day's activity.
   d. When notified by Dispatch that off-duty status is not authorized, remain on the assigned beat until notified otherwise by Dispatchers or other competent authority.
   e. Upon arrival at the office, complete and submit all reports and process all evidence or other property, prior to leaving the facility unless other arrangements have been made with approval of the Shift Supervisor.
   f. When appropriate, inform relieving deputy of incidents or circumstances that may affect, hinder, or assist such relieving deputy in the performance of assigned duties.
   g. Inspect individual mail slot or box for any messages received during shift. Check email and voicemail at least once a shift.
   h. Remove all Patrol and Special Operations Division shoulder fired weapons, shotguns, AR-15’s and less lethal, from their
patrol vehicle and store in a secured location within their respective Station House/Police Department.
I. POLICY

A. Under normal conditions, members of the Patrol and Special Operations Division will obey provisions of the law relating to the operation of vehicles in the same manner required of any other person using the roadway.

B. Members are responsible for ensuring that their assigned vehicles are in a safe and operational condition.

C. The use of County vehicles will be limited to those operations which support the Patrol and Special Operations mission.

II. PROCEDURE

A. GENERAL OPERATION OF VEHICLES:

1. Patrol and Special Operations members will adhere to the following procedures whenever their duties require the use of a Patrol vehicle:

   a. Inspection of vehicles

      • At the beginning of each tour of duty, Patrol and Special Operations members shall make a thorough inspection of the vehicle and its equipment.

      • Items that will be inspected or checked include the following:

         • Condition of tires, wheels and fluid levels.

         • Emergency equipment.

         • Locking mechanisms\windows\glass.

         • Condition of other equipment (brakes, lights, radio system, etc.)

         • NOTE: Radiator caps will not be removed when hot or unsafe.

   b. Damaged vehicle or inoperative equipment
• Any damaged vehicle or missing/inoperative equipment shall be reported immediately unless the driver has personal knowledge that such damage or missing/inoperative equipment has been previously reported.

• When the damaged or missing/inoperative equipment is such that the vehicle should not be used, the deputy will obtain another vehicle after logging the defect.

B. REPORTING DAMAGED VEHICLES OR INOPERATIVE EQUIPMENT

1. Patrol and Special Operations members who discover previously unreported damage, missing or inoperative equipment shall adhere to the following:
   a. Vehicle damage shall be reported immediately to a Patrol Sergeant who will log damage on the "vehicle accident" form kept in the vehicle's glove box or other designated place and take photographs of all damage.

   • Vehicle damage incurred other than as a result of a traffic collision shall be reported as previously set forth and shall include a memorandum as directed by a Patrol/Special Operations Sergeant or Station House Commander/Police Services Manager.

   b. Vehicles in need of service, repair of mechanical defects or missing equipment shall be reported by the last operator, who will complete an "equipment service request" form indicating the nature of the problem and return it to the Station House Commander/Police Services Manager or Patrol/Special Operations Sergeant along with the keys to the vehicle.

   c. NOTE: The last driver of a vehicle is responsible for any damage or defective equipment unless he/she proves otherwise.

2. Driver responsibilities
   a. Patrol and Special Operations members who discover unreported damage to a Patrol vehicle shall report such damage as follows:

   • Driver will have the area supervisor respond to initiate an investigation and determine the last driver of vehicle.

   • Driver finding damage shall submit a memorandum through the chain of command to the Patrol Division Commander.

3. Patrol and Special Operations members whose vehicles incur damage as a result of vandalism or theft of items from the vehicle shall adhere to the following:
   a. Conduct an official investigation and complete a crime report and have photographs taken by the Patrol or Special Operations Sergeant if necessary.
• Notify area supervisor of occurrence and submit memorandum along with any reports to the Patrol Division Commander.

4. Area supervisor responsibilities
   a. Supervisor and driver complete the "vehicle damage sheet."
      • Take appropriate photographs and mark damaged area with initials.
   b. Submit memorandum regarding investigative findings as to the last driver of vehicle and circumstances regarding damage.
      • Ensure that all memorandums and necessary reports are submitted through the chain of command to the Patrol Division Commander.

C. SERVICING PATROL VEHICLES
1. The following procedures regarding the servicing of Patrol vehicles shall be carefully followed by all Patrol members:
   a. Patrol vehicles shall be serviced at County garages whenever possible.
   b. Patrol vehicles serviced at in field contract gas stations shall be limited to the following:
      • Gasoline and oil as needed.
      • Minor items such as fan belt adjustment or replacement, light bulbs, headlights, fuses.
      • Tire repair: Plugs, tubes, and sidewall repairs are not authorized. Patches are allowed.
         • EXCEPTION: Deputies are encouraged to have a tow truck Service respond to their location to change flat tires. However, if circumstances do not permit the use of a tow truck service and the Deputy is PHYSICALLY ABLE he/she may change the flat tire.
      • All sales tags for service or materials obtained in the field at contract gas stations must be signed legibly by the Deputy, with his/her employee number written on the invoice/receipt.
         • Before signing any sales tag, the Deputy must make certain that the vehicle equipment number is shown and that the total of the purchase appears on the bottom of the tag.
      • Except in emergencies, Patrol and Special Operations members will utilize only those locations authorized by Fleet Services for gas, oil and other service.
Patrol and Special Operations members are not to use fuels of a different grade than specified on the gas cap/area, dashboard area or as directed in the service manual for the vehicle being fueled.

- Fuel used for the Patrol Vehicle Fleet generally uses regular unleaded gas.
- Diesel powered vehicles must have diesel fuel.
- It is the responsibility of the Deputy to know what type of fuel the vehicle being driven uses.

c. The responsibility for having Patrol vehicles washed rests with day or swing watch personnel.

- Vehicles should be washed when needed as time permits, at those car washes authorized by Fleet Services.
- NOTE: Under no circumstances should Patrol and Special Operations members accept any premium service offered with the purchase of items or services at contract gas stations, or other service providers.

D. TOWING PATROL VEHICLES

1. The following procedures will be used when Patrol vehicles which are wrecked or disabled and require towing:

a. During the hours of 0700 – 1700, Monday through Friday (excluding holidays) Fleet services will handle towing the patrol vehicle. Contact number is [redacted]. After hours, on weekends or holidays, dispatch will contact the tow company which is designated as the primary tow service.

b. All wrecked and/or disabled vehicles shall be towed directly to the Public Works Garage at 2467 Waterbird Way, Martinez.

c. It shall be the responsibility of a Patrol or Special Operations Deputy to ensure the removal of the shotgun and rifle from all Patrol vehicles prior to towing.

- The shotgun and rifle is to be tagged with the unit's number and placed in a secure location as designated by the Station House Commander/Police Service Manager.

d. The Patrol and Special Operations members authorizing the towing of a Patrol vehicle shall be responsible for:

- Legibly signing the tow receipt with his/her name.
- Putting their employee number on the tow invoice.
- Ensuring the vehicle's equipment number is on the receipt. A copy of the towing receipt shall be delivered to the Station House Commander/Police Services Manager.
e. Deputies having a disabled vehicle towed shall place a note on the dash explaining the mechanical problem, if known.

f. NOTE: Minor repairs are the responsibility of the driver of the vehicle. Tow service shall not be dispatched for repairs of this nature.

E. MISCELLANEOUS PROCEDURES

1. In addition to the aforementioned procedures, Patrol and Special Operations members shall adhere to the following whenever applicable:

a. Patrol vehicles are not to be used for pulling or pushing other vehicles unless equipped with push bumpers.

b. The last driver of a vehicle is responsible for refueling the vehicle at the end of shift and for removing all litter from the interior.

c. All Patrol members driving or riding in Patrol vehicles shall wear safety belts with shoulder harness.

d. Deputies failing to return vehicle keys to the Patrol or Special Operations Sergeant or designated location upon completion of their watch will be contacted and directed to return the keys immediately.

e. Patrol and Special Operations members shall be held responsible for safeguarding vehicles and equipment contained therein.
   • Unattended Patrol vehicles shall be properly secured by locking doors and windows.

f. The driver of a vehicle equipped with an M.D.C. will not operate this equipment while driving the vehicle.
I. This policy has been removed effective 6-16-15

II. Refer to CCCSO Policy 1.06.42 – Ride-Along Program
I. POLICY
A. The Sheriff's Office Patrol Division is augmented by Sheriff's Community Service Officers (CSO).
B. Sheriff's Community Service Officer will assist the Patrol Division in achieving and accomplishing the goals established.
C. Sheriff's Community Service Officer will be punctual in reporting for their assigned work station.
D. Sheriff's Community Service Officers will provide a service performed in a professional manner.

II. PROCEDURE
A. GENERAL RULES
   1. Sheriff's CSOs shall be at their assigned station in full uniform and be ready to work by the beginning of their shift.
B. GENERAL RESPONSIBILITIES
   1. All Sheriff's CSOs will have a neat and clean uniform, shoes shined, brass polished.
   2. All required and necessary equipment shall be carried; CSOs will:
      a. Check their utility box to ensure an adequate supply of forms and miscellaneous supplies.
      b. Review the bulletin / line-up boards and affix their signature when required.
      c. Be subject to dismissal from duty for that watch if they report late. Immediate supervisors may allow tardy subordinates to assume their duties when prior notification has been received that lateness will occur.
      d. Report for duty promptly.
C. SHERIFF’S COMMUNITY SERVICE OFFICERS RESPONSIBILITIES

1. Inspect vehicle completely before leaving the station house.
2. Obtain a portable radio.
3. Notify the supervisor of the following numbers:
   a. Vehicle number and vehicle mileage at start time
   b. Portable radio
   c. Flashlight
   d. Employee number and call sign
   e. Department Issued cell phone

4. The call sign and employee number will also be given to Dispatch by the CSO.
   a. Patrol vehicles with on-board computers (MDC) can be used to log all information above, and notify Dispatch.
   b. CSO’s must verify the information was received by Dispatch.

D. BASIC FUNCTIONS

1. CSOs will become acquainted with:
   a. Their area beats
   b. Station House beat boundaries
   c. Crime prone areas
   d. Businesses
   e. Possible targets for criminal activity
   f. Any other conditions which are detrimental to life or property

E. DUTIES

1. The duties of the Sheriff’s CSO in the Patrol Division shall include, but not be limited to the following:
   a. Receive and respond to citizen inquiries and requests for law enforcement service at a public counter, by telephone, and in the field.
   b. Write reports and supplemental reports regarding cold cases.
   c. Write auto theft reports, issue warning notices, tows, and abates abandoned vehicles.
   d. Enforcement of county ordinances and various CVC regulations.
   e. Provide security checks and community presentations for the Office of the Sheriff.
   f. Provide assistance with lost and found property, area searches, and transportation of found children and elders.
g. Provide traffic and crowd control for public events, fire, flooding, hazardous materials, and other related incidents.

h. Fingerprint citizens and perform minor evidence collection duties to include fingerprint evidence.

i. Enter and retrieve confidential law enforcement information using computerized law enforcement data systems.

j. Use a two-way radio to receive and provide information.

k. Perform an assortment of administrative and messenger duties.

l. Assist in other areas, consistent with the needs of the Office.

F. RESPONSE TO DETAILS

1. Once a detail has been received, CSO’s will proceed to that detail as soon as possible.

2. CSO’s will limit radio traffic whenever possible by making use of MDC’s when they are available, and it is safe to do so.

3. CSO’s will advise Dispatch of the following:
   a. Time of arrival
   b. If the CSO is going to have an extended time of arrival
   c. Arrival on scene
   d. CSO’s status (e.g. code 4, updates requested by Dispatch)
   e. Completion of the assignment
   f. Disposition and appropriate codes

G. MEALS AND OTHER BREAKS

1. It is an established policy that CSO’s will work ten hour shifts.

2. Patrol CSO’s will adhere to the following procedures:
   a. A thirty minute meal period is inclusive in a ten hour shift.
      • CSO’s will ask Dispatch if they are cleared for a meal period (code 7) via MDC, telephone, or over the radio as a last choice.
      • Two 15-minute breaks are allowed during each shift when time permits. These breaks will not be in conjunction with a code-7 break.
      • Breaks and code-7 will be within the CSO’s assigned beat, unless approved by the Patrol Sergeant or field supervisor.
      • When on a meal break or other break, the CSO will monitor their portable radio.
   
3. When going out of service for any reason, Dispatch will be advised of the following:
   a. The reason for the out of service status
b. Address or geographic location

c. Telephone number of where the CSO will be

H. DUTIES AT THE COMPLETION OF THE SHIFT

1. Sheriff’s CSO’s will adhere to the following procedures when a tour of duty nears completion:

   a. At the appropriate time, notify Dispatch of the intent to respond to the station house for the purpose of going off-duty.

   b. Sheriff’s CSO’s are not to terminate their tour of duty or sign off the air prior to fifteen minutes before the end of watch.

   c. When notified by Dispatch that off-duty status is not authorized, remain on the assigned beat until notified otherwise by Dispatch or other competent authority.

   d. Upon arrival at the station house, complete and submit all reports and process all evidence or other property prior to leaving the facility unless other arrangements have been made with the approval of the Shift Supervisor.

   e. Inspect individual mail slot for messages received during shift. Check e-mail and voicemail at least once a shift.

   f. Park and secure their vehicle.
I. POLICY

A. Deputies will remain alert to gather information from witnesses, suspects, or arrestees that will help in the solution of crime.

B. Deputies will interview, interrogate or otherwise question persons in accordance with the law and established procedures.

II. DEFINITIONS

A. Interviews: The process by which a deputy obtains information from a cooperative individual who is not responsible for the incident under investigation, but who has personal knowledge of circumstances or facts that are of interest.

B. Interrogations: The process by which a deputy obtains information from an uncooperative individual who is either a suspect, witness, or victim of the incident under investigation.

III. GENERAL INFORMATION

A. INTERVIEWS AND INTERROGATIONS

1. An interview is conducted in order to collect any facts relating to an incident, to substantiate information obtained from other sources, or to provide additional information pertaining to the incident under investigation.

2. An interrogation is conducted in order to establish the extent of involvement of a particular person suspected of committing a crime and/or to obtain information from uncooperative individuals who have knowledge of the incident under investigation.

B. INTERVIEWS-LEGAL RESTRICTIONS

1. When a deputy has not arrested an individual or restricted the individual's freedom or ability to discontinue the conversation, the deputy may ask whatever questions are necessary and pertinent.
a. The key in this circumstance is custody- where there is "no custody," the law places no restrictions on questioning.

IV. PROCEDURE

A. INTERVIEWS-AUTHORITY AND METHOD

1. Deputies will, when possible, interview any person who may have the potential to supply information that relates to an incident under investigation.

2. Interviews will be conducted at a place that is convenient and familiar to the person being interviewed and as soon after the incident as possible.

3. Deputies will conduct interviews in a low pressure, informal manner that causes the least amount of inconvenience to the person being interviewed.

4. During the interview deputies should determine if the person or persons possess the following essential elements:
   a. Presence at the scene: Was the person to be interviewed present during the event, or portion of the event, under investigation?
   b. Awareness: Was the person to be interviewed conscious of the event, or a portion of the event, which prompted the investigation?
   c. Observant: Was the person attentive to the details of the incident?
   d. Ability: Is the person capable of discussing the observed event in a manner that is understandable and complete?

5. Deputies should note the condition of witnesses, their relationship to the incident under investigation, and any other information which would establish their credibility.

B. INTERROGATIONS

1. When a deputy acts to exert authority and/or control over a person in a manner which restricts the person's freedom to act, then a custody situation exists and legal restraints on questioning arise to protect the person's rights in regards to self-incrimination and assistance of counsel.

   a. The point where custody occurs is determined by the circumstances surrounding the interrogation as interpreted by a "reasonable person."

      - The beliefs or intent of the deputy and/or the suspect are not considered. Factors that are considered when applying the "reasonable person" test, are as follows:

      - Place of questioning: When conducted at a police facility, in police vehicles, at jail, or in a prosecutor's office, such circumstances may lead to a conclusion that "custody" has occurred.
Time of questioning: When conducted during odd hours.

Persons present: The removal of a person from the presence of family, friends, or the presence of several deputies, may indicate a "custody" interrogation.

Physical restraint used: Any type of physical restraint invariably leads to a finding of "custody."

Orders to perform tasks not required: Any orders by the deputy to do something that the law does not require is indicative of custody.

Length and form of questioning: Lengthy questioning consisting of accusative statements, confrontation with witnesses or evidence, and leading questions may lead to a finding of "custody."

Demeanor of the Deputy: When a deputy is accusative and confronts a person with alleged guilt, the "custody" finding may occur.

b. A Deputy may question persons for purposes of obtaining information such as name, address, telephone numbers, occupation and other identifying data without advising them constitutional rights.

In addition, suspicious persons may also be asked to explain their presence and conduct without advising them of their rights.

C. "CUSTODY" OF JUVENILES

1. Juveniles will be advised, as soon as possible and when practical, of their constitutional rights if taken into custody. (Pursuant to 625 W&I)

D. "CUSTODY" OF ADULTS

1. Whenever a deputy arrests, or otherwise takes "custody" of an adult person, and the deputy intends to question such person about incidents, actions, or conduct which is criminal in nature, the Deputy will then advise the person arrested of their constitutional rights.

E. WARNING PRIOR TO INTERROGATION

1. Each deputy will carry the plastic "Miranda Warning" card issued by the Patrol and Special Operations Division.

2. When appropriate, the arresting deputy will notify the person to be questioned of his/her “Miranda Rights” by reading aloud from the card.

F. WAIVER OF CONSTITUTIONAL RIGHTS

1. Before statements made by suspects become admissible in court, the prosecution must offer evidence to prove that suspects were not only
advised of their rights, but also that they understood the advisement and having been so advised, knowingly and intelligently waived those rights.

2. To secure a waiver the following questions will be asked:
   a. “Do you understand each of these rights I have explained to you?”
   b. “Do you wish to talk to us now?”

3. An affirmative reply will be obtained from suspects before questioning begins.
   a. Circumstances which establish an "affirmative reply" include, but are not limited to, the following:
      • Formal waiver (Express Consent): Where suspects state orally and unequivocally that they understand their rights and wish to talk.
      • Waiver followed by statement (Implied Consent): An acknowledgment by a suspect that such suspect understands, followed closely by a statement, is held to be a waiver.
      • Non-verbal waivers: Nods and shrugs seem to be sufficient, absent coercion.
         • Deputies should, however, strive for a verbal response. Gestures are subject to different interpretations and leave too much room for interpretation.
      • Written waivers: The signing of a written waiver is a good waiver if the suspect is literate.
      • Request to talk to attorney later: A desire to talk to an attorney in the future, while manifesting a willingness to answer questions now without counsel, is a waiver.
   b. If suspect indicates a desire to remain silent and/or see a lawyer before answering questions, all interrogation will cease.
   c. Deputies may question a suspect who originally refused to "waive" whenever the suspect initiates a request to talk.
      • Deputies will re-advice such suspects of their constitutional rights and obtain a waiver before questioning.
I. POLICY
   A. Patrol and Special Operations personnel will conduct a thorough preliminary investigation of, and fully document, each criminal act they on-view or are dispatched to.

II. PROCEDURE
   A. ASSIGNED DEPUTY’S INITIAL RESPONSIBILITIES
      1. The Deputy assigned to the initial response shall be responsible for the appropriate response, coordination, investigation and appropriate conclusion of the investigation unless relieved by an assigned investigator or their immediate supervisor.
      2. If a Deputy is dispatched to a call of a serious or hazardous nature he/she will “stage” and wait for a cover officer to assist them.
      3. The Deputy will take notice of anything that appears to be relevant to the case upon arrival to include, but not limited to:
         a. The condition of the scene/location
         b. Items of evidentiary value
         c. Location of victims/suspects etc.
      4. The Deputy will call for additional resources as necessary to include, but not limited to:
         a. Additional cover units
         b. Specialized assistance such as K-9, Marine Patrol or Air Support Unit
         c. Fire Department, AMR ambulance services
   B. CARE OF VICTIM
      1. The first priority of the Deputy shall be the safety of the victim.
a. The Deputy may need to stay with the victim, during a life-threatening situation and administer emergency first aid until the arrival of medical professionals.

2. In the event that a suspect flees the scene while the victim is being tended to the Deputy will broadcast the following over the radio:
   a. Suspect description and direction of travel
   b. Details as to what crime has occurred (if any), to include any weapon that was used

C. APPREHENSION OF SUSPECTS

1. A primary responsibility of each Deputy is the contact, pursuit and apprehension of suspects.
   a. This responsibility must be weighed against the immediate welfare of the victim(s) and the necessity to conduct a more thorough/systematic investigation.

2. Circumstances to consider when deciding on whether or not to pursue include, but are not limited to, the following:
   a. When the identity of a suspect is known and an immediate pursuit is possible and/or necessary.
      • An immediate pursuit may not be appropriate if the preliminary interview, crime scene protection, or preliminary investigation process would suffer.
   b. When the Deputy is unable to determine a suspect’s identity but may be aware of the suspect’s actual or probable location, an immediate pursuit may be appropriate provided appropriate considerations for the victim(s) and the crime scene have been made.
      • An immediate pursuit and apprehension of the suspect would be appropriate whenever a Deputy determines that a suspect’s behavior, if allowed to continue, would jeopardize the immediate safety of other persons.
   c. Bear in mind that the decision on whether or not to pursue a suspect must be made based upon factual information that is known to or perceived by the Deputy at the time of the incident.
      • Facts unknown at the time cannot be considered in later determining justification for actions taken.

D. INVESTIGATIVE RESPONSIBILITIES

1. After making the above listed considerations, Deputies should attempt to determine the nature of the incident as quickly as possible.

2. Deputies will need to make contact with and interview all parties relevant to the investigation:
   a. Victims
   b. Witnesses
c. Suspects

d. Any other involved parties

3. Deputies will attempt to gather and document as much of the following identifying information as possible:

a. True identification of the person being spoken to

b. Addresses (home and work) and contact numbers of the person being spoken to

c. Physical descriptors of the person being spoken to

d. Account numbers and E-mail addresses of the person spoken to (if applicable)

e. Detailed account of the incident to include:

- What happened (be sure to capture the elements of a criminal act)
- Statements made by suspect(s)
- Full suspect description:
  - Race
  - Sex
  - Height/weight
  - Absence/presence of hair and style, to include color and length
  - Facial hair
  - Glasses
  - Type and color of clothing
  - Scars, marks or tattoos
  - Any unique mannerisms

- Full description of any vehicles that were involved:
  - Make and model
  - Body style
  - Color
  - Any unique features
  - License plate number

- Suspect(s) direction of flight.
- Description of any weapons that were in possession of the suspect(s)
- Likely location of suspect(s) (if known)
- Relationship of suspect to victim
• Any other pertinent information to the incident.

4. Deputies will inspect and identify any potential physical evidence.
   a. Deputies will examine this evidence in an effort to determine if it supports or contradicts any accounts given by involved parties.
   b. Deputies will preserve, process and submit all evidence in accordance with Sheriff’s Office Policy and Procedures.
      • Deputies will recognize that in some cases evidence will need to be processed by specialized personnel:
      • SART nurses
      • Blood withdraw technicians
      • Coroner’s Division personnel
      • Homicide/Investigations personnel
      • Crime Lab personnel
   c. Deputies should photograph the crime scene and any evidence as soon as it becomes practical in relationship to their response and investigation.

E. SECURING AND PROTECTING THE CRIME SCENE
   1. Deputies will secure and protect the scene of the crime as soon as it is practical to do so.
      a. In the event of a major investigation (i.e. homicide, assault with a deadly weapon etc.) Deputies will need to cordon/tape off the crime scene.
      b. Deputies should make the crime scene large enough to avoid having to expand it as the investigation unfolds.
      c. Deputies will evacuate the scene of all unnecessary persons, including police personnel if their duties and responsibilities are not directly related to what is going on in the crime scene, and will control the entry and egress of all persons into and out of the scene.
      d. Deputies will initiate a crime scene log that will be part of the crime report. The log will minimally include:
         • Names of people in the scene when log is started
         • Name of agencies the people belong to, if applicable
         • Reason for the people to be in the scene
         • Time of egress of the people from the scene
         • If more people are summoned into the scene be sure to record their name, agency, serial/employee number, time of arrival, reason for being at the scene, and time of departure.

F. DOCUMENTATION AND REPORT ROUTING
1. Deputies will prepare a written report in accordance with Sheriff’s Office Policies and Procedures.
   a. The report should be prepared and submitted in a timely and efficient manner (preferably prior to the end of their shift especially when an arrest has occurred).

2. The report will contain a full account of what occurred in the incident to include:
   a. Date and time of occurrence
   b. Location of occurrence
   c. Full names, addresses and contact numbers for all persons involved
   d. Full, complete, accurate statement from each involved person
   e. Description of the scene, including any unique or unusual characteristics
   f. Disposition of suspect (if applicable)
   g. Location, collection and disposition of evidence (if applicable)
   h. Medical aid and disposition of victim or any injured party (if applicable)
   i. Any use of force (if applicable)
   j. Itemized list of any loss or damage, to include a full description (if applicable)

3. Deputies will investigate and conduct as much follow up into felony and missing person cases as they possibly can, they will also document all of their efforts in either the original report or a supplemental report.
   a. Deputies will “Refer” all felony and missing person cases to the Investigation Division.

4. In misdemeanor cases the investigative responsibility stays within the Patrol and Special Operations Division. Deputies will conduct a complete investigation, to include all follow-up contacts, themselves.
   a. It may be necessary for a supervisor to assign the follow-up investigation in a misdemeanor case to a different Deputy due to: the original deputy being unavailable, time and shift considerations and other factors as necessary to protect the interests of the investigation.
   b. It will be the responsibility of the assigned Deputy to provide a proper disposition in all misdemeanor cases.
I. POLICY
   A. In recognition of the intent and spirit of State laws, deputies will accept and 
      investigate any missing person report with sensitivity toward the family of the 
      missing person.
      
      All missing persons reports must be completed by the end of the reporting 
      deputy’s shift.

II. PROCEDURE
   A. ACCEPTING REPORTS
      1. Patrol and Special Operations Deputies will accept, without delay, any 
         missing person report, including runaways, regardless of where the 
         missing person resides or was last seen.
         
         a. In cases where a missing person report is taken on behalf of 
            another jurisdiction, within 24-hours notify the jurisdiction 
            where the missing person resides and the place where the 
            missing person was last seen.

   B. SEARCHES
      1. A search will be instituted immediately whenever the following 
         circumstances are present:
         
         a. All juveniles under 18 years of age
         b. Juveniles missing under suspicious or special circumstances
            
            • i.e., foul play suspected, juvenile is suicidal, juvenile is 
            mentally disabled.

      2. For missing persons under 21 but over 18 years of age the Field 
         Supervisor will make an assessment of the reasonable steps to be taken to 
         locate the person.
         
         a. Additional resources can be located in the Field Operations 
3. The assigned deputy will contact the area supervisor and advise him/her of the circumstance.
   a. The supervisor may then authorize/request assistance of special units that may include, but not be limited to, the use of a tracking K9, Search & Rescue, telephonic “ping” of cellular devices, investigations, community volunteers, Office of the Sheriff media outreach/PIO, etc.

C. NOTIFICATIONS

1. A Be On The Lookout (B.O.L.O.) bulletin will be broadcast without delay within the Sheriffs jurisdiction if the missing person is under 21 years of age, or there is evidence that the person is at risk (per 14205 P.C.).

2. The deputy initially taking a missing person report of persons at risk or under 21 years of age will ensure the missing person information is entered into NCIC within two (2) hours of receiving the report.
   a. The NCIC number will be included in the report.

3. Entries into NCIC of missing persons under twenty-one years old will be made no later than two hours of taking the report.

4. Entries into NCIC of missing persons over twenty-one years old will be based on the following circumstances:
   a. Age
   b. Mental condition, medical condition or immediate needs
   c. Possible foul play
   d. Media interest

5. The NCIC number will be included in the report in any case.

6. Deputies will contact Dispatch who will make all entries into NCIC and furnish the deputy with the NCIC number for his/her report.
   a. A copy of the NCIC entry will be attached to the report.

7. Supervisors will review the NCIC entry and the original report to verify the accuracy of the information entered into NCIC and that the entry information is supported in the original report.

D. REPORTING REQUIREMENTS

1. A separate report will be written for each missing/runaway even if they are together or suspected of being together.

2. Patrol and Special Operations sergeants will route copies of missing person reports to Investigation Division for follow-up investigation.

E. LOCATED MISSING/RUNAWAY PERSONS

1. When located by Contra Costa County Sheriff's Office patrol, the patrol deputy will:
   a. Write a supplemental report, requesting Investigations to remove the juvenile from the system.
2. When advised by an outside agency a missing/runaway has been located the patrol deputy will:
   a. Contact the agency and confirm the I.D and status of the missing/runaway.
   b. Write a supplemental report.
   c. Confirm or change NCIC status via the appropriate Dispatch Center.
   d. Cancel any special units summoned - if applicable.

3. If the original report was an outside assist for another agency the deputy will:
   a. Contact the agency and advise them of the person's status
   b. If requested, have the appropriate dispatch center send a confirming tele-type to the agency.

F. CRIME INVOLVEMENT
1. When the missing/runaway person is the victim/suspect in any crime in this county, patrol deputies will:
   a. Advise the area sergeant of the circumstances
   b. Follow procedures in "Stranger Abduction Protocol" if applicable.
   c. Request any assistance needed.
   d. Write the appropriate report.
   e. Make arrests, issue citations, as needed.
I. POLICY
   A. In misdemeanor investigations, the Investigations Division will seek a criminal complaint and arrest warrant whenever an investigation discloses sufficient evidence to identify the perpetrator of a criminal offense.

II. PROCEDURE
   A. OBTAINING CRIMINAL COMPLAINTS
      1. When the misdemeanor investigation is completed and the suspect identified, the Misdemeanor Complaint Detective will, when appropriate, obtain a criminal complaint in accordance with the following procedures:
         a. Misdemeanor-Not in custody
            • Ensure that the investigation is complete to include contact of suspect(s) and deliver report(s) to appropriate District Attorney's Office.
         b. Misdemeanor-In custody
            • Confirm that the suspect(s) is still in custody and wait for complaint from the District Attorney's Office.
            • Upon receipt of complaint, deliver complaint and report(s) to appropriate court and advise jail to process the suspect for court.
         c. Citizen's arrest-In custody
            • Same procedure as misdemeanor in custody.
         d. Citizen's arrest-Not in custody
            • Citizen's arrest(s) involving citation and/or referral for complaint are as follows:
         e. Referral for complaint
• Ensure investigation is complete. Deliver report to appropriate District Attorney's Office.

f. Citation issued
• Deliver citation and report(s) to appropriate District Attorney's Office.

B. SIGNING CRIMINAL COMPLAINTS
1. In all misdemeanor cases in which a complaint has been issued, the Misdemeanor Complaint Detective will sign the criminal complaint and when appropriate, deliver the complaint to the court.

C. OBTAINING SUSPECT(S) BACKGROUND HISTORY
1. The Misdemeanor Complaint Detective will conduct a background history check relative to the suspect's criminal conduct and include such information with the current investigation in the following instances:
   a. All traffic related offenses. (Driver's license and registration information.)
   b. All petty thefts, crimes of violence and weapons charges.
   c. Any case in which a prior conviction would make the current arrest a felony.

D. ADDITIONAL FOLLOW-UP INVESTIGATION
1. When it becomes necessary for additional follow-up investigation, the Misdemeanor Complaint Detective will, when appropriate:
   a. Refer follow-up investigation to the initially assigned/investigating deputy, outlining what follow-up is required.
   b. The initially assigned/investigating deputy will complete the additional requested follow-up investigation in a timely manner and document their efforts in a supplemental report.
   • This report will be turned into their supervisor so it can be routed back to the Misdemeanor Complaint Detective.
   • EXCEPTION: In the event the initially assigned deputy is no longer assigned to the area of occurrence, the request for follow-up will be directed to the appropriate shift supervisor for assignment.
   • Refer follow-up investigation to appropriate shift and area in all phone harassment cases in which the location of the originating telephone calls becomes known and contact of possible suspect(s) is required.

E. INCOMPLETE INVESTIGATIONS
1. In the event a report has been received by the Misdemeanor Complaint Office in which it is apparent that the investigation is incomplete, the
complaint deputy shall refer the report to the initially assigned deputy, outlining the reason(s) for return.

2. The initially assigned/investigating deputy will complete the additional requested investigation in a timely manner and document their efforts in a supplemental report.
   a. This report will be turned into their supervisor so it can be routed back to the Misdemeanor Complaint Detective.

3. When necessary, refer the report to the initially assigned deputy's supervisor for appropriate action, and route it via the Station House Commander/Police Services Manager.

4. Under no circumstances will an incomplete report or investigation be forwarded to the District Attorney's Office for a complaint.

F. ROUTING OF REPORTS:

1. It shall be the responsibility of area supervisors to route all misdemeanor reports in which a criminal complaint will be sought to the complaint deputy.

2. The supervisor routing/signing such report(s) will ensure the following:
   a. Completeness of investigation.
   b. Suspect identity known and contacted.
   c. All witnesses identified and interviewed.
   d. Proper elements of the offense are present.
I. POLICY

A. The Asset Forfeiture policy is established to provide guidance to Sheriff’s Office personnel regarding the seizing of a suspect’s assets, when the assets are related to narcotics trafficking in compliance with Health and Safety section 11469 et seq.

B. Department personnel will adhere to Sheriff’s Office policy and codified California law when considering seizing assets related to narcotic trafficking.

C. The purpose of California’s narcotic asset forfeiture statues (H&S 11469 et seq.) is to liberate operating tools and economic basis from persons directly involved in the illicit drug trade.

D. The principal objective of asset forfeiture is law enforcement.

E. Although civil forfeiture is intended to be remedial, by removing the tools and profits from those engaged in the illicit drug trade, it can have harsh effects on property owners in some circumstances. Therefore, law enforcement shall seek to protect the interests of innocent property owners via due process.

II. DEFINITIONS

A. Forfeiture is the uncompensated taking by the government of property which is illegally used or obtained (C.D. Cal. 1978).

III. PROCEDURE

A. GENERAL RULES

1. Property Considered for Seizure

a. Property subject to seizure includes any conveyances, to include but not limited to automobiles, boats, air craft, or any other vehicle purchased with drug proceeds or used in the facilitation of crimes specified in Health and Safety code section 11470 (e). The minimum value, or equity, of these conveyances should be five thousand dollars before the conveyance will be considered for seizure.
b. All monies, negotiable instruments, securities, or other items of value furnished or intended to be furnished by any person in exchange for a controlled substance as stated in Health and Safety code section 11470 (f). The minimum value in this instance should be five hundred dollars, when considering items for seizure. The five hundred dollar minimum may be met by an aggregate of negotiable items. Smaller amounts of monies and other negotiable instruments, which do not total the minimum or are not being seized, are to be booked as evidence.

c. All raw materials or products and equipment used to manufacture, process deliver import / export any controlled substance in violation of Health and Safety code section 11470 (b).

2. Asset Seizure Authority is outlined in Health and Safety code section 11471 and 11488.

3. Charges – Narcotics Activity Needed for Cash Seizure

Any violation of:

**H&S Codes**

- 11351 – Possession of Heroin, certain prescription drugs or Cocaine Salt (powder) for sale
- 11351.5 – Possession of Cocaine Base (Rock or Crack) for sale
- 11352 – Sales or transportation of drugs outline in H&S 11351
- 11355 – Sell, transport, furnish, administer, or give, in lieu of controlled substance
- 11359 – Possession of Marijuana for sale
- 11360 – Sales, transportation, or furnishing Marijuana
- 11366.8 – Possession or Use of False Compartment for Drugs
- 11378 – Possession of Methamphetamine, LSD, MDMA (Ecstasy, X or Molly), or certain other prescription and non-prescription drugs for sale
- 11378.8 – Possession of Phencyclidine (PCP) for sale
- 11379 – Sales or transportation for sales of drugs outlined in H&S 11378
- 11379.5 – Sales or transportation for sales of PCP
- 11379.6 – Manufacturing or preparing controlled substance
- 11380 – Adult using, soliciting or intimidating minor for drug violation
- 11382 – Transportation in lieu of controlled substance
- 11383 – Possession of precursor chemicals with intent to manufacture

**Penal Code**

- 182 – Conspiracy (when drugs are involved)

B. **GENERAL RESPONSIBILITIES:**

1. Must have a qualifying offense.

2. Contact the District Attorney’s Office (at one of the phone numbers below) and obtain authorization for seizure. They are to be contacted no matter the time of day/night for authorization prior to seizure.
3. If you are unable to contact someone from the D.A.’s Office; take the property as evidence and email SIU Detectives so they are aware that authorization for the seizure still needs to be obtained.

4. Annotate authorizing D.A. representative’s name and time of authorization on the Notice of Seizure form.

5. Fill out Notice of Seizure form. List assets separately.
   
a. For example: Deputy stops a car and arrests the drive for H&S 11351.5 where $2000 is found in the glove compartment and $5000 is found in the trunk. The assets must be listed separately; do not make one entry stating $7000 was found.

6. List the location of where the cash was seized. Be specific; use an actual address. Do not put FOB or Station House as the location of the seizure unless that is where the Deputy was when they found the cash to be seized.

7. Collect and count all U.S. Currency/negotiable instruments (have a witness, deputy or sergeant, present). $500 currency recommended minimum for forfeiture.

8. Place the money/negotiable instrument into a “Cash Inventory Envelope” (tape and tag with evidence card).

9. Provide pink copy of Notice of Seizure form and Claim Opposing Forfeiture form to the person from whom the asset was seized. It is a legal document; refer person to their attorney if they have questions about this form.

10. Place all currency/negotiable instruments into the drop safe in room 123 at FOB. Complete log sheet on top of the safe.

11. All vehicles seized will be towed to [location]. The keys and associated paperwork will be placed into the SIU mailbox in the investigations area.

12. Any other items seized should be booked into property.

13. Notification of any asset seizure shall be made to the SIU supervisor prior to the end of shift via email or telephone call (during business hours).
   
a. SIU is required to bring the case to the District Attorney’s Office within 15 days of the seizure.

b. The arresting deputy needs to ensure the report is written and submitted in a timely manner.
Property Crimes
I. POLICY
   A. Incidents involving lost or stolen bicycles will be handled in the same manner as any other investigation.

II. GENERAL INFORMATION
   A. Deputies should be aware that individuals who suffer a loss consider the matter a personal one, especially if the victim is a child who has lost his bicycle.
   B. The Deputy's actions will make a lasting impression on the child and will have a profound effect on his view of law enforcement.

III. PROCEDURE
   A. FOUND BICYCLES
      1. Deputies assigned details involving found bicycles should follow the procedures set forth in "found property" details.
      2. Status check: The serial number and bicycle license number should be checked to determine if the bicycle has been previously reported as stolen and/or lost.
      3. Return to owner: Should the status check reveal the owner, the deputy may make arrangements to return the bicycle.
         a. Consideration should be given to the owner's place of residence.
   B. LOST BICYCLES
      1. If circumstances indicate that no criminal act (i.e. theft) is involved, the report will be classified as a lost property report.
      2. The Deputy will contact Dispatch to have it entered into CLETS.
         a. (See procedure "Entry into CLETS")
   C. STOLEN BICYCLES
1. Whenever facts are developed to indicate a theft of a bicycle, the proper investigative and reporting procedures will be conducted.
   a. NOTE: If the value of the bicycle does not amount to the value for grand theft, the initially assigned deputy is responsible for follow-up investigation.

D. DESCRIPTION OF BICYCLE
1. Complete descriptions will speed the return of the bicycle if or when it is recovered even if a serial number was not known.
2. A complete and accurate description of the bicycle will be obtained to include the following:
   a. Make, model, type, and model number.
   b. Serial number and license number, if any, and known by victim.
   c. Color, wheel size, frame type (boys/girls).
   d. Seat type/color, handlebars/grip color.
   e. Type of brakes and speeds.
   f. Optional equipment and distinctive markings.
      • This is very important in cases where the serial number is not known.

E. ENTRY INTO THE CALIFORNIA LAW ENFORCEMENT TELECOMMUNICATIONS SYSTEM (C.L.E.T.S.)
1. The assigned deputy will enter all found, lost or stolen bicycles in CLETS and obtain a "file control number" for inclusion in the report.
2. Entry will be made when the serial number is known and will be conducted through Dispatch.
3. A copy of the CLETS entry will be scanned and attached to the original crime report.
4. Supervisors will review the CLETS entry and the original report to verify the accuracy of the information entered into CLETS and that the entry information is supported in the original report.
   a. Exception: In Grand Theft cases, or where the value is $950.00 or more, the entry is done by Investigations Division.

F. STORAGE OF FOUND/RECOVERED BICYCLES
1. All found or recovered bicycles will be properly tagged with a "property record" tag and placed in the area Station House Evidence storage area until they are moved to the Property Room.
   a. Exception: Contract cities may retain all found or recovered bicycles at a location designated by their Police Manager.
   b. NOTE: The property record tag must be complete and accurate in order to identify the reporting party or owner in a timely manner.
G. RETURN TO OWNER

1. In the event the assigned deputy cannot return the bicycle to the owner, any notification or attempt to contact should be noted in the report.

2. Evidence personnel will notify the victim when a bicycle similar to theirs is retrieved or found.
I. POLICY
   A. Patrol and Special Operations Division will respond to the scene of a reported fraud and establish the nature of the incident, protect and collect evidence, and apprehend suspects.

II. GENERAL INFORMATION
   A. Fraudulent document cases normally fall within two broad categories:
      1. True name checks which have been rejected by the bank for one or more reasons; i.e., non-sufficient funds, account closed, return to maker, etc.
   B. Forgery is when a person's signature has been unlawfully affixed to a document.
      1. The document may be a check or other form of conveyance. (Notes, deeds, credit applications, etc.)
      2. Counterfeit documents may also fall within this category.

III. PROCEDURE
   A. TRUE NAME CHECKS
      1. This type of check involves: account closed, non-sufficient funds, and refer-to- maker.
      2. The beat deputy will personally respond to reports of fraudulent documents.
      3. The deputy will determine if the check meets the following criteria:
         a. The check must include:
            • Payee
            • Date
            • Amount
            • Signature
b. The check must include the printed name and address of the checking account owner.

c. The person accepting the check must have taken the following steps in reviewing the check:
   - Recorded the Driver’s license number provided by the presenter.
   - Recorded the Date of birth provided by the presenter.
   - Initialed the check as the person accepting the document.

d. The check must not be pre- or post-dated.

e. The check must meet at least one of the following requirements:
   - It was written in Contra Costa County.
   - It was delivered to an address in Contra Costa County and be drawn on a bank doing business in California.

f. The check should be submitted within 30 days of the date that it was returned unpaid.

4. Unacceptable Documents
a. Two-party checks.
b. Any other document not meeting the criteria within this policy.

5. Reporting procedures
a. The assigned deputy will refer the individual(s) reporting the incident to the Contra Costa County District Attorney Bad Check Program.
b. The assigned deputy will supply the P.R.C. with a Bad Check Program brochure and the District Attorney’s Returned Check Complaint Form.
   - The P.R.C. will then be instructed to follow the instructions of the District Attorney Bad Check Program.

6. Deputies assigned true name check details will not obtain or assign case file numbers nor seize the involved check(s).

B. STOLEN, FORGED AND FICTITIOUS CHECKS
1. Incidents involving checks in this category shall be handled as any other criminal investigation.

2. The assigned deputy will respond to the scene and conduct an appropriate investigation.

3. The involved document will be seized for evidence.
   a. Such document(s) will be preserved for fingerprints or other processing.
   b. The document(s) will be placed into a "Fraudulent Document Envelope" and submitted into evidence.
c. This will be conducted regardless how many persons may have handled the document.

C. ARRESTS INVOLVING CHECKS

1. Deputies assigned details involving "true name checks" or "stolen, forged or fictitious checks" will adhere to the following procedures regarding arrest:
   a. True name checks
      • Deputies who respond to details in which the suspect is still present will not physically arrest the suspect, but rather:
      • Conduct a field interview so as to identify the suspect and obtain enough additional information to support the issuance of a complaint at a later date.
      • If the victim has made a citizen's arrest of the suspect, the citizen’s arrest procedures outlined in chapter 5.3 will be followed. Should the deputy receive the citizen’s arrest, a citation release should be utilized.
   b. Forged checks
      • When the assigned deputy establishes that a suspect at the scene has forged a check, an arrest will be made.
      • A check may be considered as forged whenever the suspect uses the name of another person or the name of a fictitious person with intent to defraud a recipient of the check.
      • Example: Mr. Jones reports his checks were stolen from his mailbox in El Sobrante.
      • Mr. Jones reports this theft to the Sheriff’s Office. The theft from the mail is written with a copy of the report going to the postal inspector and copy to Investigations for information.
      • A few days later Mr. Jones reports to the Sheriff’s Office that he has received a call from a business in Pinole about a check that has bounced.
      • Mr. Jones is instructed by the Sheriff’s Office to tell the business that his checks were stolen, providing the case number.
      • It is now the responsibility of the business where the forged check was passed to contact the law enforcement agency where the business is located, in this example Pinole Police Department.
I. POLICY
   A. Patrol and Special Operations personnel will thoroughly investigate all litter details and will ensure the person responsible for clean-up is aware of the dump.

II. PROCEDURE
   A. GENERAL RESPONSIBILITIES
      1. It shall be the responsibility of the assigned deputy to conduct a thorough investigation to include the issuing of citations when appropriate.
      2. Deputies will conduct a search of a litter dump for evidence.
         a. The deputy should be aware that the responsible individual(s) for the litter may not have dumped it.
         b. Frequently, homeowners hire individuals to remove trash and other debris from their property.
   B. PROBABLE CAUSE FOR CITATION
      1. The punishment for littering is by fine only (classifying the crime as an infraction) so the assigned deputy can issue a citation after establishing probable cause.
   C. RESPONSIBILITY FOR PROPER DISPOSAL
      1. Public property
         a. In the event the littering occurs on public property, a copy of the crime report will be routed to General Services Division for the proper disposal of the litter.
         b. All follow up and final disposition is the responsibility of the originating deputy.
      2. Private Property
a. Litter dumps occurring on private property are the responsibility of the property owner for clean-up.

b. Deputies should be prepared for property owners who may dispute the responsibility for clean-up. Property owners can be advised to consult an attorney.

3. Deputies assigned litter dumps in which the responsible is properly identified may conclude the investigation by having the responsible clean-up of the litter.

4. Deputies should use good judgment and ensure that clean-up is done properly.

D. REPORTING LITTER DUMPS

1. Regardless of the location and/or disposition of a litter detail, the assigned deputy will report the incident on a “crime report,” and is responsible for all follow up investigation.
I. POLICY

A. Motorcycle complaints whether for noise or property damage will be investigated by Patrol and Special Operations Personnel and resolved.

II. PROCEDURE

A. ASSIGNED DEPUTY’S RESPONSIBILITIES

1. Deputies assigned "motorcycle" complaints will take appropriate lawful steps to ensure an equitable and satisfactory disposition to the problem.

2. Adult or juvenile citations may be issued to all trespassers with motor vehicles encountered upon lands "not known to be open to the general public."

3. Citations will be issued in all cases in which the property owner or representative of property owner desires prosecution.

B. ESTABLISHING TRESPASS VIOLATION

1. Frequently, deputies will encounter incidents in which questions arise concerning the aspect, "lands not known to be open to the general public."

2. To establish a "trespass," the following criterion is presented as a guideline:
   a. Lands completely enclosed by fence.
   b. Lands posted with "no trespassing" signs at intervals of three signs per mile around the perimeter of the property and at each recognizable entrance.
   c. The suspect cannot produce written permission from the owner of the land or his agent to utilize his vehicle on the property.

3. In other cases, the deputy must use good judgment in establishing a trespass. Examples of possible circumstances are:
a. If lands are partially posted with "no trespassing" signs in such a location that they would be visible to the trespasser, a citation could be issued.

b. Fenced lands in which signs are posted at gate entrances and would have been visible upon entry, a citation could be issued.

4. Lands that are unfenced or not posted, the burden of proof is still somewhat upon the trespasser if the deputy can establish through circumstantial evidence that the lands are "not known to be open to the general public."

C. PURSUIT OF MOTORCYCLE TRESPASSERS

1. Deputies should avoid pursuit of trespassers on motorcycles.

a. The advantages of a motorcycle in "off road" conditions greatly outweigh a four-wheel patrol unit.

b. Also, pursuit of a trespasser on a motorcycle may cause the rider to attempt unsafe maneuvers increasing the likelihood of injury to himself and possibly to the deputy.

D. EXCESSIVE NOISE COMPLAINTS

1. Complaints received involving excessive noise created by motorcycles or other vehicles will be handled in the following manner:

a. If the complaint involves a trespass follow PROCEDURES 2, 3 and 4.

b. If the complaint involves excessive noise only, proceed as follows for a violation of Section 415 P.C.:

   - Listen to the noise from or near the complainant's residence.
   - Ascertain if the complainant desires prosecution.
   - When prosecution is desired, obtain names and addresses of neighbors for potential witnesses.
   - Apprehend responsible(s) and cite when prosecution is desired and it is established that sufficient noise exists to cause an actual disturbance of the peace.
   - In the event the complainant does not want prosecution, but requests the deputy to contact the responsible(s) and advise of the complaint and noise disturbance, the deputy will conduct the following:
     - Contact responsible(s) and obtain pertinent information for inclusion in the crime report.
     - Provide responsible(s) with "warning notice" form.
I. POLICY

A. Patrol and Special Operations Division will safeguard and properly dispose of all property coming into its custody. Every reasonable effort will be made to return property to its rightful owner.

II. PROCEDURE

A. NON-CRIMINAL PROPERTY

1. Any physical objects which come into the possession of a Patrol or Special Operations member and which are not instruments of a crime, contraband, or evidence are considered to be "non-criminal property."

2. Such property includes found items and items taken into custody for safekeeping.

3. Patrol and Special Operations deputies will perform the following tasks:
   a. Complete a "found report" or a "crime report" if applicable.
   b. Tag the property with a complete property record tag and submit into evidence.
   c. Complete a Found Property/Safekeeping Property form (PF#49), Distribution of this three part NCR form is as follows:
      • Original – Case File copy (scan and attach to report)
      • Pink – Citizen’s copy (also acts as a property receipt, with instructions for claiming property on the back)
      • Yellow – Property Room copy

4. Patrol and Special Operations deputies will make every reasonable effort to locate and return property to its rightful owner.
   a. If the property owner lives within the assigned deputy's beat, the property may be returned.
      • A report is required.
b. Property owners located outside of the assigned deputy’s beat will be notified by telephone (if telephone number is available) of recovery and advised to call Sheriff’s Property, 925-646-5877 between 0800 to 1700 hours, Monday to Friday, excluding holidays to arrange pickup.

5. When a finder of property expresses an interest in such property, the assigned deputy will perform the following tasks:
   a. Direct the citizen’s attention to, the duties of the finder instructions, on the back side of his/her pink copy of the Found/Safekeeping Property Form.
   b. Indicate on the "Property Record" tag and in the report that the finder wishes to claim the property.
      • NOTE: If the finder refuses to sign the "Declaration of Found Property" or the finder has not moved the property or otherwise taken the property into his custody, the finder acquires no right to the property.
      • It is suggested the above procedures for claim of property not be given unless the finder declares an intention to claim the property.

B. BOOKING PROPERTY FOR SAFEKEEPING:

1. Deputies are authorized to take property into custody and submit it into evidence whenever any of the following elements are present:
   a. There is a reasonable indication that a crime may be committed if the property is not taken into custody.
   b. If the circumstances reasonably indicate that the owner is incapable of taking care of the property.

2. Whenever property is taken for safekeeping deputies will:
   a. Complete a crime report indicating the circumstances surrounding the taking of property.
   b. Complete a Found/Safekeeping Property form and give the citizen the pink copy of the form, directing his/her attention to the instructions on the back side of their copy.
      • This form will act as their property receipt as well.

C. DISPOSAL\DESTRUCTION OF PROPERTY:

1. Deputies are authorized to dispose of or destroy and dispose of unclaimed found property that has no evidentiary value, or material value.
   a. "Disposal\destruction" of property should be noted on the property tag when item(s) are submitted to the Property Room for disposition.

2. Property that is "Trash" and has no value as above can be disposed of at the Station House disposal site, or other appropriate location.
3. Any property that may be or have hazardous waste contamination will be handled in accordance with the procedures covering Hazardous Materials in Chapter 7 of this manual.
Contra Costa County Office of the Sheriff
Patrol and Special Operations Division
Policy and Procedure

Crimes vs. Persons
I. POLICY
    A. The Patrol and Special Operations Division has a responsibility to detect, document, and resolve disturbances of the peace occurring within the unincorporated area of the county and the contract cities.
    B. Each deputy has an individual responsibility to conduct appropriate investigations whenever a disturbance of the peace is discovered or otherwise reported.

II. GENERAL INFORMATION
    A. Deputies assigned to incidents involving a disturbance of the peace must remain calm and objective in order to successfully resolve and manage the confused, emotional, and often dangerous situation.
    B. Crucial to a successful response is the deputy's ability to demonstrate neutrality, tact, patience, and investigative thoroughness.

III. PROCEDURE
    A. OFFICER SAFETY
       1. Deputies assigned to disturbance calls will remain aware that police intervention is often viewed by participants as unwarranted and may result in violence directed at arriving deputies.
       2. The following elements will be considered by deputies assigned to respond to the scene of a disturbance:
          a. The nature of the disturbance
             • The degree of threat to a deputy's safety is directly related to the number of people involved and the nature of the disturbance.
             • Deputies and supervisors will assess the situation to determine the appropriate response, personnel, and resources necessary to maintain control.

Deputies and supervisors will assess the situation to determine the appropriate response, personnel, and resources necessary to maintain control.

Supervisors
will continue to monitor the situation and deploy additional personnel and resources as needed.

b. The location

- The deputy will take into consideration the structure or area where the disturbance is occurring in order to determine the approach that will provide maximum safety and control of the situation.

3. Deputies will remain aware that incidents involving a disturbance of the peace are normally accompanied by participants who are emotional, angry, and unconcerned about the consequences of their actions.

B. OFFICER CONDUCT

1. Deputies will convey a calm, positive, determined, objective, and professional image by adhering to the following process when appropriate:

a. Supply information to participant

- Deputies will introduce themselves and explain their presence to participant.
- When necessary, assigned deputies will also explain the law.

b. Display effective attitude

- Deputies will not downplay the incident by belittling the problem or by ridiculing participants.
- A matter-of-fact, business-like attitude is advisable so that participants are made aware that the deputy intends to mitigate the problem and restore the public peace.

c. Maintain effort

- When entry into a dwelling or area is refused, and the disturbance is continuing, deputies may enter to make an arrest if probable cause and the elements of a crime are present.
- When a decision to force entry is made, prior approval from an area supervisor will be obtained and sufficient resources will be allocated to effectively accomplish entrance and arrest.

d. Obtain facts

- Upon arrival at the scene, assigned deputies will be attentive to the conduct and actions of participants.
- When violence is occurring, deputies will, if possible and practical, intervene and take into custody those persons initiating the violence.
- Once calm is restored, deputies will carefully interview those participants directly involved in the disturbance.
• Deputies will avoid taking action until pertinent facts have been obtained from both parties.

• This is crucial to maintaining objectivity and impartiality.

e. Inform parties of limits

• When the facts and/or circumstances fail to establish probable cause for an arrest or otherwise limits the options available, deputies will explain true limits on police authority to participants or other persons demanding action.

2. When an atmosphere of calm is established and facts obtained, the assigned deputy will then perform those tasks required to resolve the conflict or disturbance.

C. TAKING POSITIVE ACTION

1. Deputies assigned will resolve the disturbance and restore the public peace through the use of one or more of the following options:

   a. Mediation

   • Except where the circumstances require an arrest, deputies will attempt to have participants agree to a solution to the dispute.

   • Deputies will remain aware of the important role the participants have in deciding on any solution.

   • A settlement cannot be imposed unless the parties themselves agree that a given solution is acceptable, otherwise any agreement between them will quickly disappear after the deputy is out of their sight.

   • Essentially what is to be sought is recognition by participants of their respective contribution to the problem and a commitment to solve the problem in other ways than by displaying hostility or violence.

   b. Referrals

   • Where outside counseling seems advisable, deputies will carefully consider what the most appropriate referral would be, before suggesting a referral.

   • It is essential that the disputants be referred only to an agency that is equipped to help with the particular problem.

   • When making a referral, the following elements will be considered and employed when appropriate – cost, multiple issues, public or private agencies etc.:

   • Identifying the referral agency
• When making a referral, write down the name of the agency, the address and the telephone number.

• If someone at the agency is known personally, write down his or her name, too.

• Parties are much more likely to take advantage of services offered when they have a specific person to ask for upon their arrival at the agency.

• If there is a choice among agencies, make the referral to the agency or organization closest to the home of the disputants.

• Dissimilar problems
  • Where the disputants or the family has more than one problem and really need the services of a number of agencies, determine the most acute problem and make an appropriate referral for such.

• Arrests
  • There are some situations when there is no reasonable alternative but to arrest; for instance, where there has been a serious assault committed in the deputy's presence.
  • When the action taken warrants, deputies will document all facts surrounding the incident, the statements of the participants or reporting party, and the action taken by the deputy in a crime report.
I. POLICY

A. In cases of domestic violence, deputies shall enforce the laws to protect the victim and shall communicate the attitude that violent behavior in the home will not be tolerated. Arrests will be made when appropriate.

B. It is the policy of the Contra Costa County Office of the Sheriff, that when an officer believes that a person is in immediate and present danger of domestic violence, or a child is in immediate and present danger of child abuse by a family or household member, or child abduction by a parent or relative, based on the allegation of a recent incident of abuse or abduction, or threat of abuse or abduction, the deputy may assist the person in securing an emergency protective order when no other valid court protective order exists.

II. DEFINITIONS

A. Abuse: Intentionally or recklessly causing or attempting to cause bodily injury, or placing another person in reasonable apprehension or imminent serious bodily injury to himself or another.

B. Domestic Violence: Abuse committed against an adult or fully emancipated minor who is a spouse, former spouse, cohabitant, former cohabitant, or a person with whom the suspect has had a child or has had a dating or engagement relationship. Also includes abuse against those closely related to one another by consanguinity or affinity within the second degree.

C. Emergency Protective Order (E.P.O.): An Ex Parte court order prepared by a law enforcement officer and issued by a Judge, Commissioner, or Referee, by the telephone or otherwise, whether or not the Superior Court is in session, when there is immediate and present danger of domestic violence, child abuse, or child abduction. Or that an elder or dependent adult is in immediate and present danger of abuse as defined by Welfare and Institutions section 15610.07, based on an allegation of a recent incident of abuse or threat of abuse by the person.
against whom the order is sought, except that no emergency protective order shall be issued based solely on an allegation of financial abuse.

1. Such an order restrains activity and/or excludes the restrained party from specific locations and/or determines temporary custody of minor children.

2. E.P.O.'s are good until the 5th court day following its issuance and depending on weekends and holidays the order can be in effect for up to seven days.

D. Immediate and Present Danger (As it applies to E.P.O.'s): Reasonable grounds to believe that a person is in danger, based upon the person's allegation of a recent incident of abuse or threat of abuse.

E. Family or Household Member (As it applies to E.P.O.'s, specifically regarding child abuse): Individuals who are related to each other and/or persons who regularly live or who regularly lived in the household.

F. Gun Violence Restraining Orders (GVRO): May be issued if the subject is determined to be an immediate threat to themselves or others, but does not fit the criteria for a W&I 5150 hold. A GVRO may be applied for Ex-Parte by family members, as defined in Penal Code 422.4, or by Law Enforcement. It may also be applied for as a Temporary Emergency Gun Violence Restraining Order by Law Enforcement only. This order, if granted, is in effect for 21-days from issuance.

III. GENERAL INFORMATION

A. A major portion of a deputy’s time is spent on dispute or disturbance calls.

1. Of these calls, domestic disputes and/or violence is frequently encountered.

B. The handling of these types of disputes is often hazardous to the safety of the deputy.

C. Deputies will attempt to arrive at a solution to the problem, which is equitable to the involved parties.

D. A deputy can be detailed to a disturbance and encounter a situation where a husband and wife are in the process of obtaining a divorce, cohabitants are separating, or a family argument is in progress.

E. Deputies also frequently encounter situations involving restraining orders.

F. The following procedures are set forth to enable field deputies to handle situations of this nature.

G. GENERAL GUIDE LINES FOR ENFORCING RESTRAINING ORDERS:

1. MOST COMMON TYPES OF ORDERS
   a. Criminal Protective Order/Criminal Stay Away Order
   b. Emergency Protective Order (E.P.O.)
   c. Domestic Violence Prevention Act
- Pre-hearing: Order to Show Cause and Temporary Restraining Order
- Post-hearing: Restraining Order After Hearing

d. Family Law Restraining Orders
- Pre-hearing: Temporary Restraining Orders/Order to Show Cause
- Post-hearing: Restraining Order After Hearing or Findings and Order After Hearing

e. Gun Violence Restraining Order
- Ex-Parte Gun Violence Restraining Order pre-hearing
- Temporary Emergency Gun Violence Restraining Order pre-hearing by Law Enforcement
- Gun Violence Restraining Order after hearing

2. TIME LIMITS
a. As long as defendant is under court jurisdiction.
b. Emergency Protective Orders (5 court days - up to 7 days depending on weekends and holidays)
c. Domestic Violence Prevention Act
- Until date of hearing
- 3 years maximum
d. Family Law Restraining Orders
- Until date of hearing
- 3 years, generally
e. Gun Violence Restraining Order
- 21 days until hearing
- 1 year if granted by hearing

3. ENFORCEMENT SECTIONS
a. P.C. 136.1 per 136.2 P.C. Violation of Court Order 2, 3, and 4. 166.4 P.C. (General), 273.6 P.C. (Specific)
b. Other: 278.5 P.C. Deprivation of Custody or Right to Visitation of Child

4. WHEN TO ENFORCE
a. Upon communicated confirmation of existence and proof of service.
b. Upon being shown at scene a copy of Order and serving same on defendant.

5. IMPORTANT FACTORS
a. Read the Orders - Determine if Orders were issued before or after hearing.

b. If Orders appear proper on face and in content, don't look for hidden meanings.

c. Never take a petitioner or attorney's word of existence of Orders.

d. If more than one order is presented, and orders are conflicting, enforce the most recent.

IV. PROCEDURE

A. DISTURBANCE CALLS

1. Deputies shall treat all domestic violence as criminal conduct and will respond accordingly.

2. The most critical time for any police officer is approach and entry.

   a. The police rarely have the element of surprise.

   b. Emotions run high and the danger of the situation escalating into a crime of physical violence is great.

   c. The initially assigned deputy is responsible for the proper handling of domestic disputes.

   d. The deputy’s arrival on the scene of a dispute may be viewed as a possible solution by one party, but as an intruder by the other.
5. **Appropriate Action**
   a. Crisis intervention techniques shall not be used in lieu of an arrest where arrest is the most appropriate response unless there exists exigent and extraordinary circumstances.
   b. Crisis intervention techniques may be an appropriate response to domestic dispute incidents.

**B. ARRESTS**

1. The existence of the elements of a crime and/or the willingness of the victim to sign a Citizen's Arrest Form shall be the sole factors that determine the proper method of handling the incident.

2. The following factors, for example, are not to influence the deputy's course of action in domestic violence incidents:
   a. The relationship or marital status of the suspect and the complainant, i.e., not married, separated, or pending divorce.
   b. Whether or not the suspect lives on the premises with the complainant.
   c. The existence or lack of a temporary restraining order.
   d. The potential financial consequence of arrest.
   e. The complainant's history of prior complaints.
   f. Verbal assurances that violence will cease.
g. The complainant's emotional state.

h. The absence of visible injuries.

i. The location of the incident (i.e., public or private).

j. Speculation that the complainant may not follow through with the criminal justice process or that the arrest may not lead to a conviction.

3. Felony Arrest

   a. Make an arrest when there is probable cause to believe that a felony has occurred.

4. Misdemeanor Arrest

   a. Make an arrest when there is probable cause to believe that a misdemeanor (including violations of court orders) has occurred in the officer's presence.

   b. Penal code section 836 sets forth authority for warrantless arrests in domestic violence disputes, either in the presence of the officer or outside his/her presence, under specified conditions:

      • In 1997, the legislature broadened Penal Code Section 836(c)(1), which now specifies that when a peace officer is responding to a call alleging a violation of a domestic violence protective or restraining order issued under the Family Code, Section 527.6 of the Code of Civil Procedure, Section 213.5 of the Welfare and Institutions Code, or Section 136.2 of this code, or of a domestic violence protective or restraining order issued by the court of another state, tribe, or territory and the peace officer has probable cause to believe that the person against whom the order is issued has notice of the order and has committed an act in violation of the order, the officer may arrest the person without a warrant whether or not the violation occurred in the presence of the arresting officer.

      • Per 13701 PC, arrest policies shall require the arrest of an offender, absent exigent circumstances, if there is probable cause to believe that a protective order has been violated.

      • In any case in which a person is arrested for a misdemeanor violation of a protective court order involving domestic violence, the person shall be taken before a magistrate instead of being released on a citation unless the arresting deputy determines there is not a reasonable likelihood that the offense will continue or resume or that the safety of persons or property would be imminently endangered by release of the person arrested.
• Nothing in this subdivision shall be construed to affect a defendant's ability to be released on bail or his or her recognizance. (Section 853.6(a) PC).

• In 1997, the legislature added Penal Code Section 836(d) which specifies that if a person commits an assault or battery upon his or her spouse, a person with whom he or she is cohabiting, the parent of his or her child, or upon a person with whom the suspect currently is having or has previously had an engagement or dating relationship, a peace officer may arrest the person without a warrant where both of the following circumstances apply:

  1. The peace officer has probable cause to believe that the person to be arrested has committed the assault or battery, whether or not it has in fact been committed.

  2. The peace officer makes the arrest as soon as probable cause arises to believe that the person to be arrested has committed the assault or battery, whether or not it has, in fact, been committed.

c. Deputies considering releasing the suspect on a citation shall evaluate the likelihood of a continuing offense (which is one of the statutory conditions under which a field release is not appropriate). Any one of the following may support the likelihood of a continuing offense:

• Whether the suspect has a prior history of arrests or citations involving domestic violence.

• Whether the suspect is violating a criminal court issued stay-away order.

• Whether the suspect has previously violated, or is currently violating, valid temporary restraining orders.

• Whether the suspect has a prior history of other assaulting behavior (e.g., arrest/convictions for battery or aggravated assaults).

• Statements taken from the victim that the suspect has a history of physical abuse towards the victim.

• Statements taken from the victim expressing fear of retaliation or further violence should the suspect be released.

• Information about the suspect’s alcohol or drug abuse, access to weapons, suicide threats or attempts.

• Threats of kidnapping family members, or history of mental illness.

5. Dual Arrests
a. Dual arrests shall be discouraged but not prohibited. (P.C. 13701, as amended effective 7/1/96.)

b. Peace officers shall make reasonable efforts to identify and arrest only the primary aggressor.
   - The primary aggressor is the person determined to be the most significant rather than the first aggressor.
   - In identifying the primary aggressor, the officer shall consider:
     - The intent of the law is to protect victims of domestic violence from continued abuse.
     - The threats creating fear of physical injury.
     - The history of domestic violence between the persons involved.
     - Whether either person involved acted in self-defense.

6. Private Person's Arrest (Citizen's)
   a. Inform the victim of the right to make a private person's arrest when a crime has been committed outside the deputy’s presence and does not meet the requirements for a felony or misdemeanor arrest.
      - Whenever possible, such discussion shall be held out of the presence of the suspect. Accept a private persons arrest if satisfied the arrested is supported by probable cause.
      - Deputies shall not dissuade victims from making a lawful Private Person's Arrest.

7. Temporary Custody of Firearms
   a. California Penal Code Section 18250 authorizes peace officers at the scene of a domestic violence incident involving a threat to human life or a physical assault “to take temporary custody of any firearm or other deadly weapon in plain sight or discovered pursuant to a consensual search as necessary for the protection of the peace officer or other person present.”
   b. Officers are encouraged to exercise their authority to permit maximum protection of persons at the scene of a domestic violence incident.
   c. The main procedural requirements of 12028.5 18250 are summarized as follows:
      - A receipt shall be given to the owner when the weapon is taken into custody (Use Sheriff Office Firearm Receipt, copy attached).
      - The receipt shall:
• Describe the firearm or other deadly weapon.
• List any identification or serial number on the firearm.
• Indicate how the weapon can be recovered. Procedure listed on S.O. Firearm Receipt.

d. The deputy will fill out the Declaration re: Confiscation of Weapons/Deadly Weapons at the scene of the incident or immediately thereafter.
  • The weapon shall be held until the courts make a determination regarding the disposition of the confiscated weapons.

e. Firearms will not be released without authorization from the Investigation Division Misdemeanor Complaints Unit. (Refer to Sheriff's Office Firearm Receipt)

f. When a law enforcement agency has reasonable cause to believe the weapon could be used to endanger the victim, and the weapon is going to be confiscated, the deputy shall advise the owner/person in possession of the weapon, the following:
  • Their weapons are being confiscated pursuant to 12028.5 18250 PC.
  • Within 40 60 days, County Counsel will initiate a petition in Superior Court to determine if the weapon(s) should be returned.
  • At the completion of the incident the deputy will forward/fax a copy of the complete police report, firearm receipt and declaration re: Confiscation of Firearm/Deadly Weapons to Misdemeanor complaints the same day of the seizure.

C. COURT PROTECTIVE ORDERS

1. Temporary Restraining Orders (T.R.O.'s)

2. Temporary Restraining Orders are recorded in the Sheriff’s Office computer system and available to the deputy.

3. Effective dates, service dates, etc.

4. Deputies should also check to see if any and all persons involved have:
   a. Outstanding warrants
   b. Electronic Home Detention
   c. Probation with search clauses
   d. Restrictions on alcohol and/or drug use, movement, times of the day allowed to be away from home or named in recent Emergency Protective Orders.
e. The presence of any of the above may give the deputy an option to solve the immediate situation, and should not be overlooked.

5. The MDC's in the patrol cars should be utilized to get information when possible, in order to lessen the workload on Dispatch and shorten airtime used on the radio.

6. Sheriff's Records maintain a complete file of all restraining orders delivered to them by the courts, county clerks, complainants, etc.
   a. This file is for the use of deputies to verify the order's validity and terms.

7. Verification of Valid Restraining Orders
   a. Whenever a complainant advises of the existence of a restraining order, the deputy should ascertain:
      - Whether a restraining order is on file with the department, or whether complainant has a copy of the restraining order in possession, that was signed by a judge and should have been filed and stamped by the court or county clerk.
      - Whether a restraining order is still valid as to duration/time.
      - Whether the proof of service or prior notice exists or that the defendant was in court when the order was made.
      - The terms of or restrictions imposed by the order.

8. Arrest Criteria and Enforcement Procedures
   a. A violation of a restraining order is a misdemeanor under Penal Code Sections 273.6 (specific), or 166.4 (general).
   b. A deputy may make an arrest when there is probable cause to believe the subject of the restraining/protective order has violated the order, and any of the following conditions is met (P.C. 13701):
      - The existence of a valid order and proof of service on the defendant has been verified by the deputy.
      - The complainant produces a valid copy of the order and proof of service on the defendant.
      - The existence of a valid order has been verified by the deputy; no proof of service is required if the order reflects that the defendant was personally present in court when the order was made.
      - The existence of a valid order has been verified, and there is proof that the defendant has previously been admonished by an officer.
c. When the deputy verifies that a valid restraining order exists, but cannot verify proof of service, or prior knowledge of order by defendant, the deputy should:

- Serve the defendant with a copy of the order, if the plaintiff has an extra copy.
  - Do not take, or serve the defendant with the plaintiff's last-or only-copy.
- If the plaintiff does not have an extra copy that the deputy can serve on the defendant, the deputy should verbally inform the defendant of the order and its specific terms.
- Upon service of the order outside of the court, a law enforcement officer shall advise the respondent to go to the local court to obtain a copy of the order containing the full terms and conditions of the order. (Family Code 6383(g)).
- Advise the defendant that they are now on notice and that a violation of the order will result in arrest.
  - If the defendant continues to violate the order, after being advised of the terms, an arrest should be made.
  - Verbal notification to the respondent of the terms of the order shall be sufficient notice for enforcement of P.C. 136.2, 273.6, and 29825. (Family Code 6383 (e)).

d. If the subject complies after admonishment of the terms, the deputy shall write a report pursuant to Penal Code section 13730 (c) which will include:

- That the subject was admonished/advised of the terms of the order.
- The specific terms of the order.
- The specific terms of the order the subject was advised about.
- The name of the admonishing officer.
- Time and date.

e. The department's copy of the restraining/protective order will be updated to reflect the admonishment information listed above.

f. If the deputy serves the defendant with a copy of the order, the plaintiff shall provide the deputy with a proof of service which the deputy shall complete (Family Code 6383(b)).

- The deputy will return the proof of service to the plaintiff to file with the court.
g. If the deputy serves the defendant with a copy of the order, he/she should state in the crime report that service was made, attach a copy of the restraining order to the report, and forward a copy of the entire report to Records, Restraining Order File.

h. Whenever any service is made (verbal or otherwise), Sheriff's Records needs to be notified in order to update the restraining order file (Family Code 6380 (e)).
   - If the plaintiff does not provide a proof of service, the law enforcement officer's report will act as such until one is filed.

i. If the defendant has left the scene of the incident, an investigation shall be made to determine if a crime has been committed.
   - Penal Code Section 13730 (c) and 13701 (c)(8) require that a retrievable report shall be made and complainant shall be advised of the follow-up criminal procedure and case number of the report.

9. Order Not Verifiable

a. When the victim is not in possession of the restraining order and/or in the case of a computer or a filing error, deputies may not be able to confirm an order's validity.

b. When an order is not verifiable through the verification procedures, deputies should advise the victim of the right to make a private person's (citizen's) arrest for the appropriate violation.
   - See guidelines for enforcing restraining orders attached at the end of this policy and procedure section.
   - Assist the victim in obtaining an Emergency Protective Order, if appropriate.

D. CRITERIA FOR OBTAINING EMERGENCY PROTECTIVE ORDER

1. Emergency protective orders are available at all times, whether or not court is in session. (Family Code 6241)

E. If the deputy has reasonable grounds to believe a person is in immediate and present danger of domestic violence, or a child is in immediate and present danger of abuse by a family or household member, or abduction by a parent or relative, or that an elder or dependent adult is in immediate and present danger of abuse as defined by Welfare and Institutions section 15610.07, based on an allegation of a recent incident of abuse or threat of abuse by the person against whom the order is sought, except that no emergency protective order shall be issued based solely on an allegation of financial abuse.

1. The deputy should inform the complainant as to the availability of Emergency Protective Orders.

2. Regardless of the victim's preference, the deputy may request an Ex Parte Emergency Protective Order from the on-call judicial officer.
a. A deputy will make this determination based on the applicant's allegation of a recent incident of abuse or abduction or threat of abuse or abduction.

3. The availability of an Emergency Protective Order shall not be affected by the fact that the endangered person has vacated the household to avoid abuse. (Family Code 6254)

4. The deputy may request an Emergency Protective Order whether or not the suspect is present or has been arrested.

5. A crime does not have to be committed for an E.P.O. to be issued.

6. The following are examples of situations in which requesting an Emergency Protective Order may be appropriate:
   a. The suspect is being arrested for a charge related to a domestic violence incident.
   b. The suspect has a history of domestic violence.
   c. The victim expresses fear of retaliation or further violence.
   d. Threats of serious danger have been made to the victim or to the victim's family.
   e. If the applicant requests the order include a "move-out immediately" provision, the deputy should verify that the applicant has lawful possession of the address named through marriage, rental agreement, or receipts, etc.

F. REQUESTS FOR EMERGENCY PROTECTIVE ORDER

1. Supervisor approval is required prior to contacting the on-call judicial officer.

2. The deputy shall contact the on-call judicial officer by telephone or otherwise and assert the grounds for belief that an Emergency Protective Order is appropriate.
   a. Daytime (during court hours)
      • Call the Superior Court Family Law Legal Technicians.
      • Identify yourself by name and agency and advise them you are requesting an EPO.
      • Provide the legal technicians with the basic information they need.
      • The legal technicians will locate an available judicial officer to talk with you.
   b. Evening and Weekends
      • Contact the on-call judicial officer by telephone.
      • The on-call list is available at each station house or contract police department and in the dispatch center.
3. If the telephone call is to be made from any location other than a police department, or Sheriff's Office Substation, place the call through dispatch.
   a. This precaution is to prevent the telephone number of the judicial officer or legal technicians from appearing on the telephone bill of one of the parties.

4. Upon oral issuance of the order by the on-call judicial officer, the Emergency Protective Order form shall be completed as per the Judicial Officer’s instructions regarding restraint, and/or temporary custody.

5. The deputy shall sign the Emergency Protective Order.

G. ISSUED ORDERS

1. The deputy who requested the Emergency Protective Order shall:
   a. Provide a copy of the order to the protected party.
   b. Advise the protected party when the order will expire.
   c. Explain how to secure a permanent Restraining Order.
   d. Serve a copy of the order on the restrained party, if the party can be reasonably located.
   e. Carry a copy of the order until the end of shift.
   f. Advise the relieving shift and deliver a copy to the appropriate beat board at the end of shift.

2. When a violation of any Emergency Protective Order has occurred, the deputy shall verify the restrained party has been served, then arrest in accordance with all other restraining order procedures.
   a. A law enforcement officer, acting pursuant to Section 546 CCP, shall not be held civil or criminally liable if he or she acted in good faith in requesting and enforcing an Emergency Protective Order.

3. Deliver a copy of the Emergency Protective Order to the Records Bureau by:
   a. Attaching a copy to your Police report.
   b. Faxing a copy to the Records Bureau at 335-1589

4. Upon expiration of the Emergency Protective Order:
   a. The Support Services Bureau Records Clerk's copy shall be mailed, by Records personnel, to the Superior Court of Contra Costa County at 500 Court Street, Martinez, CA 94553.

H. TENANCY

1. Request a person who is not in lawful possession of the premises to leave the premises when:
   a. The complainant is in lawful possession of the premises; and, the complainant has requested that the person leave the premises.
• Arrest the suspect under Penal Code 602.5 if the suspect does not leave upon request.

b. The deputy should refer the complainant for a temporary restraining order or other appropriate civil remedy if the complainant requesting removal cannot show proof of lawful possession.

• NOTE: "Lawful possession" of the premises can be shown by a rental agreement, canceled rent check, lease, grant deed, verification from landlord, court order, or other documentation.

I. VICTIM ASSISTANCE

1. Assist in obtaining appropriate medical attention if the victim claims injury whether visible or not.

2. Assist in making arrangements to transport the victim to an alternate shelter, if the victim expresses a concern for safety or the deputy determines need exists.

3. Stand-by for a reasonable amount of time when a complainant requests police assistance while removing essential items of personal property.

4. Explain legal options available to the victim, including the private person's arrest procedures, temporary restraining orders, and in case of arrest, or if the victim is going to seek a complaint, the follow-up procedures and ensuing criminal proceedings.

5. Advise the victim of available community resources and the State Victim Assistance Program.

6. Give the victim a completed Marsy’s Law (California Attorney General’s Office – Marsy’s Card and Resources) pamphlet with an explanation of its use to access the Victim/Witness Assistance Program.

7. Give the victim a Domestic Violence Resource Pamphlet properly documented with the case file number for the incident and use the pamphlet to explain to the victim their legal options and to advise the victim of the community resources available to them.

J. REPORTING

1. Write a report in all cases of Domestic Violence, all cases involving Restraining Orders and any Property Exchange.

   a. In addition to the crime report, deputies shall complete a Domestic Violence Supplemental Report and submit one with every Domestic Violence related report.

   • Identify any Domestic Violence report as such by filling in the D.V. box located on the top right side of each Sheriff's Office crime report form. (13730(c)).

2. State in the report:

   a. Whether or not weapons were involved. (13730 PC)
b. Whether there were any signs the alleged abuser was under the influence of alcohol or a controlled substance. (13730 PC)

c. Whether there are prior reports of domestic violence at the same address involving the same alleged abuser or victim. (13730 PC)

d. Whether the victim states there is a history of prior violent acts.

e. Whether a child was present and witnessed the violence.

3. Provide the victim with the case file number in cases of domestic violence and cases involving restraining orders.

a. The case file number should be written on a Domestic Violence Pamphlet and the pamphlet should be given the victim.

4. If the deputy serves the defendant with a copy of the order, the deputy will document the following in his/her report:

a. That the defendant was served with a copy of the order.

b. The filed date and the case number of the order.

c. The deputy that served the defendant.

d. The date, time and location where the defendant was served.

5. If the deputy verbally puts the defendant on notice that an order exists and advises them of the specific terms of the order the deputy will document the following in his report:

a. That the defendant was put on notice that the order existed.

b. The order's specific terms that the defendant was advised of.

c. The deputy that put the defendant on notice.

d. The date, time and location where the defendant was advised.

6. Advise Records, as soon as possible, by land-wire that the defendant was served with a copy of the order or was verbally advised of the specific terms of the order, for entry into the D.V.R.O. system.

NOTE: EXERCISE REASONABLE CARE FOR THE SAFETY OF DEPUTIES AND PARTIES INVOLVED AND NO PROVISION OF THIS GUIDELINE SHALL SUPERSEDE THAT RESPONSIBILITY.

K. DOMESTIC VIOLENCE PHOTOGRAPHS

1. Deputies should take photographs of the involved parties, the scene and any other evidence at a domestic violence detail. The photos should be attached to the report electronically. The District Attorney’s Office will use these photos to assist them in deciding how to file charges, if any, in the matter.

2. Digital photographs will be taken and submitted in accordance with CCCSO Policy 1.06.36 – Digital Photography.
V. PROCEDURE II
A. GUN VIOLENCE RESTRAINING ORDERS

1. Temporary Emergency GVRO

   a. Deputies will determine if there is reasonable cause to believe that a person poses an immediate and present danger of injury to him/herself or others by having a firearm in their possession and less restrictive alternatives have been ineffective, inadequate, or inappropriate as defined in Penal Code 18125.

   b. If reasonable cause exists, deputies will contact the courts during business hours or the On-Call Judge after hours and request the EPO GVRO be granted.

   c. If the request is granted by a judge, the GVRO will be served and the restrained person be given the opportunity to comply with the order.

      • This order is effective for 21 days from the date of issuance.

      • Once served with a Temporary Emergency GVRO (Form EPO-002 – Firearms Emergency Protective Order), the restrained person must immediately surrender the firearms and ammunition to deputies on scene.

   d. If the restrained person does not comply with the order after being properly served, a search warrant must be obtained prior to searching or forcibly seizing the firearms and ammunition.

      • Firearms and ammunition not owned by the restrained person may not be seized.

      • These firearms and ammunition must be stored so that the prohibited person does not have access to them.

   e. Failing to comply with the EPO GVRO by the restrained person is a violation of PC18205 which is a misdemeanor.

   f. The subject will be given a receipt for firearms or ammunition seized.

   g. The Firearms Emergency Protective Order shall be entered into the system by Records in the same manner as a Domestic Violence EPO and a copy routed to Records.

   h. A copy of the Firearms Emergency Protective Order and report documenting the incident will be sent to Misdemeanor Complaints for follow up.

   i. Seizure of firearms and ammunition is not mandatory if the criteria is not met Penal Code 18109.

   j. A person knowingly making false statements while filing an EPO GVRO petition is a violation of PC 18200 and is also a misdemeanor.

B. Ex-Parte GVRO:
1. Immediate family members, as defined in PC 422.4, or any peace officer may request an Ex-Parte GVRO during normal business hours from any Superior Court.

2. Those seeking the Ex-Parte GVRO, family members of the subject or Investigations, must complete forms GV-109 and GV-110 which includes an affidavit to support their petition to establish the grounds for the petition. The court will consider the following types of evidence in making their decision:
   - A recent threat of violence or act of violence directed at another in the last six months.
   - A recent threat of violence or act of violence toward themselves.
   - Any recent violation of a protective order of any kind.
   - Any conviction of a violent offense.
   - Any pattern of violent acts or threats within the past twelve months.

3. After the Ex-Parte GVRO is granted by the Courts it must be served in the same manner as any other Restraining Order.
   - If served by another party, the restrained person has up to 24-hours to turn in firearms and ammunition to either law enforcement or a licensed gun dealer if the firearms and ammunition is not immediately requested by deputies.

4. The subject turning in firearms to a licensed gun dealer or law enforcement must have a GV-800 form completed by the recipient taking possession of the firearms and ammunition. The GV-800 form must be returned to the Court within 24-hours of being served or the next business day following a weekend or holiday.

5. Should the subject refuse to turn over firearms and ammunition in their possession he/she will be in violation of PC 18205. A search warrant must be authored prior to seizing the firearms and ammunition.

6. Patrol and Special Operations Divisions will assist in the service of Ex-Parte GVRO’s when requested.
a. If the Sheriff’s Office becomes involved with the service of an Ex-Parte order, the 24-hour rule will not be utilized.

b. For safety concerns, Sheriff’s Office representatives will request the immediate surrender of firearms and ammunition from the restrained subject.
   
   * Temporary Emergency GVRO procedures will be followed.

c. The subject will be given a receipt for firearms or ammunition seized.

d. A copy of the Ex-Parte order and report documenting the incident shall be forwarded to Misdemeanor Complaints for follow up.
I. POLICY
A. Patrol and Special Operations personnel will respond to robbery cases in a manner consistent with officer and public safety.
B. They will care for injured persons, determine the nature of the incident, protect and collect evidence, and when appropriate, detain suspects.

II. PROCEDURE
A. RESPONSE TO REPORTED ROBBERY
   1. Deputies assigned to respond to the scene of a robbery incident will act in accordance with Patrol and Special Operations Division Policy 3.02.02, Patrol Response and Investigations.
B. INITIAL RESPONSIBILITY
   1. The person receiving the initial report of a robbery will ascertain the address of the incident and, while maintaining contact with the reporting party, ensure that Patrol vehicles are immediately dispatched to the scene.
   2. The person receiving the initial report will then obtain the following additional information as quickly as possible:
      a. Description of suspects
      b. Weapons involved
      c. Vehicles involved
      d. Suspect’s direction of travel
      e. Elements of crime
      f. Time of occurrence
g. Any unique, unusual, or dangerous conditions that may exist, such as lookouts or emotional condition of the suspect that may endanger responding deputies or citizens.

3. Any additional information obtained will be broadcast immediately by Communications to units responding to the scene, and a request for Code 666 will be made if the suspects fled the scene in a vehicle within fifteen minutes of the initial report.

C. ASSIGNMENT AND RESPONSIBILITY OF UNITS

1. When the robbery is not in progress, one Patrol unit will be assigned to the scene and will then perform the following tasks:
   a. Approach the area with caution since the suspect may still be in the area with special consideration given to the time frame of the robbery and vehicles leaving the area.
   b. Check on the welfare of the victim(s) and, if necessary, provide first aid and arrange for further medical treatment.
   c. Obtain a brief description of the suspect(s), vehicle involved, direction of travel and the time element involved.
   d. Immediately broadcast the information obtained.

2. The deputy assigned to the scene will then conduct a preliminary investigation in accordance with established “investigative procedures.”
   a. Scene evidence processing, to include DNA swabs, is the responsibility of the investigating deputy, unless the Crime Lab is called out.

3. When the robbery is in progress or information indicates that the suspect(s) is in the area, a __________ will be assigned to respond to the scene; and upon arrival, they will perform the following tasks:
D. AREA SEARCH

1. When the robbery is not in progress and the suspect has recently left the scene, the location of the crime will be the center for sectioning off the search area.

2. Assigned cars will not converge on the scene, but will work out from the scene based on the knowledge of the area, elapsed time from the occurrence and the suspect’s means of travel.

3. Units not involved in the area search will take positions at major intersections or along arterial routes that may be used for escape.
G. RECORDING VICTIM WHEN BUSINESS INVOLVED

1. When the incident involves a business, the name of the business will be listed as Victim #1 on the crime report, A page.

2. Individuals working at the business or customers of the business whose personal items or money were taken will be listed as subsequent victims (Victim 2, 3, and so forth).
   a. A Marsy’s Law (California Attorney General’s Office – Marsy’s Card and Resources) pamphlet shall be completed and given to the victim with an explanation of its use

H. PROCESSING THE SCENE

1. Unless circumstances warrant the use of Criminalist personnel, the assigned deputy will be responsible for processing the scene for physical evidence.
   a. This includes but is not limited to any video, still photographs, fingerprinting, DNA swabs, etc.
I. POLICY
   A. Deputies assigned to a sexual assault incident will remain sensitive to the victim’s emotional trauma and will conduct the investigation in a sensitive manner.
   B. Deputies are to identify, locate, and arrest any person reasonably believed to have committed a sexual assault.

II. GENERAL INFORMATION
   A. For the purposes of this manual, sexual assaults are comprised of the following criminal acts:
      1. Rape
      2. Child Molest
      3. Sodomy
      4. Lewd and lascivious act with child/children
      5. Forced oral copulation
      6. Incest
      7. Unlawful intercourse
      8. Sexual assaults on animals
      9. Sexual battery
     10. Sexual exploitation
     11. Assault to commit sexual act
     12. Penetration with a foreign object

III. DEFINITIONS
A. S.A.R.T. The Sexual Assault Response Team, commonly referred to as SART are specially trained nurses who will respond to CCCRMC and assist in the investigation of a sexual assault by collecting physical evidence from the victim.

IV. PROCEDURE
A. INITIAL STATEMENTS
1. The Deputy initially assigned to respond to a sexual assault victim’s location will ensure that medical care is provided to a victim when necessary.
2. Deputies will then conduct a brief interview of the victim and witnesses to obtain the following information:
   a. The circumstances that establish the elements of a criminal act.
   b. Complete description of the suspect(s), the suspect(s)’ vehicle, and if known, the suspect(s) location.
   c. Relationship of suspect(s) to victim.
   d. Time, place, and location of the incident.
   e. When appropriate, the Deputy initially assigned will ensure that the information obtained is immediately broadcast to other field units and subsequently recorded in the crime report. Deputies should avoid using the radio to broadcast information related to the victim’s identity.
   - *If victim is a child, limit the interview to establishing the elements of the crime.

B. SUBSEQUENT STATEMENTS
1. The Deputy initially assigned will determine if the victim’s emotional or physical condition dictates that the interview should take place at a later time.
2. When a further interview is possible, deputies will obtain the following information:
C. INVESTIGATION NOTIFICATION

1. In any sexual assault where the victim and suspect do not know each other, i.e.; stranger rape, in home invasion rape or stranger abduction rape, the on-call investigator will be notified.

D. PRESERVING EVIDENCE

1. Deputies at the scene of a sexual assault shall ensure that evidence at the scene is not disturbed and that the victim does not unintentionally destroy evidence.

2. In the interest of preserving and collecting the best evidence, the Deputy will inform the victim and suspect to refrain from eating, drinking (even water), washing, changing clothes or using the bathroom until after the sexual assault exam has been completed at the hospital.
F. MEDICAL EXAMINATION

1. The first priority in responding to a sexual assault is rendering emergency medical aid to the victim regardless of age.
   a. This aid can be given at a medical emergency or trauma center closest to where the victim is located.

2. The second consideration is evidence preservation and collection.

3. A SART RN will examine adults.
   a. SART will respond to JMMC Trauma unit if necessary.
   b. The hospital cannot refuse medical treatment of the victim but can refuse to collect physical evidence.
d. Parent/Guardian Does Not Consent
   • When a parent or guardian refuses consent, the examination will not be performed.
   • Note: When a parent or guardian is a suspect in the sexual assault prompting the examination, no consent is necessary.
   • If the Deputy takes custody of the child victim pursuant to Section 300 W&I Code (no parent control, unfit home, etc.), consent will be implied and the examination will be conducted.

5. Authorization to Transport
   a. Deputies will obtain permission from the area supervisor prior to transporting a victim and family member/friend to the hospital.

G. RAPE EVIDENCE KIT
1. SART kits are kept by the RN. Once completed RN will notify dispatch.
2. Steps to completing SART evidence:
   a. The collecting Deputy will sign the document the required forms and complete an evidence card for each item.
   b. Attach the Medical Examination Report to the outside of the SART Kit.
c. Submit a copy of the Medical Exam Report with the original crime report.

f. Leave in the Lab, once proper notifications to the Crime Lab has been made.

g. Kits will be picked up by the Crime Lab personnel from the downtown lab as soon as possible after collection.

h. If a victim declines consent to a SART exam, it will be appropriately documented in the crime report.

3. Arrested Suspects
   a. When a suspect is arrested, the Deputy should collect a suspect sexual assault kit.
   b. Kits are stored at the MDF in Intake in the cabinet near the Intake Medical Exam Room
   c. The key to the cabinet is on the Intake Deputy key ring.
   d. Instructions for the collection of evidence are included in the sexual assault kit.
   e. If necessary, the Crime Lab will provide assistance and instruction via phone regarding completing the kit.
   f. Book the kit into Concord Evidence.

H. VICTIM ADVOCATE AGENCIES
   1. In sexual assault cases, deputies should provide a victim with information regarding Services and the location of Rape Crisis Centers.
   2. A Marsy’s Law (California Attorney General’s Office – Marsy’s Card and Resources) pamphlet shall be completed and given to the victim with an explanation of its use.
   3. Deputies should not hesitate to request assistance from personnel associated with these centers during the interview and medical examination process.

I. TEDDY BEARS
   1. Teddy Bears have been placed in all patrol cars and can be given to any traumatized child.
I. POLICY

A. When Patrol and Special Operations personnel detect vice and narcotic activity they will investigate, enforce the appropriate laws and document the incidents.

II. PROCEDURE

A. VICE CASES

1. Deputies are directed to investigate and report all violations of vice laws including gambling, bookmaking, alcohol beverage control and prostitution.

2. Arrests will normally be made in all instances in which a deputy reasonably believes that the person to be arrested is guilty of a violation and there is sufficient evidence to warrant the arrest.

3. When the violation is occurring inside a dwelling or other closed area the deputy discovering the violation will assess the circumstances and determine if the services of the Vice Unit are appropriate.

4. Circumstances to be assessed are as follows:

   a. Destruction of Evidence
      • If the circumstances indicate that entry into a dwelling or closed area by uniformed officers would result in the destruction of evidence, or require the obtaining of a search warrant the services of non-uniformed Vice Unit personnel is appropriate.

   b. Development of Further Suspects
      • When the circumstances reasonably indicate that the use of Vice Unit personnel would enhance the ability to develop further suspects, the use of non-uniformed Vice Unit personnel is appropriate.

   c. Development of Further Evidence
• When the incident is complex and requires the development of documented evidence uncovered over a period of time, or involves repeated contact with a suspect or informant in order to develop such evidence, then the use of non-uniformed Vice Unit personnel is appropriate.

B. NOTIFICATION OF VICE UNIT
1. When a deputy determines that the use of Vice Unit personnel is warranted, the deputy discovering the violation will notify the Vice Unit by initiating a crime report, which should include the following information:
   a. General location
      • Deputies will record the location of the violation by indicating the address and/or cross streets and description of the dwelling or area involved.
   b. Particular Location and Peculiarities
      • Deputies will indicate the particular part of the building or area where the violation(s) occur; such as the rear storage area of a business. Deputies will also indicate any peculiarities, obstacles, or impediments to entry, which may endanger investigating officers or otherwise hamper an investigation.
   c. Nature of the Violation
      • Deputies will explain the nature of the acts that constitute the violation and supply the appropriate code name and section number violated.
   d. Time Element
      • Deputies will record the time of the day and weekday during which the violation usually occurs.
   e. Method of Discovery
      • Deputies will indicate how the violation was discovered.
      • When the discovery was based on an informant, deputies will indicate the name of such informant unless the informing person requested confidentiality and/or respecting this confidentiality would ensure obtaining further information.
      • EXCEPTION: When an informant's testimony is crucial to a case or mandated by magistrate, the identity of an informant will be disclosed to the District Attorney handling the case.
   f. Miscellaneous Information
      • Other pertinent information such as passwords, introduction cards, or the names of participants should
be indicated as long as the uniformed deputy obtaining such information does not arouse the suspicions of the violators and thereby adversely affect any further investigation.

2. Deputies will not hesitate to report any suspected violation of vice laws.
   a. When the information obtained is only fragmentary, deputies should report such information to the Vice Unit Sergeant via email.

C. DISORDERLY HOUSES
   1. The Vice Unit also has the responsibility to monitor the activities of card rooms and bars in the unincorporated area of the County and the contract cities.
   2. Incidents occurring at such locations are to be documented on a crime report and a copy routed to the Vice Unit.

D. NARCOTICS ACTIVITY
   1. Incidents involving suspected narcotics trafficking and related activity shall be reported in the same manner as vice related activity.
   2. They will be documented on a crime report form and a copy routed to the narcotics unit.

E. EVIDENCE DISPOSITION
   1. Evidence collected will be handled according to Sheriff's Office Policy and Procedures Manual section 1.06.35.
I. POLICY
   A. Patrol members, as mandated by state law, will participate in the state "Victims of Violent Crime Program" by informing qualified persons of the availability and provisions of the program.

II. GENERAL INFORMATION
   A. VICTIMS OF VIOLENT CRIME PROGRAM
      1. The State of California has appropriated funds for compensating "victims of violent crimes" and "good Samaritans" who render assistance in crimes for their unreimbursed medical expenses, wage loss, or other expenses incurred as a result of injury, including benefits to survivors of those killed.
      2. The claims are adjudicated by the State Board of Control upon the recommendations of the Attorney General at public hearings.
      3. The claimant need not personally appear, and claims may be honored even in cases where there is not successful prosecution.
      4. Patrol and Special Operations members need not be concerned with establishing the eligibility of a victim.
         a. The legitimacy of a potential claim will ultimately be determined by the State Board of Control in conjunction with recommendations and investigation by the Attorney General's Office.
      5. A victim of a violent crime is defined as any person who sustains physical injury as a direct result of any public offense.
         a. The law excludes vehicle accidents under normal circumstances, but includes assaults with motor vehicles or injuries sustained as a result of any hit-run collision or incident involving driving under the influence of alcohol or drugs.
         b. Victims also include dependents of those so injured.
Marsy's Law, the California Victims' Bill of Rights Act of 2008, is an Amendment to the state's Constitution and certain Penal Code sections enacted by voters through the initiative process in the November 2008 general election. The Act protects and expands the legal rights of victims of crime to include 17 rights in the judicial process, including the right to legal standing, protection from the defendant, notification of all court proceedings, and restitution, as well as granting parole boards far greater powers to deny inmates parole.

III. PROCEDURE

A. NOTIFICATION

1. Any deputy responsible for the initial preliminary investigation of any criminal activity shall notify physically injured victims of the Victims of Violent Crime Program and provide them with a Marsy’s Law (California Attorney General’s Office – Marsy’s Card and Resources) pamphlet. The pamphlet shall be completed and given to the victim with an explanation of its use.

   a. When a deputy is unable to directly supply such notification (i.e., unconscious person), either the next of kin will be notified or the completed pamphlet will be placed within the victim's personal effects.

2. Additional information on all Crime Victim Programs within California can be obtained by calling the Victims of Crime Resource Center, Sacramento, California 1-800-VICTIMS.

3. When notification cannot be made in concert with the preliminary investigation, the deputy assigned to report the incident will indicate what effort was made
I. POLICY

A. When notified that a bombing, bomb threat, or other explosive or dangerous device has been placed in or around a dwelling or business, patrol members will respond with sufficient available resources to control the incident and protect life and property.

B. Such response will be coordinated so that Patrol actions are effective and ensure the problem is resolved and order restored.

C. When responding to an incident of this nature, Sheriff’s personnel will take into consideration the possibility of a secondary device when setting up the incident command post or staging area.

D. This policy is designed for facilities not owned or operated by the Office of the Sheriff. For bomb related incidents involving an Office of the Sheriff facility, see Office of the Sheriff Policy and Procedures Manual Section 1.06.23.

II. PROCEDURE

A. [...]
B. INCIDENTS INVOLVING ACTUAL BOMBINGS

1. Response to the Scene
   a. Dependent upon the information received, the assigned unit may respond Code 2 or Code 3.
   b. The appropriate field supervisor will also respond to the scene and assume responsibility of incident commander and oversee the initial investigation.

2. Incident Commander
   a. Once verification is received of an actual bombing, the incident commander shall notify the following:
      - Investigation Division
        - During normal business hours (0800-1700, Monday to Friday) the appropriate Investigation personnel will be contacted.
        - During non-business hours, the "on-call" Investigation personnel will be notified.
      - Crime Laboratory
During normal business hours (0800-1700, Monday to Friday), the appropriate crime scene technician will be contacted.

During non-business hours, the criminalist "on-call" will be notified.

- Federal Bureau of Investigation
  - In the event the bombing or attempted bombing may be a terrorist related incident, the F.B.I. will be notified for assistance.
  - During normal business hours (0800-1700 hours, Monday to Friday) call Oakland office, [redacted]
  - During non-business hours, agent on duty, San Francisco office, [redacted]

- Bomb Disposal Unit(s)
  - The Walnut Creek, Bomb Disposal Unit, [redacted], will be notified in the event an unexploded device(s) is located.

3. Initial Responsibilities at the Scene
   a. The assigned unit will assume responsibility of the scene.
   b. The responsibilities will be the same as that of any other major felony investigation.

4. Investigation Personnel
   a. Upon arrival of assigned investigators, they will assume command of the investigation. Overall operational command will remain with the Incident Commander.
   b. Field units will assist as directed.

C. INCIDENTS INVOLVING EXPLOSIVES AND EXPLOSIVE DEVICES

1. [Redacted]
**I. POLICY**

A. Reports of elder abuse will be documented completely and an investigation will be conducted to ensure the most comprehensive report possible.

B. Deputies will be aware of the poor credibility factors of an elder abuse victim and will make every effort to obtain corroborating evidence.

C. Supervisors will ensure that all Elder Abuse and Dependent Adult Abuse cases are routed to Contra Costa County Adult Protective Services.

**II. DEFINITIONS**

A. Elder: Any person who is 65 years old or older.

B. Dependent Adult: A person between 18 years old and 64 years old who, because of any mental disability due to birth defect, physical disorder or advanced age, is unable to properly provide for his or her own personal needs.

C. Physical Abuse: Any physical pain or injury that is willfully inflicted upon a dependent adult or elder. This includes, but is not limited to, direct beating, sexual assault or unreasonable physical restraint.

D. Financial Abuse: Any theft or misuse of an elder's money or property, by a relative or person in a position of trust with an elder.

E. Psychological, emotional abuse: The infliction of unjustifiable mental suffering. Examples of such abuse are: verbal assaults, threats, instilling fear, humiliation, intimidation, or isolation of an elder.

F. Neglect: The failure of any person having the care or custody of an elder to provide that degree of care that a reasonable person in a like position would provide. This includes, but is not limited to:

1. Prolonged deprivation of food or water.

2. Failure to assist in personal hygiene or the provision of clothing for an elder.
3. Failure to provide medical care for the physical and mental health needs of the elder, this does not include instances in which an elder refuses treatment.

4. Failure to protect an elder from health and safety hazards.

G. Self-Neglect: Failure to provide for self through inattention or dissipation, The identification of this type of case depends on the elder's ability to choose a lifestyle versus a recent change in the elder's ability to manage.

H. Abandonment: The desertion or willful forsaking of an elder by any person having the care and custody of that elder, under circumstances in which a reasonable person would continue to provide care or custody.

III. PROCEDURE

A. PHYSICAL INDICATORS

1. Deputies will familiarize themselves with indicators of Physical Elder Abuse and whenever they see any of these indicators they will complete a crime report and investigate the matter completely.
   a. The following indicators will be listed in the crime report:
      • Cuts, lacerations, puncture wounds.
      • Bruises, welts, discoloration.
      • Any injury incompatible with history.
      • An injury that has not been properly cared for. (Including injuries that may be hidden on areas of the body normally covered by clothing).
      • Poor skin condition or poor skin hygiene.
      • Absence of hair (other than natural balding) and/or hemorrhaging below the scalp.
      • Dehydration and/or malnourished without illness-related cause.
      • Burns that appear to have been caused by cigarettes, caustics, acids, friction from ropes or chains.

B. FINANCIAL, EMOTIONAL ABUSE OR NEGLECT

1. Deputies will familiarize themselves with indicators of Financial, Emotional Abuse or Neglect.

2. Whenever a Deputy receives information indicating any of these types of abuse they will investigate competently.

3. If a determination is made that an abuse case may exist then the Deputy will document the incident and include any of the following indicators that are present in their crime report:
   a. Possible indicators of financial abuse:
      • Unusual or inappropriate activity in bank accounts.
• Signatures on checks, etc., that do not resemble the elder's signature.
• Power of attorney given, or recent changes of will, when the person is incapable of making such decisions.
• Unusual concern that an excessive amount of money is being expended on the care of the older person.
• Numerous unpaid bills, overdue rent, when someone is supposed to be paying the bills for a dependent elder.
• Lack of amenities, such as TV, personal grooming items, appropriate clothing, when the elder can well afford it.
• Personal belongings such as art, silverware, jewelry, family heirlooms missing.
• Deliberate isolation, by a housekeeper, of an elder adult, from old friends and family, resulting in the housekeeper alone having total control.

b. Possible indicators of Psychological/Emotional Abuse:
• Fear, withdrawal, depression, helplessness, hesitation to talk openly, implausible stories, confusion or disorientation, anger, denial, agitation or anxiety.

C. CARE PROVIDERS
1. When Deputies are investigating any instance that may relate to Elder Abuse they will be aware and document any of the following indicators of abuse by the care provider/suspect in their crime report:
   a. The elder may not be given the opportunity to speak for him or herself, or to see others without the presence of the suspect.
   b. Obvious absence of assistance, attitudes of indifference or anger toward the dependent person.
   c. Aggressive behavior. (threats, insults, harassment)
   d. Previous history of abuse to others.
   e. Problems with alcohol or drugs.
   f. Inappropriate display of affection by the suspect.
   g. Social isolation of the elder’s family, or isolation of the elder, or restriction of the elder’s activity.
   h. Conflicting accounts of incidents by the family, supporters, victims, or suspect.
   i. Unwillingness or reluctance to comply with service providers in planning for care or implementation of care.
   j. Inappropriate or unwarranted defensiveness by the suspect.
D. PHYSICAL EVIDENCE

1. Deputies will look for and obtain any physical evidence they find. These may include:
   a. Pictures of injuries.
   b. Pictures of the home; refrigerator, bedroom, living spaces, toilet facilities, trash disposal, locks on doors.
   c. Torn, stained or bloody clothing or bed clothes.
   d. Videotape of the elder’s conduct and mannerisms.
   e. Copies of bank transactions, canceled checks, power of attorneys, unpaid bills.

E. INSPECTION OF PLACES FOR EVIDENCE OF ABUSE

1. A report of elder abuse does not automatically provide deputies with the right of access to the place of abuse.
2. Deputies should develop probable cause and obtain a consensual entry.
3. Consensual entry may be obtained from either the caretaker or the elderly resident.
4. Forced entry may be made only with the approval of the area supervisor on probable belief that exigent circumstances exist.

F. REPORTING

1. Health Care and Medical Service providers are required by state law under PC 11160 to report to law enforcement any incidents where they treat a victim of assaultive or abusive conduct.
2. Deputies must include the reporting person's Title and name of the treatment location in their crime reports.
3. All reports will be routed to CPS/APS.
## I. POLICY

A. Barricaded suspects pose an extreme danger, not only to deputies who seek to arrest them, but to other persons as well.

B. Good judgment demands that a tactical plan be developed rather than immediately rushing a barricaded suspect.

C. Nevertheless, certain preliminary procedures must be followed to ensure that the Patrol and Special Operations Division response is effective.

D. In this regard, the Patrol and Special Operations Division maintains guidelines to assist initial units responding to a barricaded suspect incident.

## II. PROCEDURE

A. RESPONSE TO BARRICADED SUSPECT INCIDENTS

1. The following will be adhered to, when possible, by the units initially responding to the scene:
   a. Secure the area so that a barricaded suspect cannot escape.
      - This may involve requests for additional units.
      - Such requests will be made by the Patrol Sergeant in command at the scene.
   b. Clear the area of bystanders and evacuate adjoining buildings or apartments if necessary and possible.
   c. Advise Communications of the situation and request the presence of the area supervisor.

2. Once a barricaded suspect is isolated, time is to the benefit of the Patrol members. Patrol members initially responding should stand by until arrival of supervisory personnel unless there is imminent danger to life.

B. AREA SUPERVISOR RESPONSIBILITIES
1. The area supervisor first notified of a barricaded suspect situation will respond to the scene immediately.

2. While en-route, the following procedures will be adhered to:
   a. Notify Dispatch of the response and estimated time of arrival.
   b. Ensure that the Station Commander is notified, or in their absence the Watch Commander or on-call Watch Commander.

3. When at the scene, the following procedure will be adhered to:
   a. Review action taken and determine if more personnel/resources are needed.
   b. Establish a temporary command center and advise Dispatch of the location.
   c. If appropriate, request a S.W.A.T. response via Chain of Command.

4. If possible, an effort should be made to contact the suspect and attempt to persuade the suspect to voluntarily surrender.
   a. This should be done before force is used unless the lives of Patrol personnel or citizens would be placed in jeopardy.

C. BARRICADED SUSPECT CHECK LIST

1. IMMEDIATE CONSIDERATIONS
   a. Confine suspect to present location or area, and establish inner perimeter.
   b. Advise area supervisor of situation, deploy on scene deputies.
   c. Determine crimes involved.
   d. Advise responding units of a safe avenue of approach to the scene.
   e. Determine our need for further involvement in the situation.

2. ESTABLISH FIELD COMMAND POST
   a. Select radio frequency to be used.
   b. Advise Station House Commander, or in their absence, Watch Commander or on-call Watch Commander.
   c. Request additional personnel/resources if needed.
   d. Identify areas vulnerable to suspect's field of fire.
   e. Number, type and range of suspect's weapons.
   f. Establish outer perimeter & isolate area from traffic, request CHP to assist.
   g. Evacuate injured if possible.
   h. Evacuate neighboring buildings/homes if necessary.
   i. Brief personnel regarding intelligence gathered.
## Policy

A. **Criminals who use hostages to effect their escape are desperate individuals who, if allowed to escape, will pose a continuing threat to their hostage and to the public at large.**

B. **The Patrol and Special Operations Division does not have the ability to protect the safety of a hostage who is allowed to be removed from the presence of deputies.**

C. **The safety of hostages can be best assured by keeping them in the presence of deputies and by preventing their removal by the suspect.**

D. **Inclusive of Departmental procedures, the following procedures are maintained for the initial response to hostage situations.**

## Procedure

### A. Response to Hostage Situations

1. The following will be adhered to, when possible, by a minimum of two units who initially respond to the scene:
   a. Secure the area so that the criminal cannot escape.
      - This may involve requests for additional units.
      - Such requests will be made by the Patrol member in command at the scene.
   b. Clear the area of bystanders and evacuate adjoining buildings and apartments if necessary and possible.
   c. Advise dispatch of the situation and request the presence of an area supervisor.
   d. Stand by for instructions from supervisory personnel.

2. Deputies should realize that exceptional situations could arise where considered judgment might dictate allowing removal of a hostage, such
as where there is imminent and probable danger to a large group of persons.

a. In this event, initial units may make such a decision after a thorough consideration of the potential for injury or death to hostages and on-scene personnel.

B. AREA SUPERVISOR RESPONSIBILITIES

1. The area supervisor first notified of a hostage situation will respond to the scene immediately.

2. While en-route, the following procedure will be adhered to:
   a. Notify dispatch of the response and estimated time of arrival.
   b. Ensure that the Station Commander, SWAT Commander, Watch Commander, or in their absence the on call Watch Commander are notified.

3. When at the scene, the following procedure will be adhered to:
   a. Review action taken and determine if additional personnel or resources are needed, such as CHP for traffic control, Air Support, K-9, HNT, etc.
   b. Establish temporary command center and advise Communications of its location.
   c. Advise Communications of current status of the incident.
   d. Inform Station Commander of the details, action taken, and resources at the scene.
   e. Take action indicated by the situation or at the direction of superiors.
   f. When specialized units report their arrival at the scene, advise such personnel, when possible, of the details of the incident.
   g. In any event, determine that the area is secure and use every verbal and tactical tool to ensure the safety of the hostage and the arrest of the suspect. The original responding deputy should be relieved, if possible, to allow a debrief with SWAT/HNT as soon as perimeters are secure.

C. STATION COMMANDER'S RESPONSIBILITIES

1. When notified of a hostage situation, the Station Commander/Watch Commander should:
   a. Determine if the appropriate area supervisor is responding.
   b. Ensure that the designated hostage negotiator is notified and advised of the situation.
   c. Notify the Patrol Division Commander of the situation.
   d. Notify S.W.A.T. Unit commander, or a designee, if applicable.
   e. Perform any other duties or functions believed necessary.
2. The Station Commander may respond to the scene and assume command.
   a. If command is not assumed, the Station Commander will monitor the tactics to be employed.
   b. In any event, the Station Commander may take what appropriate action is deemed necessary to successfully resolve the incident.

III. RESPONSIBILITIES OF SPECIALIZED UNITS (S.W.A.T., K-9)

   A. When a specialized unit has been notified of a hostage situation, the commander of such a unit will ensure that adequate unit personnel and equipment are assembled at the command post or other designated area.
   
   B. Dispatch will be notified of the assembly area.
   
   C. The specialized unit will then stand by until notified to respond to the scene.
      1. Once notified to respond, the following procedure will be adhered to:
         a. While en-route, notify Dispatch of estimated time of arrival.
         b. Upon arrival, report to the on-scene commander.
   
   D. When authorized to perform the specialized function, the highest-ranking specialized unit member at the scene will assume command of the specialized unit.
   
   E. Tactics employed will be the responsibility of the commander/team leader of the specialized unit.
Arrest and Contacts with Persons
I. POLICY
   A. Arrestees will be treated and processed in accordance with all applicable laws and Sheriff’s Office Policies and Procedures.
   B. Officers will strive to minimize the time an arrestee spends in custody in the field, transporting arrestees to the Main Detention Facility as soon as possible, consistent with a completed investigation.
   C. Patrol and Special Operations Division supervisors will approve all arrests made in their area of responsibility during their tour of duty.

II. DEFINITIONS
   A. Probable Cause: A phrase that describes the amount of evidence (facts observed, information from others, or personal knowledge) that would be sufficient to lead an ordinary and prudent person to reasonably believe that a crime is occurring or has occurred, and that the person to be arrested committed or is committing a crime.
      1. Probable cause is determined by a consideration of the facts and circumstances present or apparent to the officer at the time he/she acted.
      2. It is not necessary to believe beyond a reasonable doubt, rather, the standard is simply reasonable belief.

III. GENERAL INFORMATION
   A. Arrests
      1. California Penal Code Sections 834 and 835 define an arrest, however, according to the constitution; an arrest is a seizure of the person pursuant to the Fourth Amendment.
      2. Because it is a seizure pursuant to the Fourth Amendment, that arrest must be reasonable.
      3. Since the basis for the arrest lies in the doctrine of probable cause, any interference with personal mobility, whether traffic stop, detention for
investigation of criminal activity, or actual arrest, must be tested by the Fourth Amendment.

IV. PROCEDURE
A. SUPERVISOR NOTIFICATION/APPROVAL
1. The arresting deputy will ensure the area supervisor is notified of the arrest.
2. The supervisor will evaluate the arrest based upon the elements of the crime and the circumstances as explained by the deputy.
3. The supervisor will approve the arrest prior to the suspect being transported from the scene.
4. The arrest will either be approved as being lawful and proper or the supervisor will cause the arrested person to be released.
   a. If the arrested person has been transported away from the area, the deputy will return the person to the location of the arrest.
5. In all instances where a citizen is deprived of his freedom, the responsible deputy will cause his immediate supervisor to be advised of the circumstances.
   a. This includes all warrant arrests and commitments for 5150 W&I.
   b. The ultimate responsibility for the lawfulness of all arrests and commitments lies with the field supervisor.

B. ARREST REPORTS
1. The arresting deputy will be given every reasonable opportunity to complete the arrest report as quickly as possible after the arrest.
   a. The report will include the name of the supervisor who approved the arrest.
   b. The arresting deputy should not go off duty until the report has been reviewed and approved by a supervisor.
      • Exception: Supervisors may approve the holdover of an arrest report after making considerations that include the type of arrest, the nature of the incident and how the holdover may affect the investigation and/or prosecution of the crime.
   c. The supervisor who reviews the report will be responsible for the content of the report and cause corrections to be made prior to allowing the deputy to go off duty.
   d. In the event that this is not the supervisor who approved the arrest, a copy of the report is to be routed to that supervisor.
2. One copy of the report will be routed to the Station Commander.
   a. The Station Commander will review all arrest reports.
C. AUTHORITY TO ARREST

1. Deputies will comply with California Penal Code Section 836 which, authorizes an arrest under the following conditions:
   a. Whenever the deputy has probable cause to believe that the person to be arrested has committed a public offense in the officer's presence, or pursuant to an arrest warrant.
   b. When a person arrested has committed a felony, although not in a deputy's presence.
   c. Whenever a deputy has probable cause to believe that the person to be arrested has committed a felony, whether or not a felony has, in fact, been committed.
   d. When directed by a magistrate or pursuant to a judicial order.
   e. When the person to be arrested has escaped from a place of detention or custody.

D. DEVELOPING PROBABLE CAUSE

1. Probable cause to arrest will be supported by facts.
   a. Vague "hunches" or suspicion are not enough.
   b. However, a deputy’s experience is definitely a fact that can be relied upon to support probable cause provided the deputy can document such experience.
   c. Deputies will establish probable cause to arrest by collecting facts of such quality that in all logic and common sense, they point with reasonable certainty in the direction of guilt.

E. IRRELEVANT FACTS

1. The facts upon which the belief is based must have been known at the time of arrest.
2. What the arrested person said or did or what other circumstances happened after the arrest took place are irrelevant to the question of the arrest's lawfulness.
3. Patrol members will base an arrest on only those facts occurring prior to making the arrest.
I. POLICY
   A. Citations will be employed as an alternative to physical arrest in all misdemeanor situations except those in which the arresting deputy can articulate specific factors that cause a belief that the citation process is not appropriate.

II. GENERAL INFORMATION
   A. The citation form serves as a means of releasing a defendant on his own recognizance in lieu of conducting the booking process.
      1. The following Penal Code sections and Vehicle Code sections authorize the use of citations:
         a. Section 853.6 P.C.: Notice to appear
         b. Section 40500 C.V.C.: Notice to appear
   B. Before issuance of a citation under the above sections, certain elements must be present:
      1. Probable cause for an arrest exists.
      2. The offense involves an infraction or misdemeanor.
      3. The individual responsible for the violation does not demand to be taken before a magistrate.

III. PROCEDURE
   A. COMPLETING THE CITATION
      1. Information required on the face of the citation must be filled in as completely as possible.
      2. In securing a violator's name, address, description, etc., a deputy must exercise the same care as if the information is to be used for a warrant.
      3. Citations shall be completed in quadruplicate, and the defendant's copy (yellow) given to the person cited.
4. The original and file copy will be submitted with the report, if a written report is required.

5. An electronic copy of the citation will be attached to the electronic report (ARS).

6. Deputies will retain the green copy for future reference.

7. All citations shall be printed with a writing instrument capable of making all copies legible.

8. Deputies will not cite Adults suspects for felony sections of the vehicle code (e.g., Evading a Peace Officer, Stolen Vehicle) or for felony driving under the influence cases.

B. REPORTING PROCEDURES

1. Citations issued for violations of the Penal Code, or any other federal, state, or county code will be accompanied by a "crime report."

2. Citations issued for any misdemeanor section of the vehicle code require a crime report.
   a. EXCEPTION: Deputies are not required to complete a crime report involving citations issued for Vehicle Code violations 12500a and 14601 if the probable cause for the stop is listed on the face of the citation.

C. PREPARATION PRIOR TO ISSUING

1. When the circumstances in an arrest involving misdemeanors allow for the issuance of a citation, the arresting deputy will conduct a brief background investigation to determine if the arrestee should be cited or released.

2. This information, if available, should include:
   a. Adequate proof of identity.
   b. Adequate proof of residence.
   c. Length of time at present address.
   d. Occupation, employer, and length of employment.
   e. Previous criminal record.
   f. Marital and family status.
   g. Any other facts that would assist in determining if a citation and release is appropriate.

3. The decision to use the citation process will be made by the arresting deputy or as directed by a supervisor.

4. When a decision is made to issue a citation, deputies will obtain and document adequate information so that the individual receiving the citation can be located later if they fail to appear as promised.
D. CITATIONS ISSUED FOR PENAL CODE VIOLATIONS

1. The following procedures set forth regarding citations issued for violations of the Penal Code will be adhered to by all deputies:
   a. Adults
      - Misdemeanor citations issued by deputies will be conducted in the following manner:
        - Allow at least six (6) weeks, when citing a person into court.
        - Allow at least eight (8) weeks if the offense involves laboratory work of any kind i.e.: a blood or urine sample for a D.U.I. case.
        - See Court Appearance Date form for days of the week and times to assign for appearance.
        - Refer to court card for specific times.
        - When the thirtieth day (sixth week) is a holiday or a weekend day, cite the defendant on the next succeeding weekday when the court will be in session.
        - When violations for other codes are also included with Penal Code violations, the appearance date will be set in accordance for the Penal Code violation.
        - Defendant receives the yellow copy of the citation.
   b. Juveniles
      - When citing juveniles in misdemeanor cases the Juvenile Affidavit Form (Contra Costa Probation Department) will be used.
      - Juveniles may be released on a juvenile citation involving a felony when circumstances are present (i.e., no previous police record, no violence involved, etc.) which dictate such release as proper, and then only if authorized by a field supervisor, Station Commander or O.D.
        - Exception: Juveniles involved in crimes of violence, acts involving potential for violence, and felony narcotics or dangerous drugs violations shall be attempted to be booked at Juvenile Hall.
        - Call Juvenile Hall with the arrest information prior to transporting to be sure they have room, or will make room for the juvenile.
• The decision to issue a citation or to book a juvenile will be dependent upon the nature of alleged offense, the demeanor of the involved juvenile, and previous police contacts and records.

• In all felony juvenile cases regardless of the disposition of the juvenile (cite released or booked) the case will be routed to the Investigation Division for follow up investigation, if needed and the filing of criminal charges through the District Attorney’s Office.

• Juvenile’s that are to be charged with a felony crime are not to be referred through the Probation Department via a Juvenile affidavit.

• Deputies must also remember: "In determining which disposition of the minor he will make, the officer shall prefer the alternative which least restricts the minor's freedom of movement, provided such alternative is compatible with the best interests of the minor and the community." (Section 626c W & I Code)

E. CITATIONS ISSUED FOR VEHICLE CODE VIOLATIONS

1. There will also be occasions when other misdemeanor citations are warranted involving Vehicle Code violations.
   a. Deputies are to refer to the current Court Appearance Dates Card for days of the week and times to assign for appearance.

2. When the violation involves both Penal Code and Vehicle Code violations, the appearance date will be set utilizing court appearance dates for Penal Code violations.

3. Speed shall be indicated on all citations, if applicable.

4. Juveniles: Citations issued to juveniles for Vehicle Code violations will be done in the following manner:
   a. Infractions: Juveniles will be cited in the appropriate court for all Vehicle Code violations designated as infractions.
   b. Misdemeanors
      • All juvenile misdemeanors require that the juvenile be cited directly to the Contra Costa County Probation Department (see form JH-50 revised 12/94)
         • Exception: Violation of 12500 CVC, which is always filed as an infraction.
         • NOTE: Juveniles may be issued a citation on "reasonable cause"; it is not necessary to observe the violation.
   c. Citations will also state: "Bring parent/guardian."
   d. Felonies
F. MUST-TAKE AND MAY-TAKE VIOLATIONS

1. When a person is arrested and taken into physical custody for a Vehicle Code violation, other than a felony, the violation must fall under one of the following sections:
   a. Section 40302 C.V.C.: Mandatory appearance
   b. Section 40303 C.V.C.: Optional appearance before a magistrate
   c. In the event an arrest occurs, as a result of a violation of either of these sections and the suspect is booked, no citation will be issued

   • The violations will be listed on the booking.

G. BOOKING AND CITABLE VIOLATIONS COMBINED

1. If any person is arrested on a charge that is not a Vehicle Code violation and there is an infraction including a Vehicle Code violation or lesser offenses also involved in the incident, deputies should indicate in their report the reason for the stop without issuing a citation for the lesser offense(s).

2. The person being arrested shall not be booked on the lesser offenses.

H. OTHER CITABLE CODES

1. Deputies will adhere to the procedures previously set forth in this manual section.

2. The requirement of writing a "crime report" also applies to any citation issued for violation of any other State or County code. (i.e., County ordinances, Fish and Game Code etc.)

I. AMENDING OR VOIDING A CITATION

1. In the event it becomes necessary to amend or void a citation, the following procedures apply:
   a. Section 40505 C.V.C.

   • Copy of notice, states in part, "No traffic or police officer shall set forth on any notice filed with a
magistrate or attach thereto or accompany the notice with any written statement giving information or containing allegations which have not been delivered to the person receiving the notice to appear or notice of violation."

b. Any changes or amendments on a citation will be conducted as follows:
   - If the deputy is still with the person being cited, a line will be drawn through the error and the issuing deputy will initial change.
   - The issuing deputy will ensure that the defendant's copy is changed in the exact manner.
   - If an error has been discovered after the citation has been issued, the issuing deputy will:
     - Obtain the Notice of Correction Form from the Patrol Clerical Staff.
     - The issuing deputy will complete and forward this form to Patrol Administration.
     - The Patrol Clerical Staff will contact the defendant and notify him/her of the change or amendment to the citation. This may be done by sending a copy of the letter to defendant at the address on the citation.

c. Instances which require a citation to be voided:
   - Deputies may not personally "void" a citation, if they have already issued the citation to the suspect or placed it on a parked vehicle. Doing so makes the deputy guilty of a misdemeanor.
   - To dismiss a citation after it has been issued to the suspect, you must:
     - Write a written memorandum to the appropriate court explaining the reason for the dismissal.
     - Attach the citation to the memo and forward it to the Patrol Division Secretary, who will in turn mail the package to the appropriate court.

J. REASONS FOR NON-RELEASE

1. Whenever any person is arrested by a peace officer for a misdemeanor, and one or more of the following conditions exist, the person will not be released with a notice to appear:
   a. The person is so intoxicated as to be a danger to him/herself or others.
   b. The person arrested requires medical examination or medical care or is otherwise unable to care for his/her own safety.
c. The person is arrested for one or more of the offenses listed in Section 40302 of the Vehicle Code:
   - When the person arrested fails to present a driver's license or other satisfactory evidence of identity for examination.
   - When the person arrested refuses to give a written promise to appear in court.
   - When the person arrested demands an immediate appearance before a magistrate/refuses to sign the notice to appear.

d. There are one or more outstanding arrest warrants for the person.

e. The person cannot provide satisfactory evidence of personal identification.

f. The prosecution of the offense or offenses for which the person is arrested, or the prosecution of any other offense or offenses will be jeopardized by immediate release of the person arrested.

g. There is reasonable likelihood that the offense or offenses will continue or resume, or that the safety of persons or property will be endangered by release of the person arrested.

h. The person arrested attempts to evade or resist arrest.

i. Any other valid reason with the prior approval of the area supervisor.

2. The reason for non-release shall be specified on the arrest report or on forms provided by the detention facility for that purpose.
I. POLICY
   A. Deputies will carefully and objectively evaluate private person arrests and, where it is lawful to do so, will receive and properly process the person arrested.

II. GENERAL INFORMATION
   A. Penal Code section 142 as amended by the State Legislature has removed the criminal and civil liability for peace officers if they refuse to receive a person arrested by a private person.
   B. Officers may receive the arrest if they are satisfied it is supported by probable cause, and may decline to do so in other cases, without risk of state prosecution or liability for false arrest.
   C. There shall be no civil liability on the part of, and no cause for action shall arise against, any peace officer, acting within the scope of his authority, for false arrest or false imprisonment arising out of any arrest when:
      1. Such arrest was lawful or when such peace officer, at the time of such arrest, had reasonable cause to believe such arrest was lawful.
      2. When such arrest was made pursuant to a charge made, upon reasonable cause, of the commission of a felony by the person to be arrested.
      3. When such arrest was made pursuant to the requirements of Penal Code Section 142, 838, or 839.

III. PROCEDURE
   A. RESPONSIBILITIES OF ASSIGNED DEPUTY
      1. The assigned Deputy is responsible for conducting a thorough investigation and will:
         a. Obtain pertinent information concerning the offense.
         b. Obtain complete suspect and arresting party information.
c. Follow through on the proper completion of a citizen's arrest form.
d. Interview all witnesses and gather any other pertinent information.

B. RESPONSIBILITIES OF CITIZEN MAKING A PRIVATE PERSON'S OR CITIZEN'S ARREST

1. The deputy shall ensure that the person making the arrest:
a. Informs the person arrested that they are under arrest and the offense they are being arrested for.
b. Signs the citizen's arrest form.

C. CITIZEN'S ARREST FORM

1. In all cases involving citizen's arrest, the involved deputy will ensure the person making the arrest completes the citizen’s arrest form.
   a. A citizen's arrest form is not required in cases where a juvenile is arrested and cited on a Juvenile Affidavit to Probation.

2. The original copy of the citizen's arrest form will be attached to and submitted with the crime report.

D. UNLAWFUL CITIZEN'S ARRESTS

1. In the event the involved deputy believes the citizen's arrest is unlawful, the involved deputy will not accept the citizen’s arrest.

E. REPORTING

1. All citizen's arrests, including those not accepted by deputies, will be documented in a crime report.

2. The crime report will minimally include:
   a. Who (the citizen) made the arrest
   b. What (the code section) crime the arrest was made for
   c. Who (the deputy) the citizen turned the arrested person over to.

3. In those cases involving a citizen’s arrest not accepted, the reasons for not accepting the arrest will be articulated.

F. CITATION AND RELEASE OR BOOKING

1. The circumstances surrounding the alleged offense will determine whether or not the person arrested should be cited and released or booked. The following should be considered:
   a. The nature of the offense committed.
   b. Suspect's prior criminal record.
   c. Continuation of incident and/or a further offense.
   d. Threats of retaliation by suspect.
   e. Any citizen's arrest involving a felony, the person arrested will be booked.
G. CITIZEN'S ARRESTS INVOLVING JUVENILES

1. Citizen's arrests involving juveniles are to be conducted in the same manner as those involving adults, except for the aforementioned exceptions.

2. In cases where a juvenile places another juvenile under arrest, discretion will be used when considering the alternatives, after the arrest has been accepted by the deputy.
I. POLICY
   A. Deputies are authorized to make appropriate contacts with individual members of the public in order to enhance the general public’s welfare and safety.
   B. These contacts will be made in a professional manner and with constant awareness of the citizen's "rights" and the possibility of danger to the Deputy and/or the public.

II. PROCEDURE
   A. CITIZEN CONTACTS
      1. A "citizen contact" is a face-to-face communication between a deputy and an individual when there is a lack of "reasonable cause" to detain or arrest.
      2. Contacts differ from detentions or arrests in that contacts do not involve the "seizure" of persons within the meaning of the Fourth Amendment and, therefore, the person contacted has a legal right to leave at any time.

   B. JUSTIFICATION AND AUTHORITY
      1. Whenever the training, experience and knowledge of a deputy indicates to him/her a person's conduct or presence needs clarification, the deputy may contact that person in any place that the deputy has a right to be.

   C. CONDUCT DURING CONTACTS
      1. When making "citizen contacts," deputies will remember that the individual is under no legal obligation to cooperate, due to lack of probable cause or legal justification to detain or arrest.
      a. The deputy cannot require the individual to answer questions or cooperate in any way.
      2. If the person contacted refuses to cooperate, the deputy must allow the person to proceed with whatever activity the person was engaged in.
a. A Deputy may continue to observe such a person, and when additional facts warrant, conduct a stop and field interview, or arrest.

D. PUBLIC ASSEMBLY CHECKS

1. Public Assembly Checks (PAC) will only be conducted in businesses that are within the patrol deputy’s assigned beat.

2. These checks may be performed when time and circumstances permit.

3. The duration of a Public Assembly Check should be no longer than ten minutes.
I. POLICY
   A. Patrol and Special Operations Division personnel will utilize "field interviews" to maintain the safety and welfare of the community by identifying and documenting movement of suspicious persons.

II. DEFINITIONS
   A. Field Interviews: A temporary detention of a person while investigating an unusual activity, which reasonably infers criminal activity.
      1. A "field interview" occurs when a deputy uses police authority either to compel an individual to halt, to remain in a certain place, or to perform some act (such as walking to a nearby location where the deputy can use a radio or telephone).
      2. If the individual believes that he or she is not free to leave a "field interview" is occurring.
   B. Reasonable suspicion: Is more than a hunch or mere speculation on the part of a deputy, but less than the probable cause necessary for arrest.
      1. It may arise out of contact, or it may exist prior to or independently of a contact.
      2. It may be based on factors such as appearance, actions, prior knowledge, area, time and experience.

III. GENERAL INFORMATION
   A. FIELD INTERVIEWS
      1. The "field interview" is a very useful and effective means of maintaining the safety and welfare of the community.
      2. By remaining alert, perceiving circumstances that may indicate crime, stopping suspicious individuals and conducting field interviews, deputies serve the community by preventing, discovering, or solving crimes.
a. However, the courts have indicated that certain elements must be present before a deputy initiates a field interview.

3. If a deputy has a reasonable suspicion that an individual has committed, is committing, or is about to commit any crime, they have the authority to stop that individual and conduct a field interview.
   a. The deputy may exercise this authority in any place that the deputy has a right to be.
   b. Both pedestrians and individuals in vehicles may be stopped.

4. The following elements must be present before a field interview is authorized:
   a. The deputy has reasonable suspicion that some unusual or out of the ordinary activity is or has taken place.
   b. There is some indication that the individual under suspicion is connected to the unusual activity.
   c. There is some suggestion that the unusual activity is related to criminal activity.
   d. All three elements must be present before an individual is stopped and a field interview conducted.

IV. PROCEDURE
A. INITIAL APPROACH
   1. Once the required elements have been established, the person may be stopped.
      a. However, provided that the public is not endangered and the chance of losing the suspect is not significant, it may be better for the deputy to wait to develop additional information to establish probable cause to arrest.
         • The guideline is: Don't ruin a good arrest by a premature stop.

B. USE OF FORCE TO DETAIN
   1. Deputies will use the least coercive means necessary under the circumstances to affect the stop of a person.
   2. The means used may be a verbal request, an order, or the use of physical force.
      a. However, under no circumstances may force be used which could cause death or serious bodily harm.
      b. If the deputy is attacked, or circumstances exist that create probable cause to arrest, the deputy may use the amount of force necessary to defend himself or affect a full custody arrest.

C. REFUSAL TO COOPERATE
   1. Refusal to answer questions or cooperate does not establish probable cause to arrest.
2. Officers cannot compel an individual to cooperate in a field interview.

D. TREATMENT OF DETAINED INDIVIDUALS
1. Officers will act with restraint and courtesy towards individuals being stopped.
2. They will identify themselves as law enforcement officers and advise the individual of the reason and purpose of the field interview.

E. MOVING THE DETAINED INDIVIDUAL
1. Officers will not transport or otherwise move an individual from the location where the stop is made except to verify answers given, and only when no other method of verification is available.
2. The distance such an individual may be moved is extremely limited.
   a. Stops are intended by law to be on-the-spot inquiries.
   b. When a suspect is moved farther than a limited distance, courts are likely to conclude that an arrest has been made.

F. LENGTH OF DETENTION
1. A detention must be temporary and last no longer than is necessary to carry out the stop.
   a. "Time" is a factor that can make a legal detention invalid.

G. DURATION OF STOP
1. A person may be detained only at or near the scene of the stop for a reasonable time.
2. Officers should detain a person only as long as is reasonably necessary to conclude the investigation.
   a. Should further suspicious circumstances arise during this period, the officer may detain the person until the further suspicious circumstances can be investigated.
   b. A reasonable guideline is that the stop should be terminated within twenty minutes unless answers given.
      • However, officers should not detain a person in excess of this time limit merely to ask further questions.

H. FIELD INTERVIEW RECORDS
1. Since a field interview is based on suspicious activity that relates to crime, officers should normally complete a "field interrogation" card and enter the data in the SPARKS database.
   a. In addition, the officer should maintain a copy.
2. All specific facts and circumstances relative to the stop should be recorded.
   a. If circumstances warrant, a "crime report" should be written.
Field Interview records are placed into a data file by the Crime Analyst Unit and kept for possible future identification of suspects, victims or witnesses when a crime scene is later discovered in the area of the stop.

Field Interview information taken days prior may be a crucial element in solving a crime or series of crimes in a geographic area.
I. POLICY

A. In cases involving minors taken into custody, deputies will use discretionary judgment and select a disposition which least restricts the minor's freedom of movement, but provides compatibility to the best interest of the community.

II. PROCEDURE

A. DISPOSITION IN THE FIELD

1. Deputies are encouraged to use an appropriate citation or counsel and release whenever circumstances indicate such alternatives are in the best interest of the juvenile and consistent with the safety of the community.

B. REPORTING ACTIONS TAKEN IN THE FIELD

1. Actions taken regarding juveniles will be documented in a report and routed as follows:

   a. Felony Offenses
      • Juvenile Victim-Investigations
      • Juvenile Suspect-Investigations

   b. Misdemeanor Offenses
      • Juvenile Suspect
      • Probation Cite
      • Juvenile Probation Department
      • Juvenile Diversion (Contract City)

      NOTE: the field deputy shall conduct Investigation in cases referred to the Probation Department.
C. NOTIFICATION OF CUSTODY

1. The deputy having custody of the juvenile will be responsible for notifying the minor's parents, guardian, or responsible relative that the juvenile is in custody.

2. When the juvenile is delivered to Juvenile Hall, deputies will advise an appropriate relative to call Juvenile Hall to secure information regarding the juvenile's status as it pertains to visitation and release.

3. Notification of an appropriate relative may be conducted as follows:
   a. By telephone.
   b. By making personal contact.
   c. By causing another beat car or police agency to make notification.

4. In the event of the absence of an appropriate relative, a note may be left at the residence or with a neighbor, or request the next appropriate beat car to make further attempt for notification.

D. DEPENDENT JUVENILES (300 W&I)

1. Deputies will, without a warrant, take custody of any dependent juvenile when one or more of the following elements are present:
   a. When a deputy has reasonable cause to believe that the juvenile has no parent or guardian willing, capable, or actually exercising care or control.
   b. When the juvenile is destitute and not provided with the necessities of life or suitable home.
   c. When the juvenile is a danger to the public and such danger is the result of a mental or physical disorder.
   d. When the juvenile is being neglected, deprived or physically abused by a person having custody of such juvenile.

2. In all cases, where a deputy is advised that any of the conditions listed in Section 300 W&I may exist, the deputy will conduct a full investigation.
   a. The deputy will not release the child into the custody of any parent or guardian that MAY NOT be willing or capable to care for the child.
   b. If the child is under the age of eighteen months, the shift supervisor will make the decision as to the custody of the child.
   c. A deputy taking custody of such a juvenile will report the circumstances in detail on a crime report and contact Protective Services who will make arrangements for placement.
   d. The child may be turned over to Protective Services or delivered to a foster home which they designate.
   e. Child Protective Services may be contacted at the following Telephone number:
f. NOTE: Dependent juveniles, under eighteen months of age, will be transported by ambulance to the County Hospital.
g. Protective Services will then be notified of the dependent infant.

E. STATUS OFFENDERS (601 W&I)

1. Deputies may, without a warrant, take custody of any juvenile when the juvenile continuously disobeys the reasonable and proper orders or directions of a parent, guardian or custodian, or is beyond the control of such persons.
2. The deputy assigned to the incident will determine that the elements of 601 W&I are clearly present and that the juvenile is not a law violator (602 W&I) or a dependent minor (300 W&I).
   a. These facts will be recorded in the crime report.
3. The deputy will inform the reporting party that juvenile laws do not provide for placement of status offenders into secure detention facilities.
4. Under certain circumstances and with consent of the involved parent(s), a juvenile may be placed with friends or relatives.
   a. At no time will a "status offender" be taken to Juvenile Hall.
   b. NOTE: Juvenile Hall will not take juveniles violating only 601 W&I.
5. The deputy will attempt to resolve the issue in accordance with the following procedures:
   a. Referral for counseling
      • Deputies will first attempt to resolve the issue through use of public or private counseling services.
   b. Twenty-four hour crisis resolution service
      • Telephone: 1-800-718-4357.
   c. Hotlines for Runaways
      • Contra Costa Hotlines are answered by Crisis and Suicide Intervention.
      • Telephone: 1-800-833-2900.
   d. Services for runaway and homeless youth, families and relatives of runaway children.
      • The first two sessions are free.
      • Beyond this crisis phase, fees are based on a sliding scale according to income and number of dependents.
      • Fees vary.
      • Health Insurance may cover part of the fee.
e. California Youth Crisis Line
   • 1-800-718-4357
   • Callers will be told where they can get counseling, help on obtaining shelter, transportation, food and medical care.
   • The Line will also relay CONFIDENTIAL MESSAGES between families and missing youths.

f. National Runaway Hotline
   • 1-800-621-4000
   • 24 Hour confidential advisory services for runaways and parents.
   • Crisis line for minors 17 years and younger.
   • Provides crisis information and referrals to youth through national and local switch board.

g. Crisis Home Placement
   • Northern California Family Center is a privately owned and operated emergency shelter for runaways and homeless youth.
   • Any child in Contra Costa County between the ages of 9-17 may access Youth Crisis services free, for home or on site crisis intervention.
   • Crisis home placement may be denied if the child:
     • Is a "602" ward or on formal probation
     • Has a history of fire starting
     • Is actively suicidal
     • Is exhibiting psychotic behavior
     • Is under the influence of drugs or alcohol
     • Has a history of violence or theft, especially towards people outside their immediate family
     • The parent/guardian refuses placement
     • The child refuses placement by not agreeing to obey Crisis Home rules
     • The child refuses to identify self and/or allow contact of legal guardian
     • Has a health problem or condition requiring medical treatment or special care
     • There is no bed available
Intake will be conducted through the office at 2244 Pacheco Blvd, Martinez on a 24-hour a day basis.

Deputies are to call in advance at 370-1990, to assure that the center will accept the juvenile, prior to transportation.

Police officers are given priority in Youth Crisis service placement.

F. LAW VIOLATORS (602 W&I)

1. When a juvenile is a suspect in a criminal offense the deputy assigned will process the incident in accordance with one of the following appropriate procedures:
   a. Citizen's arrest involving juveniles
      - The juvenile suspect will be processed in accordance with "citizen's arrest" procedures.
      - Discretion will be used in permitting juveniles to arrest other juveniles and the procedure should not be followed in such cases, unless no other alternative is available.
      - NOTE: Do not advise a person making an arrest of a juvenile to contact the District Attorney's Office.
   b. Juvenile citation process
      - When a citizen's arrest for a misdemeanor is made or the deputy has observed the crime, the juvenile may be cited to the Juvenile Probation Department.
      - When the circumstances and facts cause a deputy to reasonably believe a felony has been committed, such deputy will make a direct arrest as authorized by Sections 625(a), 625.1(b), or 625.1(c) of the Welfare and Institutions Code.

2. In all cases when an arrest of a juvenile has been made, the deputy continues to have the discretion outlined in Section 626 W&I which allows deputies to counsel and release, cite, or take the minor to Juvenile Hall in accordance with policy and procedures set forth in this manual.
   a. In all juvenile arrest cases a supervisor’s approval must be obtained for all dispositions (booking, cite release or counsel and release).
   b. In cases involving felony charges against a juvenile, the case will be filed directly with the District Attorney’s Office, not the Probation Department.
      - These cases will be referred to the Investigation Division for follow-up investigation and the filing of criminal charges.
      - NOTE: A Juvenile Probation Referral will not be used as the means to file felony charges against a juvenile.
• NOTE: Call Juvenile Hall to check if the juvenile is on probation. Juvenile Hall will provide information on search clauses, and probation status.

3. Deputies may assist Juvenile Hall Officers when requested to pick up violators of Juvenile Probation when the Juvenile Hall Officers have the proper paperwork showing P.C. to detain.
   a. Requests are generally made when the re-taking into custody presents a potential for violence by the juvenile or others.

G. PLACEMENT OF JUVENILES AT A DETENTION FACILITY

1. When a decision to place a juvenile in a detention facility is made, deputies will ensure that one of the following elements is present:
   a. The juvenile has been properly taken into custody for a violation of a federal, state, or local law.
   b. The juvenile is a ward or dependent of the juvenile court and there is reasonable cause to believe that the juvenile has violated an order of such court or has escaped from a commitment ordered by such court. (625 W&I)

2. Call Juvenile Hall to confirm all warrants and to advise them of the arrest prior to transport.
   a. If a warrant is from out of the county, confirm it and have it faxed to Juvenile Hall Intake.
   
   • Juvenile Hall has 160 beds, with an over flow of 20 beds.
   • It may be necessary for them to release a juvenile to make room for the new juvenile being booked.
   • Prior notification of a new booking will shorten delays at Intake for the transporting Deputy.

3. Deputies will transport the juvenile to the main intake center located at 202 Glacier Drive, Martinez.
   a. A Probable Cause declaration will be completed in ARIES containing a brief synopsis of what occurred and the probable cause to detain.

   • A certificate of probable cause (juvenile probation cite from #JH-50) will be completed and scanned/attached to the crime report.
   • The report can be faxed over to Juvenile Hall at the end of the shift.
   • The "Juvenile" copy (green) is given to the Juvenile, Parent or Guardian.
   • If the juvenile is cited, a juvenile probation cite will be completed and scanned/attached to the crime report.
4. Deputies will thoroughly report all facts in a crime report which indicate detention is necessary
   a. This report will be routed to the Investigation Division for any follow up investigation and/or the filing of criminal charges with the District Attorney’s Office.
   b. Such facts include, but are not limited to, the following:
      - The circumstances that establish the elements of the crime.
      - Facts that indicate the juvenile is likely to flee the jurisdiction of the court.
      - Facts which indicate that detention is urgent and of immediate necessity in order to protect the juvenile or the person or property of someone else.
      - Juvenile Hall must file a petition within 48 hours of the minor's arrest or the minor must be released.
      - Deputies will:
        - Provide a copy of the written report to the Juvenile Hall Intake Staff when the minor is brought to Juvenile Hall, or Fax a copy by end of shift.
        - Complete the Juvenile Probable Cause declaration in as much detail as possible, setting forth a summary of the facts and the manner by which the minor is identified as the perpetrator.
        - Fax all supplemental reports to the Intake Unit at Juvenile Hall within 24 hours of the supplement.

H. OBTAINING MEDICAL TREATMENT
1. When circumstances, facts, or other sources of information indicate that a juvenile is in need of immediate medical treatment, the deputy assigned to the incident will obtain such medical treatment in accordance with the following procedures:
   a. In a public place
      - When a juvenile is discovered in a public place and is in need of immediate medical treatment, the deputy will take the juvenile into custody and ensure the juvenile is transported to the Contra Costa County Regional Medical Center in Martinez.
      - When the emergency is severe and immediate medical treatment is required, deputies may transport such juvenile to the closest medical facility.
      - Upon arrival at a medical facility, deputies will abide by the medical facility's procedures pertaining to
completing forms, obtaining parental consent and other procedures deemed necessary.

b. In a private dwelling

- When the circumstances are such that it is reasonable to believe a juvenile is in need of medical care and a parent, guardian or other person in control of a juvenile's welfare refuses to provide the deputy with information regarding the condition of the juvenile, or refuses to allow a deputy's entrance into the place where the juvenile resides in order to investigate the condition of such a juvenile, deputies will notify the shift supervisor.

- The deputy will document all such facts available and forward a copy of the report to Child Protective Services for information.

  - EXCEPTION: When the facts, circumstances or other information lead a deputy to reasonably believe that a medical emergency exists and a delay in obtaining medical aid would threaten the life of a juvenile, such deputy will contact an area supervisor, explain the circumstances, and proceed as directed. When an area supervisor is not available (the deputy is authorized to take immediate custody of the juvenile).

- The deputy intending to take custody of such a juvenile will explain to the parent, guardian or other person in control of the juvenile that the law authorizes such action and will then demand entry.

- When/if entry is denied, the deputy should advise the supervisor and may use all means, short of deadly force (unless attacked with deadly force) to obtain custody of the juvenile.

- Once custody is obtained, the juvenile will be transported to the nearest medical facility.

c. Juveniles arrested for certain offenses

- Persons under eighteen years of age who are arrested for drunkenness, glue sniffing, or narcotics, and who display the symptoms of intoxication to a degree where injury might result, must be taken to the Contra Costa County Regional Medical Center for examination if detention is anticipated.

- A medical clearance will be obtained from the examining physician and delivered with the juvenile to the intake officer at Juvenile Hall.

- In all cases, deputies will ensure that the facts, circumstances, and information are adequate to establish
reasonable cause to believe that immediate medical
treatment was necessary, and required taking the
juvenile into custody.

- Deputies will report all such facts, circumstances and
  information received on appropriate forms and submit
  such reports prior to ending their tour of duty during
  which the incident occurred.

I. INCIDENTS OCCURRING AT SCHOOLS

1. Deputies assigned incidents that have occurred or are occurring on
   school grounds will cooperate fully with the appropriate school officials.

J. NON-CRIMINAL INCIDENTS INVOLVING INFANTS AND SMALL
   CHILDREN:

1. Deputies assigned or who become involved in incidents involving infants
   and small children in which the parent or other guardian is taken into
   custody.

2. The deputy will contact Protective Services for temporary placement of
   the child.

3. Children may also be left with responsible relatives or friends of the
   family (with a parent/guardian’s approval, when there are not any
   conditions of 300 W&I involved).

4. The place of care will be noted in the deputy's report.

K. TRUANTS

1. West County Patrol units may take into custody juveniles found not in
   school between the hours of 0800 to 1400 hrs, and transport them to the
   location identified by the school district.

2. The Juvenile can be turned over to the S.W.A.T. Program (Student
   Welfare and Attendance), who will identify the student and make
   arrangements to return the student to the appropriate school. (As
   authorized by Section 48264 of the Education Code.)

3. NOTE: School periods, when campuses are open, juveniles cannot be
   detained; i.e., first period, lunch, seventh period.
   a. No open campus for junior high school students.
I. POLICY
   A. When dealing with persons suffering from mental illness or inebriety, Patrol and Special Operations personnel will constantly evaluate the situation watching for mood swings that may affect officer safety.
   B. They will obtain the proper treatment for the involved individual.

II. PROCEDURE
   A. FIELD INITIATED EMERGENCY ADMISSIONS
      1. Section 5150 of Welfare and Institutions Code provides a peace officer the power to take into custody and transport to the nearest mental health facility any person who falls into the following categories:
         a. A danger to others.
         b. A danger to him/herself.
         c. Gravely disabled as a result of mental disorder.
            • NOTE: A deputy need only to establish reasonable cause to believe a person may be suffering from a mental disorder.
            • A person is considered gravely disabled when, as a result of a mental disorder, they are unable to provide for the basic needs such as food, clothing, and shelter.
   B. HANDLING AND CONTROLLING DISTURBED PERSONS
      1. Deputies assigned incidents involving disturbed persons should place officer safety as the first priority.
      2. Whenever possible, the initially assigned deputy should wait for a backup unit to assist.
      3. Deputies should evaluate the situation and obtain as much information as possible concerning the involved person; i.e., past history of mental
illness, violence potential, and if the involved person is currently under a physician's care.

4. The assigned deputy should keep in mind that the conduct exhibited toward a mentally ill person is important to the person's mental well-being.
   a. Deputies should:
      • Ignore verbal abuse.
      • Avoid excitement.
      • Do not deceive the individual.
      • Restrain and calm the person.

5. Deputies responding to incidents involving persons believed to be a danger to themselves must continually evaluate the incident. If it is determined that the best course of action to defuse or keep the situation from escalating is to withdraw from the scene, the following shall be done:
   a. The incident and our actions will be documented in a crime report.
   b. The Station House Commander will be notified and made aware of the incident.
   c. The Station House Commander or designee will assign a deputy to:
      • Follow up contact with the subject either in person or by phone to check on their welfare.
      • Generate a Mental Health Evaluation Team (MHET) referral.
      • Document all follow up actions in a supplemental crime report.

C. USE OF FORCE
   1. Deputies shall use only that amount of force necessary to overcome resistance and obtain control of the individual.
   2. The use of restraints, handcuffs and leg restraints shall be used only to prevent the individual from inflicting injury upon themselves or others.
   3. The Deputy placing such equipment on an individual shall be responsible for the documentation of the use of force and/or restraints in their written report.

D. TRANSPORTATION OF DISTURBED PERSONS
   1. The transporting of mentally disturbed persons to the mental health facility shall be conducted by ambulance, when available.
E. DOCUMENTATION AND FORMS

1. The Deputy must complete an "Application For 72 Hr. Detention For Evaluation and Treatment" (copy attached), of a person believed to be mentally ill, deliver it to hospital personnel (usually via ambulance personnel), and give a copy to the person detained.

2. The applicable case file number should also be written on the 5150 form in the upper left-hand corner.
   a. The Deputy is responsible for completion of a written report involving all field initiated 5150 W & I admissions.
   b. This report will be in addition to the 5150 W&I commitment form and the 8102 W&I weapons confiscation form if applicable.
      • If a weapon is confiscated, the Deputy will complete a declaration re: Confiscation of Weapons at the scene of incident or immediately thereafter.

3. In the event the subject is transported by ambulance, the emergency admission form should be given to ambulance attendants for medical chart and mental health clinic personnel.

4. In all cases involving the taking of a person to a mental health facility, the assigned Deputy will orally read the "Detainment Advisement" from the 5150 form to the involved person.

5. When weapons are confiscated or involved route and Fax a copy of the 5150 form, the 5150 report, the 8102 form and the Declaration re: Confiscation of Weapons to the Misdemeanor Complaints Office.
   a. Route a copy of the entire report to the Intelligence Sergeant.
   b. When 8102 forms are used, a copy will go with the involved party via the ambulance attendants to be given to the County Hospital personnel.
      • They must advise the Misdemeanor Complaints Office when the involved person is released, and document the same on the 8102 form.

F. PROCEDURES AT COUNTY HOSPITAL

1. At the time of the emergency commitment, the deputy is required to make written application, and complete an emergency admission form.

2. All 5150 commitments are to be taken directly to “Psychiatric Emergency Room” except for those in the following categories:
   a. Persons requiring medical treatment for injuries or drug overdose.
   b. Persons who are intoxicated or under the influence of narcotics.
   c. All persons over the age of sixty (60).
   d. Persons in the above categories are to be taken to the emergency room for examination.
3. Deputies shall conduct searches of all persons and remove items which could be used as weapons.

4. In cases of combative commitments, the deputy should request Communications to telephone the Contra Costa County Regional Medical Center, Psychiatric Emergency Room, and notify them of the patient's sex, age and arrival time.

5. Deputies should complete an emergency admission form on voluntary commitments that have a potential for violence or aggressive behavior.

6. All deputies are to cooperate and assist the hospital staff in the handling of patients.

G. EMERGENCY INEBRIETY COMMITMENT

1. The procedures for admission of a person under 5170 W & I are the same as set forth for 5150 W & I.

2. Before a person can be admitted to the County Hospital, the following conditions must be present:
   a. A designated 5170 Facility must exist.
      - County Hospital is not funded to house 5170's.
   b. The person is in such a physical condition which requires medical treatment; i.e., malnutrition.
   c. The person is suffering delirium tremors (D.T.'s).
   d. NOTE: The County Hospital will not accept persons who are merely intoxicated.
   e. The deputy must evaluate the person for other conditions that may exist that will warrant hospital admission
      - Example: Medical emergency or mental conditions relative to possible 5150 W&I.

H. SUICIDE ATTEMPTS

1. Suicide attempts are to be evaluated very thoroughly.

2. If the victim is already hospitalized or under the care of a private physician, no action is necessary unless requested by these authorities.

3. In cases involving suicide attempts, a crime report will be written reflecting the victim's actions, attitude, remarks, etc.

I. CONFISCATION OF WEAPONS

1. Officers are required by law (8102 W & I) to confiscate any firearm or other deadly weapon found in the possession or under control of a person detained for examination of his or her mental condition.

2. When a deadly weapon is taken under these circumstances, the deputy will complete a Declaration re: Confiscation of Weapons at the scene of the incident or immediately thereafter, and a NOTICE OF CONFISCATION OF FIREARM(S) OR OTHER DEADLY WEAPON(S).
a. The original of the Notice of Confiscation form will be attached to the crime report and the remaining copies will be given to the ambulance attendees or hospital attendants for their disposition.

b. A copy of the report, Notice of Confiscation and Declaration re: Confiscation of Weapons will be faxed and routed to the Misdemeanor Complaints Office.
   - A copy will be routed to the Homeland Security Unit.

c. Contra Costa County Counsel will petition the court in all cases to prevent return of these weapons when necessary.

d. The W&I 8102 procedure is time specific, and is imperative that the Misdemeanor Complaints Office receives the report as soon as possible so the petition process can begin.

3. A complete and thorough report must be submitted on each such incident. Included in this report must be a complete description of the weapons, including:
   a. Make
   b. Model
   c. Caliber
   d. Serial number
   e. Type of weapon (semi-automatic, revolver, bolt or pump action)
   f. Any other identifying marks or characteristics of the weapon
   g. The report must state who recovered the weapons, where the weapons were located and whether the weapons were loaded.
   h. The report will also include any statements or actions by the subject that indicated a willingness to use the weapon on themselves or others.

J. WALKAWAYS FROM COUNTY HOSPITAL

1. Persons who have walked away from the County Hospital and who have been committed under any of the preceding conditions are considered a walk-away.

2. These persons may be apprehended, without a warrant, upon written request of the hospital.
   a. Deputies should keep in mind that most commitments are not criminal offenders.

3. Persons who have been booked or had a booking opened should be considered escapees if they leave the hospital.

4. Patrol members will not act on direct request from the hospital, but will adhere to the following:
   a. Martinez Police Department will respond to calls from the Contra Costa County Regional Medical Center regarding walk aways.
b. Deputies will assist if a walk away is to be apprehended in County area.
I. POLICY
   A. Patrol and Special Operations personnel will maintain the highest officer safety possible when transporting prisoners, citizens or injured persons.
   B. In emergency transportation, such as blood and injured persons, they will drive courteously, defensively and safely.

II. PROCEDURE
   A. TRANSPORTATION OF PRISONERS
      1. Search of Prisoner's Person
         a. Every prisoner shall be completely and thoroughly searched for weapons, materials which can be employed to pick locks (ball point pens, safety matches, paper clips, etc.) and other contraband before any movement or transportation is made.
         b. The transporting deputy shall be responsible for such search.
      2. Restraint Equipment
         a. All felons and misdemeanants or known prisoners with potential violence and/or escape risks shall be restrained by securely applied double-locked handcuffs placed behind the back.
         b. Exceptions to this procedure are:
            - Very young juveniles, if in the deputy's judgment they can be safely transported without restraint or with handcuffs in front.
            - Prisoners transported by commercial airline while actually aboard the aircraft.
            - Prisoners to be transported for long distances; in which case, the handcuffs may be applied in front, double-locked and a waist belt also used.
Where there are an insufficient number of handcuffs; in which case, two prisoners should be cuffed with their right hands together.

c. Restraint equipment should be applied as soon as possible and not removed until reaching the destination.

If necessary to remove restraints during transport, more than one deputy should be present whenever possible.

3. Preparation for Transport

a. Whenever possible, deputies should familiarize themselves with the prisoner's record, attitude, and physical description.

b. The deputy should notify dispatch of the identity of prisoners prior to transporting.

c. It shall also be the transporting deputy's responsibility to obtain all documents, warrants, and other necessary papers before transporting.

d. The deputy must expect escape attempts and shall preplan his route, familiarizing himself with police agencies along the route, and have preconceived plans of action in the event an escape occurs.

e. All Deputies transporting prisoners will advise Dispatch, via voice radio, of their starting and ending mileage.

4. Prisoner Transports

a. The transportation of male and female prisoners together must be approved by a supervisor. The following must be taken into consideration when transporting male and female prisoners together:

- Whenever operations allow, male and female prisoners shall be transported in separate vehicles, or in vehicles that have separate compartments.

- If the female prisoner is cooperative, the transporting deputy can place the female prisoner in the front seat as long as the prisoner is properly restrained.

b. The transportation of adult and juvenile prisoners together must be approved by a supervisor. If the juvenile prisoner is cooperative, the transporting deputy can place the juvenile prisoner in the front seat as long as the prisoner is properly restrained.

5. Transportation Vehicles

a. All security devices provided to prevent escape shall be utilized.

b. Vehicles used for transporting shall be utilized as follows:

- Prisoners shall be placed behind the security screen in Patrol and Special Operations units unless the deputy has
more prisoners than can be accommodated there; in which case, a prisoner, hands cuffed behind the back, may be seated in front using the seat belt for further restraint.

- Note: The placing of a prisoner in front will only be conducted when no other alternative exists.

c. If unscreened vehicles must be used (i.e., rental cars), prisoners shall be handcuffed either with their hands behind their backs or in front provided a waist belt is used.

- No prisoner should be allowed to sit behind the driver.
- In these cases, the prisoner should be secured in the right front passenger seat with the second deputy seated directly behind the prisoner in the right rear seat.

d. All security devices, security doors and locks provided shall be utilized.

e. The procedure for unscreened vehicles applies to prisoners transported by chartered aircraft.

f. Deputies transporting prisoners by train, commercial aircraft or commercial bus shall follow current security guidelines as provided by the officer in charge of extradition or prisoner transport.

6. Hospital Transports

a. Patrol and Special Operations members conducting transports to the Contra Costa County Regional Medical Center shall restrain the prisoner as previously set forth.

b. Restraints shall not be removed during the examination or treatment unless the doctor indicates that it is absolutely necessary.

c. The deputy shall remain within sight of such prisoners at all times.

- If the deputy has more than one prisoner, only one should be removed from the vehicle at a time. More than one misdemeanor may be taken into the hospital, if in the deputy's judgment it is safe to do so.

7. Other Security Measures

a. Handcuff keys should be kept hidden from view.

b. The deputy should walk slightly behind and to one side with his firearm away from the prisoner.

c. Prisoners should not be allowed to talk with unauthorized persons.

B. TRANSPORTATION FOR OTHER AGENCIES
1. Transportation of persons arrested by other law enforcement agencies shall be conducted only as authorized by an area supervisor and/or Station Commander:

C. EMERGENCY TRANSPORTATION OF BLOOD

1. The Patrol and Special Operations Division will provide emergency transportation of blood between hospitals or from outside blood banks to hospitals in cases of true emergencies.
   a. For this policy, true emergency is defined as a situation in which a patient is in immediate need of blood (or other medical supplies) to avert a possible loss of life.

2. The transportation of blood will be conducted in the following manner:
   a. Dispatch will receive and act upon the initial request for blood.
      • Dispatch will obtain the pick-up information and drop off location along with the name of the doctor, the name of the patient and the response code.
      • Dispatch will schedule transportation to the designated hospital.
   b. The assigned deputy will pick up the blood, and after delivery of the blood, gather information provided by the hospital needed to write a report outlining the detail and any peculiarities involved.
      • The reviewing Sergeant will route a copy of the written report to Dispatch.
   c. The Station Commander/Contract Manager is to be advised of any cases where it appears that no true emergency need existed and the wrong code had been requested.
   d. All Code 3 blood runs must have approval of a patrol supervisor, area commander or O.D.

D. TRANSPORTATION OF CITIZENS

1. Patrol and Special Operations members may provide transportation for citizens under the following provisions:
   a. Such transportation is conducted within the requesting deputy's beat or near proximity.
   b. The citizen has no other means of transportation available.
   c. No priority 1 or 2 details are pending.
   d. The citizen submits his/her person to search prior to transporting. When refused, no transportation need be made.

2. All deputies transporting any citizen will advise Dispatch, via voice radio, of their starting and ending mileage.

3. No transportation of this type will be performed without first obtaining approval from an area supervisor, Station commander, Contract Manager or O.D.
E. TRANSPORTING INJURED PERSONS
1. Deputies should not transport injured persons from the scene of an injury to a hospital; an ambulance should be called.
2. Exceptions may be made whenever the member believes such transport is necessary due to unusual or exigent circumstances.

F. CAR STOPS WHILE TRANSPORTING PRISONERS
1. Deputies observing serious threats to public safety while transporting prisoners should notify dispatch immediately.
   a. They should not stop or attempt to stop another vehicle unless there is an immediate danger of loss of life.
2. If a traffic violation is observed, such as Driving Under the Influence, the deputy should notify dispatch and follow the driver until a support unit arrives to handle the detail.
3. The transporting deputy must advise the area supervisor of any interruption, stops, or deviation from the normal route or scheduled route in the transport from point of arrest or pick-up to point of booking.
   a. Notification must be made at the time the interruption occurs, unless the area supervisor is already aware that the stop will occur, and approves.
4. The safety of the prisoner is the responsibility of the transporting deputy.
I. POLICY

A. Once an individual is in custody, patrol and special operations personnel will make sure the prisoner is properly controlled and processed.

II. GENERAL INFORMATION

A. Once an individual is in custody, the Patrol and Special Operations Division has a responsibility to the community to ensure that an arrestee is properly controlled and processed.

B. Control may mean mere guarding or may require physical restraint.

C. Processing includes obtaining information about the arrestee and incident, completion of appropriate forms, and physical incarceration in an appropriate place of detention.

III. PROCEDURE

A. PROCEDURE IMMEDIATELY FOLLOWING ARREST

1. When an arrest has been made, the deputy making the arrest will immediately, if possible and practical, perform the following tasks:

   a. Inform the arrestee of the charge.

   b. Handcuff the offender behind the back.

   c. Conduct a cursory search to ensure the deputy's and others' safety.

   d. Search the area within the arrestee's immediate reach.

2. After transporting an arrestee, thoroughly search the patrol unit to see if evidence or weapons have been discarded during transportation.

B. PROCESSING AT BOOKING

1. Deputies, when presenting a prisoner for booking at the Main Detention Facility, will adhere to the following:
a. All appropriate forms will be thoroughly completed.
b. Remove all property from the prisoner for turnover to the booking deputy.
   • Evidence will be retained by the arresting deputy and booked into evidence according to policy.
c. Patrol and Special Operations deputies will abide by other rules pertaining to prisoner processing that have been established by the Detention Division.

C. SICK OR INJURED SUSPECTS IN CUSTODY

1. Sick and injured suspects will be transported to the County Hospital and medical treatment obtained.
2. An ambulance or patrol unit may be used for transportation depending on the prisoner's condition.
3. In extreme emergencies, the nearest hospital will be used.
   a. The prisoner will be transferred later, to the County hospital.
4. Upon arrival at a medical facility, the deputy transporting the prisoner will:
   a. Advise hospital emergency room of the prisoner's presence.
   b. Complete all appropriate hospital forms in accordance with hospital procedures.
   c. Ensure that the prisoner remains under control during the preliminary processing.
   d. Determine as soon as possible if the suspect is going to be admitted or treated and released.
5. When the preliminary tasks have been completed, the deputy will ensure that one of the following appropriate procedures is employed:
   a. Misdemeanor Crime-Suspect Not Admitted
      • The deputy having custody of the suspect will gather sufficient information to accurately identify the suspect.
      • The deputy may then issue a citation unless the circumstances of the incident and/or the need to further identify the suspect indicates that booking is appropriate.
      • If the suspect is issued a citation, the appropriate hospital personnel will be advised that the suspect may be released upon completion of medical treatment.
      • If the suspect is to be booked, the deputy having custody will stand by at the medical facility until medical treatment is completed and then book the suspect in accordance with established procedure.
   b. Misdemeanor Crime-Suspect Admitted
• The deputy will gather sufficient information to accurately identify the suspect and may then issue a citation.

• When a suspect is unconscious and unable to sign the citation, as much information as possible will be obtained about the suspect's identity and a complaint may be obtained at a later time.

• If the circumstances of the crime indicate that booking is appropriate to protect the public, the deputy will adhere to the "hospital booking" procedure.

c. Felony Crime-Suspect Not Admitted
• The deputy will stand by until completion of medical treatment and then process the suspect in accordance with established procedures.

d. Felony Crime-Suspect Admitted
• All felony suspects will be booked in accordance with the "hospital booking" procedure unless directed otherwise by a supervisor.

D. VIOLENT SUSPECTS
1. Deputies transporting a violent suspect to a medical facility for treatment will stand by with the suspect until medical treatment is completed or until the suspect is booked in accordance with the "hospital booking" procedure.

E. HOSPITAL BOOKING
1. When a suspect has been admitted to the County Hospital and it is determined that booking is appropriate, the following procedures will be adhered to:
   a. Notification M.D.F. supervisor.
   b. Fill out police hold form.
   c. Give custody of prisoner and hold form to hospital deputy.

2. "Open" bookings
   a. The arresting/transporting deputy will go to the Main Detention Facility and fill out all the booking forms.
      • Note: Obtain as much of the pre-booking form information as possible from suspect.
   b. In the event the suspect is a juvenile, the above procedures apply, except a booking will be opened at Juvenile Hall.
I. POLICY

A. Patrol and Special Operations personnel will exercise due diligence in serving arrest warrants.

II. DEFINITIONS

A. DUE DILIGENCE: “Such a measure of prudence, activity, or assiduously as is properly to be expected from, and ordinarily exercised by, a reasonable and prudent person under particular circumstances; not measured by an absolute standard, but depending on the relative facts of the special case.”

B. JAWS: Justice Automated Warrant System

C. CLETS: California Law Enforcement Teletype System

D. NCIC: National Crime Information Center

III. PROCEDURE

A. GENERAL RESPONSIBILITIES

1. Warrants assigned to Patrol and Special Operations Division shall be processed in the following manner:

   a. Field Sergeants will ensure adequate attention is given to warrant service and will facilitate the service of warrants whenever possible.

      • Field sergeants will be responsible for the following:

      • Ensure warrants assigned to beats within their area have service attempts and comply with due diligence.

      • Ensure members of his or her shift understand the importance of due diligence and those deputies are taking appropriate action on misdemeanors warrants to include cite releases as well as updating due diligence.
• Run the Outstanding Warrant List (OWL) for his or her area weekly and provide it to deputies for warrant attempts. The sergeant may designate a patrol staff member to perform this function.

b. Beat deputies will ensure attempts are made on warrants and due diligence is met.

• The following procedures are to be utilized for warrant service:
  • Prior to assuming patrol duties, obtain all warrants for assigned beat.
  • Obtain a copy of the current Outstanding Warrant List. (OWL)
  • Time permitting attempt service on warrants in his or her assigned area.
  • Updating warrant information is a primary responsibility of field deputies and will be done using JAWS.
  • Field deputies will verify active warrant status prior to service.

B. DUE DILIGENCE

1. All warrants must reflect "due diligence" which is accomplished by exercising all reasonable possibilities of service.

2. If "due diligence" has been exercised, and a warrant cannot be served it will be documented in the proper manner.

3. The court’s expectations are that misdemeanor warrants should be served within a one-year time period and felony warrants should be served within a three-year time period.
   a. If a warrant is un-served within the above listed time periods, the District Attorney’s office must be able to provide the court with DOCUMENTED DUE DILLIGENCE to serve the warrant.
   b. Failure to document due diligence may result in a Serna Motion and ultimately the dismissal of the case.

C. SOURCES OF INFORMATION ON DEFENDANT

1. In many cases, the information on the warrant is no longer accurate or current as to the defendant's whereabouts.

2. Suggested sources for obtaining current information are:
   a. Neighbors, landlords, family members, associates and schools.
   b. Post offices, water, gas, and telephone companies.
   c. Department of Motor Vehicles for changes of address and vehicles registered.
   d. Checking JWS 2 screen of JAWS for updated warrant information.
f. Check phone book for current address listing.

D. PHYSICAL ARREST PURSUANT TO A WARRANT

1. Deputies will arrest and book at the Main Detention Facility all persons taken into custody pursuant to a Felony Warrant.

2. The following procedures will be followed prior to transporting arrested subject(s):
   a. It is mandatory that the warrant(s) be confirmed as valid prior to service.
   b. It is mandatory that an abstract be requested or confirmation obtained from the Records Unit prior to booking.
      - No confirmation is needed if the warrant is in JAWS.
   c. EXCEPTION: Pursuant to Section 40304.5 of the Vehicle Code, no person will be booked at the Main Detention Facility on two or fewer warrants for failure to appear on a citation for a parking offense or a traffic infraction unless and until all of the following requirements have been exhausted:
      - If the person has sufficient cash in their possession, they shall be given the opportunity to post bail.
      - If the person does not have sufficient cash in their possession, they shall be informed of their rights and given the opportunity to all of the following:
      - The person shall be permitted the use of the police or Sheriff’s Office telephone to make not less than three completed local or long distance collect telephone calls to obtain bail.
      - Have not less than three hours in which to arrange for the deposit of bail.
      - Field deputies will refrain from becoming involved in the three hours required to arrange for bail, except under extenuating circumstances and prior approval of a field supervisor, Station Commander, Contract Manager or O.D.
   d. Prior to transporting the person for booking, the deputy will confirm that the identifying information contained in the warrant (name, date of birth, driver’s license number, etc. and physical descriptions) match the person that has been detained.
      - This comparison will be done in the field via dispatch or the patrol vehicle’s MDC.

3. Prior to booking a subject(s) arrested pursuant to a warrant, the deputy will obtain the original warrant or warrant abstract from the Records
Unit. Services may notify the Detention Facility of the warrant by sending the abstract warrant directly to the facility.

E. SERVING MISDEMEANOR WARRANTS

1. Deputies intending to serve a misdemeanor warrant between the hours of 2200 and 0600 hours will ensure that the warrant is endorsed for night service.

2. When such endorsement is lacking, officers will not serve the warrant unless the following circumstances are present:
   a. The arrest is made in a public place.
   b. The arrest is made when the person is already in custody pursuant to another lawful arrest.

F. FIELD CITE RELEASE OF SUBJECTS ARRESTED ON A WARRANT

1. Field citations may be issued on most warrants.

2. Field deputies will follow the procedure below:
   a. Run a warrants check on subject via Communication or via the Mobile Data Computer (MDC)
   b. Verify identity with a valid form of photo identification
   c. Obtain the Field Supervisors approval prior to the arrest
   d. Request Sheriff’s Communications have the Records Unit fax a copy of the abstract to the appropriate station house
   e. Request Sheriff’s Communications inform the Records Unit that the warrant will be cleared by cite and release
   f. Issue the wanted subject a citation to appear in the court listed on the warrant:
      - The appearance date shall be eight weeks from the date the citation is being issued.
      - Court Codes
      - 07100 Superior Court Martinez, 1020 Ward Street, Martinez
      - 07410 Superior Court Concord, 1010 Ward Street, Martinez
      - 07460 Superior Court Richmond, 100 37th Street Room 185 Richmond
      - 07465 Superior Court Pittsburg, 45 Civic Drive Pittsburg
      - 07480 Superior Court Walnut Creek, 640 Ygnacio Valley Road Walnut Creek (Traffic Only)
   g. Request a report number from Communications and write it on the citation in the appropriate location.
h. Complete an arrest report and submit it to the field supervisor prior to the end of shift.

i. The field supervisor shall ensure that the citation and warrant abstract is faxed to the Records Unit prior to the end of shift.

G. REPORTING WARRANT ARRESTS

1. All warrant arrests will be documented by the arresting deputy on an “A” page warrant arrest crime report, unless as otherwise directed by either this policy or a supervisor.

H. TELETYPE AND TELEGRAPHIC WARRANTS

1. The following procedures will be adhered to when handling teletype and CLETS/NCIC warrants:
   a. Teletype Warrants
      • Affixed to all teletype warrants is a "warrant service slip" which serves as the means for documenting service.
      • The procedure for service is the same as previously set forth.
      • When a defendant is arrested on a Teletype warrant, the original teletype will be obtained from the Records Unit prior to booking at Main Detention Facility (MDF).

I. FUGITIVE ARREST WARRANTS

1. An arrest made for an out of state warrant is an on view arrest per section 1551.1 of the California Penal Code and as such the deputy must develop probable cause for the arrest.

2. Regarding all fugitive arrest warrants refer to CCCSO 1.06.30, Out of State Warrants/Extradition and Rendition for detailed procedures.

3. The arresting deputy will prepare a detailed crime report of the arrest.

J. JUSTICE AUTOMATED WARRANT SYSTEM (JAWS)

1. This system allows the courts in Contra Costa County to enter warrants issued by the judge directly into the JAWS system at the time the warrant is issued.

2. This is an "Automated" paperless system for the most part with all the information concerning the warrant kept in a computer database.

3. When the field deputy does a warrant check, either through Communications or from their Mobile Data Computer (MDC), the JAWS, CLETS and NCIC will be queried.

4. The JAWS system works in the following manner:
   a. When a subject is issued a citation for a crime and fails to appear in court as promised, the judge will issue a warrant for an arrest and the court clerk then enters that warrant into the JAWS system at that time.
b. Information on the warrant becomes immediately available to field deputies.

c. Verification
   - When a Field Deputy does a warrant check on the subject, the warrant will be located in the JAWS system and the subject can be immediately arrested.

d. Confirmation of the warrant is not needed as the JAWS hit itself is confirmation that the warrant exists and provides the authority to book or release on citation.

e. Field Deputies will request that Communications contact the Records Unit to route a warrant abstract to the MDF and update JAWS.

f. If a JAWS warrant has been requested or served in error, the deputy making the request is responsible for having the warrant reactivated either by the Sheriff's Office Records Unit, or if a contract department, through their own department.

g. Outside (Out of County) Warrants
   - In cases of an outside warrant, the Field Officer will need to have Communications confirm the warrant with the agency that is holding the warrant and obtain verification of an active warrant.
   - The department that holds the warrant will then send the warrant abstract to the MDF or other location as requested by the field deputy.
   - Prior to transporting the person for booking, the deputy will confirm that the identifying information contained in the warrant (name, date of birth, driver's license number, etc. and physical descriptions) match the person that has been detained.
   - This comparison will be done in the field via dispatch or the patrol vehicle’s MDC.

h. Due Diligence
   - Due Diligence is documented by field deputies in the JAWS system.
   - The deputy serving the warrant shall enter attempts to serve the warrant or updated information “due diligence” via the JWS1 screen or AIRES website on the MDC or station house computer terminal.
   - Typing JWS1 on a blank screen brings up the Due Diligence screen.
   - The Due Diligence information can then be entered by the deputy using the warrant number, the court case
number is the same number as the warrant number, the issue date of the warrant and the control number.

- The JAWS system will track and record all of a warrant's due diligence history and is available from station computer terminals and the MDC by using JWS2 screen and entering the warrant number.

- The JWS2 screen will also allow you to obtain other basic information on a JAWS warrant using the warrant number.

- The JAWS warrant system will allow you to run a subject using only a last name and first name. This is the only system that allows you to do this.

- You may also get a JAWS hit when you run a license plate if that plate is associated with a subject who has a JAWS warrant.
I. POLICY
   A. Office of the Sheriff personnel will use a Mobile Fingerprint Identification Device to obtain positive identification of people that we as law enforcement come into contact with during the course of an investigation. Deputies shall conform to this policy when using the Mobile ID Device.

II. DEFINITIONS
   A. Mobile Identification Device (Mobile ID Device): A handheld scanning device that communicates with established fingerprint databases.
   B. Blue Check: A Model of a Mobile ID device made by the vendor Cogent
   C. AFIS: Automated Fingerprint Identification System
   D. CAFIS: Cogent Automated Fingerprint Identification System (Current CCCSO Database)
   E. DOJ NEC AFIS: The California Department of Justice AFIS system purchased from the vendor Nippon Electric Company (NEC)
   F. IAFIS: Integrated Automated Fingerprint Identification System (FBI Database)

III. PROCEDURE
   A. Because the process is more intrusive than a request for identification, a deputy using the Mobile ID device shall do so within the scope of this policy. Personnel must be sure not to violate a subject’s protection under the 4th Amendment of the U.S. Constitution.

IV. TRAINING
   A. Personnel shall receive training in the use and application of the Mobile ID Device prior to field deployment. Personnel shall also be issued a quick reference “User-Guide” for the device.
AUTHORIZED USE

B. The Mobile ID Device may be used in situations where a person gives a knowing and willing voluntary consent.

1. Prior to arrest or during a lawful detention, the Mobile ID Device may be used with the consent of a person under the following circumstance:
   a. The officer has reasonable suspicion that a crime has just occurred or is about to occur and the person to be printed is believed to be connected with that criminal activity. The fingerprint won’t “establish or nullify” someone’s connection to the crime, the fingerprint will identify that person who is believed to be connected to the crime. Evidence or the lack of evidence will establish or nullify someone’s connection to a crime.
   b. The deputy has reasonable suspicion the person to be printed is subject to an arrest warrant and there is a justifiable and reasonable belief the fingerprint scan will establish or nullify the person’s identity in the execution of the warrant.
   c. The deputy lawfully detained the person, and has reasonable suspicion the person intentionally gave a false or fictitious name or date of birth to the officer.
   d. If the officer has good cause to believe the person is a witness to a criminal offense and the officer has reasonable suspicion the person intentionally gave a false or fictitious name or date of birth to the officer.

2. Subsequent to an arrest, the Mobile ID Device may be used without the consent of an arrested suspect to:
   a. Verify the identity of the person to assist the officer in determining the appropriate handling, transporting and routing of the individual
   b. Obtain a person’s fingerprints that are required in the execution of a valid search warrant
   c. The deputy is going to cite a person for a California Vehicle Code violation (Misdemeanor or Infraction)

3. Reasonable force may be used to gain the suspect’s compliance with the execution of the search warrant. A deputy shall use the least amount of force needed to execute the search warrant. A person’s failure to comply may constitute contempt of court and failure to comply with the lawful order of a peace officer.

V. OTHER USE

A. When a subject is not in custody but is unable to give consent due to a medical condition and the confirmation of the subject’s identity is in the best interest of public safety.
I. POLICY
   A. All members of the Patrol and Special Operations Division have a responsibility to identify individuals responsible for criminal acts.
   B. Such identifications will be accomplished in a manner which ensures due process of the law, eliminates suggestiveness, and documents the process for use in court prosecution.

II. PROCEDURE
   A. Identifications
      1. Integrity of Identification
         a. Officers conducting an identification process will do so in a manner which ensures that individual witnesses are not influenced by another witness. The following guidelines should be employed whenever applicable:
            • Each witness will view the suspect out of the presence of other witnesses.
            • Witnesses will not be allowed to discuss their observations with other persons who are to participate in a future identification process.
      2. Maintenance of Neutrality
         a. When presenting a suspect to an eyewitness for identification, officers will remain as neutral as possible, consistent with the continued secure custody of the suspect.
         b. Officers will not suggest the correct identity of the suspect or make any suggestion, either verbal, through gesturing, or any other means which would influence a witness to identify a particular suspect
      3. Recording Circumstances
a. The Officer will record the following circumstances when conducting any identification:

- Time and location
- Persons present
- How conducted
- Duration
- Statements of witnesses attempting the identification
- Other circumstances which may assist in determining the validity of the identification

B. In-Field Showup

1. A field show-up occurs whenever an officer arranges for a witness to view a suspect who is being detained in the field.

2. When conducting a field show-up, the investigating officer will ensure that the following elements are present and documented:

a. Time and Location
   - The show-up should take place in the field and in a reasonable amount of time after the incident.
   - An officer who detains a suspect pending a show-up should not move the suspect to a different location or conduct a full-scale search of the suspect unless cause exists to conduct such a search.

b. Witness Description
   - The witness has described as completely as possible the appearance and clothing of the perpetrator.

c. Justification
   - The person to be viewed reasonably matches the witness description and/or the circumstances surrounding the presence of such a person in the area is such that a field identification process is justified. Such justification is based on “reasonable suspicion.”

3. There are three exceptions to the general rule of "bring the witness to the suspect."

a. Probable Cause to Arrest - If an officer has probable cause to arrest the suspect, the officer may transport him to the witness for identification. (Rafael (1982) 132 Cal.App.3d 977.)

b. Consent - If an officer obtains the valid, voluntary consent of a detainee to move him to the witness for a show-up, the movement is lawful. (Ortega (1982) 135 Cal.App.3d 244.)

c. Impracticability - If it is impossible or impractical to bring the witness to the suspect, the courts will often permit the movement of the suspect to the witness.
• The Witness / Victim Is Injured or Incapacitated: If the witness is injured, it is clearly permissible to transport the suspect to the witness. (Hall (1979) 95 Cal.App.3d 299; Carlos M. (1990) 220 Cal.App.3d 372.)

• Availability of Officers Is Limited: If the detention occurs in an area where there are not enough officers to secure the scene, to chase other suspects, or to transport the witnesses, courts have permitted the immediate transportation of the suspect to the witness. (Gatch (1976) 56 Cal.App.3d 505.)

d. Searches - A suspect detained on reasonable suspicion should not be subjected to a "full" search until after positive identification is made at the show-up and the suspect is arrested. A lawful pat down search of a detained suspect for weapons is permitted if an officer has specific reasons to fear for his or her safety.

C. Photographic Identifications

1. A photographic identification occurs whenever an officer arranges for a witness to view a series of photographs, sketches, or composites in an attempt to identify the perpetrator of a criminal act.

2. A photographic identification may be conducted whenever one of the following circumstances is present:

   a. The nature of the offense, and/or investigative circumstances, indicate that a formal line-up is not appropriate.

   b. There is no known suspect, but the officer has a description which is similar to the photograph being shown.

   c. The unusual physical appearance of the suspect causes a lack of suitable person to use in a formal show-up.

3. When a decision is made to conduct a photographic identification process, the following procedures will be adhered to:

   a. The pictures will be arranged and displayed in a manner which does not attract undue attention to any one picture in the series.

   b. Sketches or compositions may be used whenever there is no photograph of the suspect available.

   c. When conducting a photographic identification, at least six photos, or facsimiles, will be used.

4. Procedure After Positive Identification

   a. When a positive photographic identification is made, the officer conducting the identification process will preserve the photographic display, as viewed by the witness, for presentation in court at a later time.

   b. Such preservation will be accomplished by booking the display into evidence in accordance with established procedures.
I. POLICY
   A. Unless assigned to traffic enforcement duties or a contract city, members of the Patrol and Special Operations Divisions will enforce sections of the California Vehicle Code on an as needed basis to maintain the safety of the community and to protect property.

II. PROCEDURE
   A. OPERATING A MOTOR VEHICLE WHILE UNDER THE INFLUENCE
      1. Deputies may encounter individuals who are operating a vehicle while under the influence of alcohol or drugs. When a deputy believes an individual is under the influence, the has a duty to act to protect the members of the public.

      2. As part of their normal duties, Deputies assigned to contact cities will perform DUI Investigations when appropriate.

      3. Deputies who are working in unincorporated areas will turn over DUI Investigations to the CHP (or agency with jurisdiction) once the deputy develops probable cause to believe the driver is impaired. The law enforcement officer responsible for evaluating impairment is the individual who should administer the Field Sobriety Tests (FSTs). If the investigation is to be turned over to the CHP, the deputy will request dispatch notify CHP of a "DUI Turn-over" and not administer FSTs. When a "DUI Turn-over" is done, deputies are responsible for authoring an "Outside Assist" report detailing their probable cause for the enforcement stop and their observations which led to the belief the driver was operating while impaired. This report will be completed prior to the end of the deputy's shift.

      4. When an allied agency is unable or unwilling to respond, supervisors may ask contract city deputies respond to the location to perform the investigation.

      5. Initial Responsibilities
a. Deputies should observe and note the following in their report as part of their initial investigation:

- **Vehicle Operation.** The critical factor in any DUI investigation is the driver's ability to operate their vehicle. Deputies should annotate observed CVC Violations (failure to maintain lane, failure to use lights at night, etc.) that create probable cause for the initial vehicle enforcement stop.

- **Initial Observations.** The initial observations of the deputy upon contacting the driver should also be noted. Deputies should pay attention to odors (alcohol or drugs), the present of alcohol containers or drug paraphernalia, and other indicators of alcohol or drug use within the vehicle.

- **Driver Actions.** The deputy should note the physical condition of the driver when initial contact was made. The speech of the driver, their inability to complete simple tasks (such as locating their license and vehicle registration), the physical appearance of their eyes and face, and their response to basic questions may all signal impairment.

- **Note:** Some medical conditions present signs/symptoms that are similar to alcohol intoxication. Prior to beginning a DUI Investigation, deputies should rule out possible medical causes.

6. **Field Sobriety Testing**

a. When a deputy develops probable cause to believe a driver is impaired and the responsible agency is unable to respond, the deputy should begin a DUI Investigation.

b. Certain conditions may restrict the ability to perform formal Field Sobriety Tests (FSTs). A driver who needs medical treatment, physically disabled, or who is extremely intoxicated may not be able to perform FSTs. In these situations, the deputy may be forced to determine impairment based upon their training and experience in handling intoxicated individuals.

c. Field Sobriety Tests (FSTs) determine the driver's ability to perform motor skills similar to those required in operating a motor vehicle. FSTs should be demonstrated and performed in a safe location, for both the deputy and the driver. Drivers should be afforded the opportunity to remove shoes or outer clothing (jackets) that may restrict their ability to properly perform the tests. Whenever possible, FSTs should be administered on a flat surface.

d. When possible, the driver's performance of FSTs should be annotated on a DUI Investigation Card at the time the tests are
administered. Those notes should be transferred later to the deputy's police report.

e. **Standard Field Sobriety Tests (SFSTs).** The following tests are those that will commonly be used in DUI Investigations. Additional tests are authorized based upon the deputy's training and experience in administering those tests:

- **Walk and Turn:** In the walk-and-turn test, the driver is directed to take a specific number of steps, placing their feet heel-to-toe, along a straight line. The line should be visible (street marking or a line drawn by the officer). After taking the steps, the driver is instructed to turn on one foot and return in the same manner in the opposite direction. The deputy should look for seven indicators of impairment: (1) Can the driver keep their balance while listening to the instructions; (2) The driver begins before the instructions are finished; (3) The driver stops while walking to regain their balance; (4) The driver does not touch heel-to-toe; (5) The driver uses their arms to balance; (6) The driver loses their balance while turning, and/or; (7) The driver takes an incorrect number of steps.

- **One-Leg Stand:** In the one-leg stand test, the driver is instructed to stand with one leg extended and that foot held approximately six inches off the ground. The driver is then instructed to count aloud by thousands (One thousand-one, one thousand-two, etc.) until told to put their foot down. The deputy times the subject for a 30 second time period. The deputy looks for four indicators of impairment: (1) Swaying while balancing, (2) Driver uses their arms to balance; (3) The driver hops to maintain their balance, and; (4) The driver puts their foot down during the test.

- **Horizontal Gaze Nystagmus (HGN):** Horizontal gaze nystagmus is the involuntary jerking of the eyeball which occurs naturally as the eyes gaze to the side. Under normal circumstances, nystagmus occurs when the eyes are rotated at high peripheral angles. However, when a person is impaired by alcohol, nystagmus is exaggerated and may occur at a reduced angle. An alcohol-impaired person will also often have difficulty in smoothly tracking a moving object. In the HGN test, the deputy observes the eyes of the driver as they follow a slow moving object (such as a pen or small flashlight), horizontally with their eyes. The deputy looks for three indicators of impairment in each eye: (1) If the eye cannot follow a moving object smoothly; (2) If jerking is distinct when the eye is at maximum deviation, and; (3) If the angle of onset of jerking is within 45 degrees of center.
Field Sobriety Testing normally includes these three tests. An optional fourth test that can be administered is the Romberg Test: In the Romberg Test the driver is asked to stand straight with their feet together, their arms at the side and to remain in this position until told to start the test. When told to start, the driver begins the test by tilting their head back fully, close their eyes, and estimate 30 seconds while remaining in this position. Once the driver think 30 seconds has passed, they should bring their head forward, open their eyes and say "stop." The deputy looks for sway side-to-side and front-to-back. The officer also notes how long the driver's estimation was really.

7. Arrests and Detentions for DUI
   a. Should circumstances arise which prevent the turn-over of the investigation of a suspected drunk driver as mentioned above, Patrol members will adhere to the following procedures:
      • Conduct the field sobriety tests listed in 3.a.
      • Advise the suspect of the requirements to submit a breath or blood test per VC 23612 (Implied Consent Law).
      • Complete DMV Form DS 367.
      • Write a crime report and a fill out a DUI supplement.
      • Transport the suspect to the Main Detention Facility, for chemical testing and to complete the booking process.
      • Appropriately store all associated evidence.
   b. **NOTE**: Deputies will utilize good judgment when making a DUI arrest, considering the time involved and the absence of a unit in the beat.
      • The Deputy must eliminate any danger to the public before clearing the scene.
   c. Should the arrest involve a juvenile, deputies will follow the same general procedures. Juveniles should be cite released to a parent or guardian, unless the DUI arrest results in a felony charge.
   d. Arrests occurring within a contract city for DUI will be handled to completion by the investigating deputy.
   e. In the event the driver is being arrested and booked on additional charges, deputies will not request a C.H.P. unit or other agency respond, but will handle the arrest themselves.

8. Disposition of Arrestee Vehicles
a. The arresting deputy will advise the arrestee of the following options regarding his/her vehicle:
   - Secure and lock the vehicle at the scene (legally parked).
   - Release the vehicle to another person. (Note sobriety of other person prior to releasing the vehicle.
   - Tow and store the vehicle.

b. Whatever the disposition, deputies should check the vehicle for the presence of physical evidence related to the arrest.

B. TRAFFIC CASES

1. When responding to an accident that involves a driver who may be under the influence, deputies will:
   a. Determine Involvement. When a driver is suspected of being under the influence following a collision, the investigating deputy is required to establish that the person was driving at the time the accident occurred before an arrest can be made.
   b. Conduct an Investigation. Traffic accidents involving a suspected drunk driver who causes injuries to others (not themselves) will be handled as any other felony investigation, to include:
      - When the driver is conscious, a blood sample will be obtained using necessary force if the driver refuses. A search warrant is required.
      - When the driver is unconscious a blood sample will be obtained without consent when a search warrant is obtained.
      - Impound of the suspect vehicle.
      - Thoroughly photograph the of accident scene.
      - Collect evidence that shows the driver was impaired at the time of the collision. This may include empty beer bottle, drug paraphernalia, etc.
      - In all arrests for felony drunk driving, the area supervisor, station commander or O.D. will be notified.

2. Other traffic related incidents
   a. Deputies assigned to other traffic incidents (hit and run, vehicle/pedestrian, etc.) involving persons suspected of being DUI will process the incident in accordance with this manual section.
C. DRIVING UNLICENSED, OR WITH A SUSPENDED OR REVOKED LICENSE

1. When violations of this nature are encountered, to include Section 12500 C.V.C., Unlicensed driver:
   a. No crime report will be required for 12951a, 12500a, or 14601 C.V.C. violations when a driving or mechanical offense is also listed upon the citations (PC for the stop). If a CVC Section is not used to determine PC for the stop, a report is required.
   b. The citation will be routed to the Misdemeanor Complaint Deputy.

2. The Patrol Sergeant, Station Commander/Contract Manager or Watch Commander must approve physical arrest in 14601 C.V.C. cases.
   a. The arresting deputy will complete an arrest report and a probable cause declaration when the driver requires booking.

3. The Misdemeanor Complaint Deputy (upon receipt of a citation involving licensing) will review the citation and determine the appropriate Vehicle Code section to charge.
   a. The citation will be sent to either the appropriate court, the District Attorney's Misdemeanor Complaint Desk, or Juvenile Probation.

D. PARKING ENFORCEMENT-UNINCORPORATED AREA

1. In the unincorporated areas where control of parking has been established and posted by County Ordinance, enforcement is the responsibility of salaried Sheriff's Cadets, or Student Workers.
   a. Beat deputies may enforce parking regulations when necessary.

2. Violations of parking regulations will be cited as appropriate.
   a. Section 22500 A-K, 22500.1, 22502a, 22514, 21113a, C.V.C.
      • Denote parking violation on citation (i.e., no parking zone, overtime parking in two-hour zone)
   b. Section 22507.8, 22522 C.V.C. or violations involving handicapped zones.
      • Vehicles registered to disabled persons will bear a distinctive license plate or have a current blue placard visible within the vehicle
      • Note: When citations are issued for failing to display a placard, a photograph should be taken. The photos should show the lack of a placard, the positioning of the vehicle in the stall and the presence of both sign and ground markings.

3. The parking citation for the appropriate jurisdiction will be used when issuing parking citations (Crocket in Crocket, Diablo in Diablo, etc.).

E. OWNER RESPONSIBILITY VIOLATIONS
1. Patrol and Special Operations members will adhere to the following guidelines regarding violations which are the responsibility of the vehicle owner:
   
a. If the violation involves an equipment violation only and the driver is not the registered owner, the deputy will obtain information relative to the owner.
      - The driver will not sign nor be given the defendant's copy (pink).
      - The deputy will write "owner's responsibility-40001 C.V.C." in the signature block.
      - EXCEPTION: If the driver cannot provide information regarding the identity of the registered owner, the driver will be directed to sign the citation and given the defendant's copy.
      - The issuing deputy will forward the defendant's copy of citation to the Patrol Clerical Staff for mailing to the registered owner.
      - If both moving and equipment violations, are involved, separate citations will be issued.

b. In cases where a vehicle has changed ownership between parties and the driver claims ownership, but cannot provide registration to substantiate ownership, the citation will be given to the driver.
   - Note the date of change on ownership as claimed by the driver, and cite current owner for appropriate CVC Section if beyond the time allowed to notify DMV of change of ownership.

F. 72 HOUR VEHICLE CHECK/PARKING WARNING NOTICES

1. The lower half of the Vehicle Check/Parking Warning Notice must be removed and forwarded to the Patrol Clerk for future revenue collection by the Sheriff's Office (Vehicle Abatement Program requirement).

G. CITATION AND REPORT REQUIREMENTS

1. P.C. 1463.001 allows police districts to receive revenue from all court-imposed fines.
   
a. This revenue is derived from any fine imposed by the court when disposing of traffic, misdemeanor, and felony cases.
   
b. When citations are issued in specialty districts and a unique citation is not provided or available, deputies will change the numbering of the citation to reflect the correct special district. This can be accomplished on both moving and parking citations.
   
c. When modifying the citation, the deputy simply lines through the agency code on the citation and writes in the appropriate agency code on the citation.

Agency Codes
20 - CCCSO  24 - P-1 (Crockett)  28 - AC Transit
78 - Orinda  81 - P-5 (Roundhill)  40 - Lafayette
33 - Danville  83 - P2A (Blackhawk)  86 - Diablo
I. POLICY

A. Patrol and Special Operations Division will assist and cooperate with railroad police in unincorporated areas of the county when notified that an incident with a train has occurred. This section also applies to assistance provided to officers of the Bay Area Rapid Transit System (BART).

B. Deputies will respond to assist in the protection of life and property, scene control, preliminary investigation and collection of evidence.

C. Response will be coordinated to ensure that the incident is resolved and that the community's welfare and safety is restored.

D. Whenever called upon deputies will provide the necessary assistance to ensure that a complete and accurate investigation is conducted.

II. GENERAL INFORMATION

A. EMERGENCY CONTACTS

1. Burlington Northern and Santa Fe Railroad Police Topeka, Kansas
   a. 1-800-832-5452 will call all other necessary contacts

2. Union Pacific Railroad
   a. (24 Hr. Hot Line) Emergency Only 1-888-877-7267
   b. Signal Operations - 1-800-848-8715

3. Calif. Public Utilities Commission-Railroad Operations & Safety Section, Hazardous Spills or Releases (OES)
   a. 24-Hour Number 1-800-852-7550

4. Bay Area Rapid Transit, Oakland
   a. 510-464-7000

5. State Warning Center (CALOES) (24 hr.)
   a. 916-845-891
To activate an emergency call out for an incident involving a train, the responding deputy (with supervisor’s approval) will contact the State Warning Center (CALOES).

- OES will then contact the Public Utilities Commission who will assist in the investigation of the incident.

III. PROCEDURE

A. PROVIDE A SITUATIONAL ASSESSMENT / ESTABLISH A COMMAND POST

1. The first Deputy at the scene of a railroad incident will assume the duties of the Incident Commander until relieved.

2. The first Deputy will immediately notify dispatch of the following:
   a. Type of train involved (passenger/cargo/tanker)
   b. Size of the involved area
   c. Types of vehicles/structures involved
   d. Location of staging areas and landing zones (if needed).
   e. Determine the jurisdictional area
   f. Report additional hazards
   g. Additional resources that are required
   h. Location of the Command Post (CP).

3. Deputies and Supervisors should consult the Field Operations Guide (FOG) for checklists involving the management of rail incidents.

B. PROVIDE EMERGENCY FIRST AID TO THE VICTIMS

1. Providing care and aid to those that have been injured is a priority.
   a. The injured must receive the highest priority therefore; the first arriving deputy will ensure that the victim receives emergency first aid and further medical care as necessary.
   b. This task may be delegated to other competent persons or deputies, but the responsibility to ensure this task is accomplished remains with the first arriving unit or until the scene is turned over to the appropriate investigating agency.

C. NOTIFY COMMUNICATIONS AND REQUEST ASSISTANCE FROM JURISDICTIONAL AGENCY IN CHARGE

1. The initial responding deputy will attempt to identify which rail company is responsible for managing the incident.

2. Notifications to be made include the railroad police with jurisdiction, the Public Utilities Commission via OES, and CHP/Coroner if appropriate.

3. The railroad has the responsibility to report incidents to the Federal Railroad Administration per the Federal Code of Regulations.
D. DETERMINE THE NATURE AND CIRCUMSTANCES OF THE INCIDENT
   1. The first deputy arriving at the scene has the additional responsibility to conduct a preliminary interview of appropriate persons at the scene.
   2. The purpose of this preliminary interview is to obtain as much information as quickly as possible.
      a. Persons to be interviewed include the victim, the person reporting the incident, the train crew, and any other witnesses to the incident.

E. PROTECTION OF THE SCENE
   1. The railroad emergency scene shall be protected as a crime scene until it is determined no crime occurred.
   2. When practical, deputies dispatched to the scene will ensure that the area is protected so that physical evidence located in the area remains in the same physical condition.
   3. Protection of the scene may require closing the perimeter of the scene and securing the train.
      a. The extent of the protection necessary will be established by observing the entire scene and determining the extent of the emergency scene area where items of evidentiary value may exist.
   4. If the incident involves a hazardous material situation follow policy and procedures contained in the field manual for hazardous material incidents.

F. INFORM FOLLOW-UP PERSONNEL
   1. Deputies will document their response to an emergency train scene and will inform the appropriate jurisdictional investigator of witnesses/suspects detained, evidence found and all other information regarding the case, which may be helpful in achieving a successful investigation of the incident.
   2. The deputy will complete an outside assist report to include:
      a. Time of notification and arrival on scene.
      b. Time of notification to investigative agency (railroad/CHP).
      c. Time OES was contacted and requested to notify the Public Utilities Commission.
      d. Location of the scene.
      e. Summary of incident and statements if any.
   3. Copies of the report are to be routed to the investigating railroad police, the Public Utilities Commission, and the Federal Railroad Administration.
I. POLICY
   A. Patrol and Special Operations Division personnel will process and handle stolen, embezzled and impounded vehicles in a professional manner that maintains the proper chain of evidence.

II. DEFINITIONS
   A. Vehicle: A device by which any person or property may be propelled, moved, or drawn upon a highway, excepting a device moved exclusively by human power or used exclusively upon stationary rails or tracks.

III. PROCEDURE
   A. STOLEN VEHICLES
      1. Agency Jurisdiction
         a. The California Highway Patrol has primary responsibility for taking the initial report and completing the subsequent investigation of stolen vehicles in the unincorporated area of the County, except when:
            • The vehicle was taken as part of a Burglary or Grand Theft when other items were also taken.
            • The theft of the vehicle is incidental to the theft of its cargo (i.e., furs, money, merchandise).
            • The theft occurred within the boundaries of an incorporated city, which contracts for police services from the Sheriff's Office.
         b. If there is a conflict as to what agency will handle a stolen vehicle report that cannot be resolved by the field supervisor, the Sheriff's Deputy will complete the initial report and submit an interoffice memo to the Station Commander outlining the circumstances of the conflict.
2. Report Format
   b. Deputies are required to obtain the signature of the registered owner, or if they are unavailable, the person reporting the incident upon the Stolen Vehicle Report Form.
   c. The "Stolen Vehicle Report" will be scanned and attached to the report, along with a copy of the vehicle registration.
   d. The crime report must also include the date and time a BOLO was issued and who requested the BOLO.

3. BOLO Request
   a. After informing the field supervisor, the assigned deputy will provide the vehicle description and suspect information to communications and request a BOLO if the theft occurred recently.
   b. The deputy will provide additional information as necessary for the stolen vehicle to be entered into the Stolen Vehicle System (SVS).
   c. The deputy will obtain a File Control Number from Communications.
      - The File Control Number must be listed on the "Stolen Vehicle Report" form.
      - A copy of the FCN printout will be attached to the deputy's report
      - Supervisors will review the FCN entry and the original report to verify the accuracy of the information entered and that the entry information is supported in the original report.

4. Unreported Stolen Vehicles
   a. When a vehicle is recovered that the deputy believes has been stolen, but has not yet been reported stolen, the deputy will attempt to contact the registered owner of the vehicle to confirm whether their vehicle has or has not been stolen.
      - If necessary, this contact may be made through dispatch by having an Allied agency check with the registered owner.
   b. If the vehicle is determined to be an unreported stolen vehicle, the agency with jurisdiction over the location where the vehicle was stolen will be asked to complete a stolen vehicle report. The agency will be asked to enter the vehicle into SVS as a Stolen Vehicle.
c. In situations where the registered owner may be present at the recovery location, the assigned deputy may take the report as an outside assist, having the victim sign the Stolen Vehicle Report Form.

B. EMBEZZLED VEHICLES

1. Patrol or Special Operations Division deputies will conduct the initial investigation of all cases involving an embezzled vehicle.

2. An "Embezzled Vehicle Report" form will be completed and a signature of the registered owner, legal owner or representative if owned by a corporation will be obtained.
   a. Copies of rental agreements will be attached to the report if available.

3. Embezzled vehicles will only be entered by Investigations personnel once an arrest warrant is secured.

C. RECOVERED STOLEN OR RECOVERED EMBEZZLED VEHICLES

1. Agency Jurisdiction
   a. Deputies will handle recoveries under the following circumstances:
      • The recovered vehicle is directly related to another offense also under investigation by the Sheriff's Office.
      • The suspect(s) arrested are also arrested for crimes other than the stolen vehicle (i.e., possession of narcotics).
      • The Lo-Jack system was used to locate the stolen vehicle.
      • The vehicle was reported stolen by an agency other than the California Highway Patrol.
         • CHP may respond in most cases even when they are not the original reporting agency.
         • The California Highway Patrol's stolen vehicle cases will be recovered by the California Highway Patrol.

2. Report Format
   a. Deputies will complete a "Recovered Vehicle Report" form on all recovered vehicles.
   b. A new case file number will be requested only if the report originated through another agency.
   c. If the Sheriff's Office is the originating agency, the original case file number will be used (this is a supplement to our original report).
   d. If the vehicle is stored or impounded, a duplicate form will be given to the Tow Company Driver.
e. If the vehicle is returned to the owner the crime report must properly identify the owner.

f. The PF-9 Form must be faxed and/or e-mailed (TOWCLERK) to the Patrol Clerk on all impounds, stored vehicles (CHP-180 copy attached).

3. Notation of Time on scene
   a. The recovering deputy(s) will note their time of arrival on scene; time at scene processing the recovery, and the time the scene was cleared on the PF-9 or in the written report.
   b. The total elapsed time will be noted even when another agency is called and responds to take the recovery.
      - Total elapsed time is used to compile a record of total Sheriff's Office expenditures in processing vehicle recoveries and submitting a claim for revenue reimbursement from the State of California.
      - When more than one deputy is needed in the vehicle recovery, the elapsed times of each deputy on scene is noted and the total time for all involved will be documented in the written report.

4. Estimation of Vehicle’s Value
   a. The recovering deputy will note the estimated value of all recovered vehicles.
      - This estimation will be on the last line of the report and should read “estimated value at recovery” followed by a dollar figure.
      - This provides necessary information that is tabulated and reported to the State of California.

5. Notifications
   a. The recovering deputy will request dispatch "LOCATE" the vehicle in the Stolen Vehicle System (SVS) and remove it from the system.
      - At this time, dispatch must immediately notify the originating agency of the stolen vehicle recovery.
   b. CVC 10500 specifies that the original reporting agency, upon receipt of the information from the recovering agency, shall immediately attempt to notify the reporting party by telephone, if available, of the location and condition of the recovered vehicle.
   c. If the reporting party's telephone number is unknown, or notification attempts were unsuccessful, the original reporting agency shall notify the reporting party by placing, in the mail, a notice providing the location and condition of the recovered vehicle.
This written notice shall be mailed within 24 hours of the original reporting agency's receipt of the information of the recovery of the vehicle, excluding holidays and weekends.

6. Recovered 10851 vehicles where Sheriff's Office/Contract Cities are the Reporting Agency and the Recovering Agency:
   a. The deputy will have dispatch "LOCATE" the vehicle in the system and request dispatch attempt to telephone the owner immediately.
   b. If the owner is contacted and can respond to retrieve the vehicle (if it is drivable) in a reasonable time, the deputy will stand by and release the vehicle to the owner with proper ID.
   c. If the vehicle is Lo-Jack equipped, the deputy will not release it until the transponder has been deactivated.
   d. The deputy will have the owner sign Form PF#9 taking possession of the vehicle.
   e. Prior to releasing the vehicle, the deputy will ensure the stolen vehicle entry has been removed from the vehicle.
   f. If dispatch is unable to make phone contact or leaves a message, the deputy will document this information on the recovery form.

7. Outside agency makes recovery of Sheriff's Office/Contract Cities 10851 and sends a locate message which is received at the main CLETS terminal located in Services Division (warrant desk):
   a. Support Services Division personnel shall, upon receipt of 10851 messages, immediately re-route the LOCATE messages to the following two terminals:
      - PIC5 - Patrol Division Vehicle Clerk
      - CDS1 - Communications Supervisor
   b. Dispatch, upon receipt, shall locate through CAD/RMS, the beat that the original report was taken in.
   c. Dispatch will attempt telephone contact of the victim/RO.
   d. Dispatch will detail the beat deputy to write a Supplemental Report regarding notification.
      - This report will be routed to the Patrol Vehicle Clerk.
   e. In those cases, where the owner responds immediately to claim their vehicle, the vehicle will be processed by the deputy for physical evidence.

8. Evidence Processing
   a. Deputies will process the recovered stolen vehicle for evidence such as fingerprints, evidence of other crimes or items left in the vehicle by the suspect.
b. If the recovered stolen vehicle was involved in a major felony, place a hold on it for more comprehensive processing by the Crime Lab.
   • Document on the tow form that Crime Lab personnel will be processing for evidence.
   • Check with the Patrol Sergeant prior to requesting the Crime Lab.

9. Disposition of the Vehicle
   a. Impound
      • Vehicles will only be impounded with the approval of a field supervisor.
      • Vehicles impounded for allied agencies will be billed to the originating agency. Deputies shall notify the tow truck driver of this and annotate this on the PF-9 Form.

b. Release to Owner
   • If the owner is responding to recover the vehicle the deputy will make every effort to stand by until the owner arrives.
   • The recovering deputy will not release impounded vehicles to the owner.
   • Vehicles from cases originating with another agency may not be released without a release form the originating agency.
   • Vehicles from Sheriff's Office cases may be released to the owner by the investigator assigned to the case if they have been processed for evidence.

c. Tow and Store
   • All other vehicles will be "Towed and Stored" unless the owner explicitly tells the recovering deputy to leave the vehicle at the scene.
   • This will be noted in the crime report. All Routine tows will utilize the rotational tow system.

D. LO-JACK STOLEN VEHICLE RECOVERY NETWORK (SVRN) GUIDELINES

1. NOTE: SVRN guidelines do not change existing policy regarding jurisdiction, or reporting as outlined in this policy.

2. The procedure outlined in this policy applies only to stolen vehicle tracking situations, using the Lo–Jack system.

3. Once deputies have identified and are actively following a stolen vehicle, existing policies and procedures involving jurisdiction, tactics, follow-up responsibilities, etc. shall apply:
a. Equipment
   • When assigned to a vehicle equipped with the Lo-Jack system, deputies shall ensure that the equipment is turned “on” during their tour of duty.
   • When the Lo-Jack system is found to be inoperative, deputies will write the vehicle up for repairs.

b. Activation Signal
   • An SVRN activation signal will appear as a five-digit code on the Vehicle’s Lo-Jack display when the deputy is in range of an equipped stolen vehicle.
   • The codes for stolen vehicles may be any combination of letters and numbers.

c. Tracking
   • Upon receiving an activation signal from a Lo-Jack equipped stolen vehicle, deputies shall:
     • Conduct a query of the Lo-Jack code via the Mobile Data Computer Type “JACK” on a blank screen and hit enter, a mask will appear, enter the required information and send or have dispatch conduct the query for you.
     • Notify dispatch (give them the 5 digit Lo-Jack code) and request that they broadcast descriptive information about the stolen vehicle.
     • This will ensure vehicles not equipped with the Lo-Jack system are advised of the tracking activity, location and pertinent information about the stolen vehicle.
     • Request the helicopter if necessary.
   • When deputies receive an activation signal from a vehicle outside county jurisdiction, or when a vehicle being tracked leaves county jurisdiction, deputies shall:
     • Notify dispatch to contact the appropriate jurisdiction.
     • Notify their immediate supervisor.
     • Request the helicopter if necessary.
     • Continue to track the vehicle unless otherwise directed by a supervisor, or the track is taken over by the agency with jurisdiction.
     • NOTE: When another agency takes over a tracking, it is very important that the outside agency and the Office of the Sheriff communicate their intentions with one another.
• Tracking jurisdiction will be in command of the tactical situation and subsequent follow-up responsibilities (i.e. arrest, disposition of the vehicle, booking, reports etc.).

• Supervisors will monitor and ensure that S.O. units are either in command of a tracking or merely assisting an outside agency.

• All jurisdictional concerns shall be referred to a supervisor.

• When deputies become aware of a vehicle being tracked within their area by an outside agency, deputies shall:
  • Notify dispatch to ensure the information is broadcast.
  • Notify a supervisor.
  • Request the helicopter if necessary.
  • Assist the other agency when requested or directed by a supervisor.

• Upon receiving an activation signal from a vehicle that appears to be radiating from within a building or other enclosed area, deputies should contact their supervisor, property crimes detectives or C.H.P.

• As a general rule, a search warrant should be obtained. A deputy’s probable cause for the search warrant is the activation of the transponder, which gives the 5 digit code and subsequent verification of the stolen vehicle information.

d. Vehicle recovery

• Upon recovering a transponder equipped stolen vehicle, deputies shall broadcast the information to other units in the area, adjacent areas, or outside jurisdictions as necessary as outlined in this policy.

• Deputies should be aware of the potential problems that could occur if a recovered vehicle is still transmitting an electronic signal after being towed or released to an owner.

• NOTE: Deputies shall not release a recovered vehicle to the vehicle’s owner as long as an electronic signal is still being transmitted.

• In such cases, deputies shall contact dispatch, or request their supervisor to contact dispatch to ensure the vehicle is reported and entered into the system as recovered.
e. Supervisor’s responsibilities

- When advised of a SVRN (Lo-Jack) activation signal, and when practical, a supervisor should respond to the tracking incident.
- A supervisor shall respond to all tracking instances involving, or potentially involving outside agencies.
- During SVRN activation, supervisors shall consider area workload, traffic conditions, and strength of SVRN signal. In addition, supervisors shall ensure the following:
  - Proper tactics are employed.
  - A minimum number of units are used to track the stolen vehicle.
  - Descriptive information about the stolen vehicle is broadcast to non Lo-Jack equipped vehicles.
  - The helicopter is requested if a moving vehicle has not been located within a reasonable time after the signal has been detected.
  - Affected outside agencies are notified in cases in which a transponder equipped vehicle leaves county jurisdiction.
  - The unit or agency handling is clearly communicated.
  - Recovery information on transponder equipped stolen vehicles is broadcast to other units in the area, adjacent areas or other jurisdictions when needed.
- Recovered vehicles are not to be released to vehicle owners until the vehicle’s transponder has been deactivated.
- Ensure that transponder equipped vehicles being towed/stored/impounded have been deactivated.

E. IMPOUNDED VEHICLES

1. Patrol and Special Operations deputies will not impound vehicles unless they are involved in serious incidents and are of evidentiary value or when requested to do so by an outside agency (the Tow Driver will be advised of the agency requesting the impound, so the tow will be properly billed).

2. All impounds must be approved by the field supervisor.

3. When a vehicle is involved in one or more of the following circumstances, an impound tow may be appropriate.
   a. Homicides
b. Traffic fatalities  
c. Other fatal incidents involving the vehicle  
d. Other serious felonies involving the vehicle  

4. Impounds will not be brought to the impound storage yard at [redacted] unless authorized specifically by the Crime Lab. The Muir Station Sergeant, Dispatch Supervisor and Watch Commander will maintain a key to the yard.  
   a. After receiving Crime Lab approval for an impound to be stored and processed at Suite “C”, the vehicle may be towed to the location.  
   b. If Crime Lab personnel are not immediately available to respond to and allow access to Suite “C”, they may contact the Muir Station Sergeant or Watch Commander to disarm the vehicle bay and open the garage door.  
   c. It shall be the responding authority’s responsibility to ensure that suite “C” is properly secured after the vehicle has been placed in the garage.  
   d. The following two companies will handle all impounded vehicle tows.  

5. Report Format  
   a. The deputy impounding a vehicle will complete an "Impounded Vehicle Report" form.  
   b. The case number should be the same as the original case number if it is a Sheriff's Office case.  
      • Additional cases should be cross-referenced on the "Impounded Vehicle Report" form.  
   c. The field supervisor must review the report.  

6. Evidence Handling  
   a. If ignition keys are taken as evidence they will be tagged and placed into the evidence lockers at Muir Station Evidence.  
   b. A card will be placed on the dash of the impounded vehicle stating the Case #, Date, Time and deputy's name impounding the vehicle.  

F. TOWED OR STORED VEHICLES  
   1. Any time a vehicle is towed and stored a "Stored Vehicle Report" form will be completed.  
   2. Crime Classification  
      a. The crime classification will be the crime for which an arrest is made, or the probable cause for the vehicle stop, or other appropriate code from the "REPORT DESCRIPTIONS/DETAIL LISTINGS" booklet.
3. **Inventory**
   a. The deputy will conduct a complete inventory of the vehicle.
      • This should include any closed container whose contents cannot be determined by the exterior of the container and which may contain any items of value.

4. **Authority to Tow**
   a. The deputy will list their authority to tow the vehicle in the box titled "Storage Authority."
      • If more than one storage authority applies the deputy will list the most appropriate one first, other authorities that apply should be listed in the body of the report.

5. **Tow Hearings**
   a. A tow hearing will be held to determine the legality of the storage of a vehicle at the vehicle owner’s request. A Patrol Supervisors will conduct a tow hearing in accordance with Vehicle Code Section 22852 for persons requesting a release of impounded vehicles.
   b. The registered owner of the stored vehicle must submit a request for a tow hearing upon receiving the Notice of Stored Vehicle. The request for a hearing may be submitted in writing, by phone or in person.
   c. Tow hearings must be completed within 48 hours of the request of the registered owner, excluding weekends and holidays.
   d. The citizen requesting the hearing must present the patrol supervisor with a valid driver’s license, valid vehicle registration, proof of insurance and legal ownership of the towed and stored vehicle.
   e. Upon verification of all required documentation, the Patrol Supervisor will immediately waive the 30-day hold and release the vehicle to the legal owner.
      • The supervisor may refuse to release vehicle only when a warrant is obtained to continue law enforcement’s possession of the vehicle, or an agency can articulate facts to support an exception to the warrant requirement. (Brewster v. Beck, 2017).

6. **Vehicle Release**
   a. All Sheriff’s Office vehicle impounds or tows require a signed released (PF-9), also referred to as a CHP 180, prior to the owner or authorized agent taking possession of vehicle from the applicable tow company.
   b. Vehicle releases can be signed by any sworn employee or FOB administrative staff.
c. Original tow forms are kept on file at the FOB, in the front office.

d. The owner of the vehicle to be released must provide the following documentation:
   - Possess a valid driver license – and present photo identification. If the owner does not have a valid driver license, they must bring a valid driver to obtain a release.
   - Show proof of insurance for the vehicle.
   - Possess a valid registration (verifiable through DMV).
   - If the owner does not possess a valid registration, but has paid the fees and are waiting to smog the vehicle, they must first obtain a One-Day Trip Permit from DMV prior obtaining a Sheriffs Office release.

e. An agent representing the legal owner (i.e. a financial institution) of the vehicle can obtain a release upon presenting proper paperwork showing authorization.

f. The Sheriffs Office employee authorizing the release is responsible for faxing the signed release to the applicable tow company immediately after the completing the release.

G. VEHICLE LICENSE PLATES

1. Stolen Plates
   a. If both plates are missing the deputy will complete a "Stolen Plate(s) Report" form.
   b. Request dispatch enter the plate number into AutoStats and obtain a File Control Number.
      - This "FCN" number will be placed on the "Stolen Plate(s) Report" form.
   c. If only one plate is missing the incident will be handled as a lost plate unless witnesses or evidence indicate the plate stolen.
   d. A copy of the FCN printout will be affixed to a “C” page and included with the original report.
   e. Supervisors will review the FCN entry and the original report to verify the accuracy of the information entered and that the entry information is supported in the original report.

2. Lost Plates
   a. If only one plate is missing and there is no evidence of theft the citizen will be advised to contact the Department of Motor Vehicles to report the lost plate.

3. Recovered Plate(s)
   a. Request Dispatch run the plate to determine if it is stolen.
• If it is stolen have it removed from the system as recovered and complete a "Stolen Plate(s) Report" form.
• Indicate if one or both plates have been recovered.
• If the original case is a Sheriff's Office case write a supplement.

b. If it is not, then a case file number must be drawn.
c. The "Stolen Plate(s) Report" form may suffice as the entire crime report if all the information concerning the recovery can be put on the form.
d. A field supervisor must review this form.
e. If the plate has not been entered into the system as stolen, then simply return it to DMV or send the plate to the Field Operations Bureau and have it placed in the box marked DMV – LICENSE PLATE RETURNS in the Muir station evidence room.

• The deputy shall document their actions by completing the appropriate report form(s).
• Do not send found property license plates to the Central Property room or book them as evidence.

H. MOPEDS, MINIBIKES AND MOTORSCOOTERS
1. Vehicles in this category that are impounded, stolen, recovered, stored, or found abandoned will be handled as evidence or found property.
   a. Exceptions: If a DMV license plate is attached, or the Vehicle has a VIN number that has been registered with DMV.
2. Motorcycles over five horsepower do not fall in this category, even if the motorcycle does not have an engine attached at the time of the report.
I. POLICY

A. The primary purpose of the Injury and Major Protocol Accident Call Out Team (IMPACT) is to conduct and/or assist in the investigation of vehicle collisions involving fatalities, life threatening injuries, or other incidents when directed.

B. Members of the IMPACT Team may be used to perform forensic mapping for non-traffic related events when authorized by the on-duty manager.

C. IMPACT services are a resource of the Office of the Sheriff and participating agencies. Any outside request for IMPACT services will be handled as mutual aid request through the Emergency Services Division.

II. GENERAL

A. TEAM MEMBERS

1. The IMPACT Team shall be comprised of staff members who have specialized collision investigation training.

2. IMPACT Team members do not have to be assigned to the Patrol or Special Operations Divisions, but their assignment must be approved by the Special Operations Division Commander.

3. As a minimum, members must have completed advanced traffic investigation training.

4. The team will maintain at least one member who has completed training in traffic collision reconstruction.

5. One Sergeant from each participating agency will be assigned to the team and assume the title of IMPACT Team Leader for that agency. Ideally, when an incident occurs in a participating agency, that supervisor should coordinate the activities of the IMPACT Team.

6. Civilian support staff who have received specialized training in the collection of evidence, crime scene photography, and the operation of the Forensic Mapping System, may also be assigned to the IMPACT Team. Their primary function will be to serve as support personnel, assisting the
primary investigating officer with various tasks associated with the collection and diagramming of evidence.

7. One IMPACT Team Supervisor will be designated to serve as the IMPACT Team Administrator. The administrator is responsible for maintaining a current member roster containing the names and contact phone numbers (work, home, cell) for all team members. A copy of the roster will be provided to all Team Leaders and Sheriff’s Office Dispatch to help facilitate call-out notifications.

8. The Administrator will also be responsible for generating an After Action incident report, documenting the nature of the call-out, location, personnel, and equipment involved in the call-out.

III. PROCEDURE

A. CALL-OUT PROTOCOL CRITERIA

1. An IMPACT call-out should be considered when:
   a. A collision results in death, a life-threatening injury, or a severe incapacitating injury to any person.
   b. The collision itself is a felony crime.
   c. A complex crime scene needs to be documented and can best be done using the Forensic Mapping Tools used by the IMPACT Team.
   d. A collision resulting in a severe incapacitating injury to any person, and involving one of the following types of vehicles:
      - A public or private transportation vehicle, other than a school bus.
      - An on-duty emergency vehicle.
      - Any government vehicle.
   e. A supervisor believes there may be implied municipal liability.
   f. A supervisor believes the circumstances warrant a call-out.
   g. A request is made by an outside agency and approved by the Patrol or Special Operations Division Commanders.

B. CALL-OUT PROCEDURE

1. When a qualifying incident occurs, the IMPACT Team may be requested by a participating agency manager. When the IMPACT Team is requested, dispatch will notify the IMPACT Team Administrator (or another IMPACT Team Supervisor) who will contact the requesting manager.

2. If the IMPACT Team Administrator is unavailable, dispatch will utilize the IMPACT Team Roster and notify another IMPACT Team Leader to serve as the Supervisor for the incident.

3. The IMPACT Team Supervisor will:
a. Contact the manager who requested the activation to obtain a situation briefing. Following the briefing, the IMPACT Team Supervisor will verify that an IMPACT Team deployment is appropriate.

b. Determine the number of team members and equipment required for scene control and investigation.

c. Determine which team members will respond.
   - To minimize the impact to on-duty staffing, all efforts will be made to first utilize off-duty team members.
   - A team member from the requesting agency will be responsible for conducting the collision investigation. Should no officer from the host agency be available or should there be a conflict of interest (i.e., host agency officer involved collision), then the Team Leader will assign another non-host agency member to conduct the investigation.
   - If available, at least one of the responding members should be from the host agency.

d. Activate the team members needed for the call-out with the assistance of Sheriff's Dispatch.

e. Assign responsibilities to responding members as related to: investigative duties, evidence collection, forensic diagramming, and equipment transportation.

f. Notify the Team Administrator of the circumstances surrounding the call-out and what personnel are involved.
   - The Administrator will subsequently complete an After Action Report (AAR), documenting the nature of the call, location, personnel and equipment involved.
   - The AAR will be forwarded to the Special Operations Division Commander and the manager for the requesting agency.

C. ON SCENE PROTOCOLS

1. PRIOR TO TEAM ARRIVAL

   a. The critical incident or collision scene must be preserved to protect the integrity of the forensic evidence and to help ensure an accurate investigation.

   b. Prior to the team members’ arrival, the scene should remain closed to vehicular and pedestrian traffic.

   c. A perimeter should be established, encompassing the scene area, and restricting unnecessary activity within the location.

   d. If the incident is of a criminal nature, the scene should first be rendered safe and a crime scene log employed.
D. SCENE SECURITY

1. Leave involved vehicles in place and do not manipulate or adjust any vehicle equipment, gauges, accessories, etc.

2. Establish a perimeter around the scene, entire debris field, and all points of evidence (skids, gouges, vehicle parts, debris).

3. Stop all vehicle and unnecessary pedestrian traffic within the scene.

4. Do not touch or move any pieces of evidence.

5. If a vehicle or piece of evidence must be moved, photograph the item in place (up close and distant), and then mark its location with marking paint.
   a. Vehicles will be marked with a “T” at all four axles.
   b. Photographs will be taken from all eight points around the vehicle perimeter and should include the general area.

6. Victims
   a. Leave deceased victims in place.
   b. If a surviving victim, bicyclist, or pedestrian was ejected, efforts should be made to mark the location where the victim was found. Medical treatment and transport of the victim will not be delayed by accomplishing this.
   c. Mark positions of both head and feet with marking paint.
   d. If a victim is transported for medical care, obtain identification and statement if possible.
   e. Secure the victim’s clothing (including helmets and any carried articles) for evidence examination.

7. Suspects
   a. If transported for medical treatment, maintain custody of suspect.
   b. Following department procedure concerning Miranda, ask questions concerning the collision:
      • Speeds involved
      • Direction of travel
      • Vehicle condition
      • When/where victim seen
   c. If arrested, transport the suspect to a station house and await arrival of investigators.

8. Witnesses
   a. Locate and identify all witnesses for subsequent contact by an investigator.
   b. Document any statements and forward all information to team members.
E. AFTER TEAM ARRIVAL

1. The requesting agency will provide necessary personnel and resources to support IMPACT Team members. These resources may include:
   a. Traffic control around the incident scene.
   b. Emergency scene lighting.
   c. Evidence Technicians, to assist with the collection and logging of evidence.
   d. An agency liaison officer, and public works support.
   e. Sheriff’s Office Volunteer Services personnel (Sheriff’s Reserves, SAR) may be utilized to help source these needs.

2. All vehicles towed and stored/impounded during an IMPACT investigation will be towed and stored according to the directions of the responsible IMPACT Team Leader.
I. POLICY

A. The Sheriff’s Office is a member of the Abandoned Vehicle Abatement Service Authority.

B. The Sheriff’s Office Abandoned Vehicle Program has, as its primary responsibility the removal of abandoned vehicles from public property in the unincorporated areas of the county.

II. GENERAL INFORMATION

A. Abandoned vehicles pose a health and safety hazard to the unincorporated communities and detract from the quality of life of the community.

B. Abandoned vehicles on private property require special handling and shall be referred to Contra Costa County Code Enforcement for investigation and disposal.

C. Abandoned vehicles on public property may be investigated or removed by Patrol Deputies or specially assigned abatement officers.

D. Unincorporated Areas

1. Calls concerning abandoned, dismantled, wrecked or inoperable vehicles that are on private property will be handled by Contra Costa County Code Enforcement who has the primary responsibility for removal.

2. On public property abandoned vehicle complaints will be handled by Sheriff’s Office personnel.

3. The below procedures do not apply to the contract cities.

III. PROCEDURE

A. IDENTIFICATION AND INVESTIGATION

1. Once the vehicle is determined not to be stolen, the assigned employee will complete a 72-hour limit tag and place the tag onto the vehicle in an obvious location.
The vehicle's tires will be marked in a manner that can be identified by other employees.

The bottom portion of the tag will be provided to the FOB Tow Clerk.

2. Immobilized Inoperable Vehicles

Motor vehicles which are parked, resting, or otherwise immobilized on any highway or public right-of-way and lack an engine, transmission, wheels, tires, doors, windshield or any other part or equipment necessary to operate safely on the highways of this State, are declared a hazard to public health, safety, and welfare and may be immediately removed per Section 22669(d) V.C.

3. Operational and Registered Vehicles

Where the vehicle's registration has not been expired for over six months.

- After being properly tagged for 72-hours, if the vehicle has not moved, it can be removed.
- Vehicles parked more than 72 hours are in violation of Section 46-4.004 of the Contra Costa County Code and may be removed. The authority cited on the tow form will be CVC Section 22651(k) V.C.
- Prior to removing the vehicle, an attempt will be made to notify the owner of the vehicle of the impending removal.
- At the end of the 72-hours, the vehicle will be checked to determine if the vehicle has been moved.
- No further action is required if the vehicle has been moved.
- The re-checking of the vehicle will be the responsibility of the staff member that performed the initial tagging.

4. Unregistered Vehicles

If the vehicle registration is over six months expired and located on a highway, public lands, or an off-street parking facility:

- The vehicle can be removed immediately per Section 22651(o) CVC.
- The owner must furnish proof of current registration before the vehicle can be released. This should be noted on the "Abandoned Stored or Released Vehicle Report" form in the remarks section.
- Unregistered vehicles that pose a danger to traffic flow or are a hazard will be removed immediately.
B. REMOVAL OF ABANDONED VEHICLES

1. The Sheriff's Office will process reports of abandoned vehicles on public property at any time.

2. Abandoned vehicle calls for service will be routed to the Supervisor of the appropriate Sheriff's Station by Dispatch.

   The Supervisor is responsible for assigning the investigation of abandoned vehicle reports to the appropriate employee.

   Dispatch will continue to advise CHP of abandoned vehicles that are also traffic hazards.

3. Vehicles that are towed will be handled in accordance with Section 3.01.51, Impounded or Stored Vehicles.

   Every effort will be made to have all the abandoned vehicles towed during the daylight hours.

   Public agency salvage slips will be issued by the Station House Commander or designee on all vehicles with a value not exceeding $300.00 per 22851.3 V.C.

C. ABANDONED VEHICLES ON PRIVATE PROPERTY

1. When a vehicle(s) is observed on private property that meets the Abandoned Vehicle Abatement Program criteria, the address of the property where the vehicle is located will be forwarded, in writing, to Contra Costa County Code Enforcement.
General Information
I. POLICY
   A. Patrol and Special Operations Division will assist and cooperate with the Coroner's Office whenever called upon to do so.

II. PROCEDURE
   A. CIRCUMSTANCES REQUIRING A REPORT
      1. When a deputy is assigned to a death scene that is not a request for assistance from the Coroner's Office, a crime report will be written and submitted.
         a. Examples:
            • Traumatic deaths (industrial, suicide, homicide, etc.)
            • Any unattended death, to include apparent natural.
            • S.I.D.S. (Sudden Infant Death Syndrome)
            • Drug or alcohol related deaths (i.e., overdose).
            • Any death in which the cause is apparently other than natural.

   B. DEATH NOTIFICATIONS
      1. All notifications should be made in person whenever possible.
      2. The assigned deputy will ensure that the next of kin is emotionally stable before departing. If not, attempt to locate a relative or friend. Deputies should consider offering Sheriff’s Office Chaplain services to the next of kin.
      3. If the request is made by an outside agency, that agency will be notified, either by teletype or telephone of the outcome.
         a. A report will be written to document notifications.
b. The next of kin will be referred to the originating agency regarding inquiries surrounding the death.

C. REMOVAL OF BODIES

1. Deputies may be called to assist the Coroner's personnel in the removal of bodies when other assistance is not available.

2. The Coroner's investigator will contact the Patrol or Special Operations supervisor to request assistance.
I. POLICY

A. It is the policy of the Sheriff's Office that foreign diplomatic officers be accorded their respective privileges, rights and immunities as directed by international law, federal and state statute and be treated with courtesy and respect that befit their distinguished positions.

B. At the same time, it is a well-established principle of international and state law that, without prejudice to their privileges and immunities, it is their duty to respect local laws and regulations.

II. GENERAL INFORMATION

A. This policy instructs Deputies on the nature of diplomatic/legislative immunity, and outlines procedures for dealing with criminal and traffic violations by diplomatic/legislative personnel.

B. Embassies
   1. The highest ranking foreign diplomatic office in this country is an embassy.
   2. The majority of embassies are located either in Washington, D.C. or in New York, N.Y.

C. Diplomatic Officers
   1. Foreign diplomatic officers assigned to embassies are titled:
      a. Ambassador
      b. Minister
      c. Minister Counselor
      d. Counselor
      e. First Secretary
      f. Second Secretary
      g. Third Secretary
h. Attaché

2. The State Department designates these persons as “Diplomatic Agents.”

D. Employees
1. Employees at embassies are either members of the administrative or technical staff who are accorded a lower level of inviolability.

E. Members of the Legislature
1. Any person duly elected to the California Legislature or Federal Congress.

F. Consulate Offices
1. Branches of embassies located throughout the country are consulate offices.
2. Foreign diplomatic officers assigned to consulate offices are titled:
   a. Consuls-General
   b. Deputy Consuls-General
   c. Consuls
   d. Vice Consuls
3. Persons assigned to consulate offices are designated as career consular officers.

G. Honorary Consuls
1. Often nationals or permanent residents of the receiving state are appointed and received as honorary consular officers to perform the functions generally performed by career consular officers.
2. Such officers do not receive identification cards from the State Department of the type issued to career consular officers, though they may exhibit reduced-size copies of the exequatur or diplomatic note evidencing recognition by the United States Government.

H. Immunity
1. Honorary Consuls are not immune from arrest or detention
   a. They are also not entitled to personal immunity from the civil and criminal jurisdiction of the receiving state except as to official acts performed in the exercise of their consular functions.
   b. However, appropriate steps must be provided to accord such officers the protection required by virtue of their official position.

I. Archives and Documents
1. The consular archives and documents of a consular post headed by an honorary consul are inviolable (secure) always provided they are kept separate from other papers and documents of a private or commercial nature relating to other activities of an honorary consul.
J. Identification

1. State Department Foreign Diplomatic officials can be identified by credentials issued by the State Department and by other locally issued official identification papers or cards.

2. The extent of the "immunity" or "inviolability" for each classification is stated on the reverse of the card.

3. The State Department credential bears its seal, the name of the officer, his title, and the signature of State Department officials.
   a. A blue-bordered "Diplomatic" card indicates that the bearer has the status of a diplomatic agent.
   b. A green-bordered "Official" card indicates that the bearer has the status of an employee of a diplomatic agent.
   c. A red-bordered "Consular" card indicates that the bearer has the status of a consular employee.

4. State of California
   a. The State of California issues status cards to some foreign diplomatic officers, federal, congressional, and state legislators.

5. Honorary Consuls
   a. Honorary consuls will bear identification as stated above.

K. Immunities

1. Diplomatic Persons
   a. Diplomatic agents enjoy diplomatic immunity, which is broadly defined as the freedom from the jurisdiction of local criminal and civil courts accorded to duly accredited foreign diplomatic agents, their families, and their key employees, if such employees are not nationals of or a permanent resident in the receiving state.
   b. Career Consular Officers, his/her family or qualifying employees are not liable to arrest or detention pending trial, except in the case of a grave crime (felony offense or other act that would endanger the public safety) and pursuant to a decision by the competent judicial authority.
      - This immunity from criminal jurisdiction is limited to acts performed in the exercise of consular functions and is subject to court determination.

2. Treaties extend "immunity" or "inviolability" to other members of foreign missions.

3. If a deputy has a question regarding a claim of immunity, or if one who claims immunity does not possess identification to that effect, the deputy should contact the FBI or Special Investigations Division (SID) of the San Francisco Police Department for verification before taking further police action of any nature.
4. Legislative immunity is broadly defined as the immunity from arrest afforded members of the legislature who are en-route to an official session of the legislature.

L. Members of the Legislature

1. Persons who are elected members of the California legislature or United States Congress should not be unduly detained or arrested when such officials are en-route to a legislative session or meeting.
   a. However, when an offense is so serious as to warrant follow-up, a deputy may gather sufficient data to complete a preliminary investigation and then submit a report for later review by appropriate superiors.

2. When the conduct of such an official endangers the lives or safety of any person, the deputy may take custody of the official and transport to the nearest substation to confer with an immediate supervisor.

M. Premises and Papers

1. Consular premises used exclusively for the work of the consular post or his or her private residence cannot be entered without explicit permission of the head of the consular post, their designee or by the head of the diplomatic mission.
   a. This permission may be assumed in the case of fire or other disaster requiring prompt protective action.

2. The consular archives and documents are inviolable always and wherever they may be.
   a. The official correspondence of the consular post, which means all correspondence relating to the consular post and its functions, is likewise inviolable.

III. PROCEDURE

A. VIOLATIONS OF THE LAW

1. Criminal Violations
   a. Diplomatic agents shall not be arrested and booked, but may be physically detained when their actions involve a grave or felonious act.
   b. Detention shall be made with the minimum amount of physical restraint necessary under the circumstances.

2. Traffic Violations
   a. Moving Violations
      • When a diplomatic agent, a member of his or her family, or a qualified employee is stopped for a moving violation other than driving under the influence of drugs or alcohol (see below), the deputy upon being advised by the driver that they have immunity, shall ascertain that the driver possesses the proper credentials.
• Although some diplomats may receive immunity from prosecution, they are held accountable for traffic violations.

• Stopping diplomatic or consular personnel and issuing a traffic citation does not constitute an arrest or detention, and is permissible.

• Properly identified foreign diplomatic officers, a member of the diplomatic officer's family, or a qualified employee may be issued a citation, but shall not be required to sign it.

• Forward the citation to the Patrol Division Commander along with an incident report detailing the circumstances of the traffic stop.

• Carefully note the identification information in the incident report.

b. Parking Violations

• Consular Corps license plates do not exempt vehicles displaying them from being cited for parking violations.

• However, it shall be the policy of the Sheriff's Office that vehicles bearing such plates will not be cited for parking violations within one block of consular premises or residences of foreign consular officers in Contra Costa County.

• Deputies observing any abuse of this policy shall prepare a memorandum to their commanding officer. The memorandum must outline the circumstances in full and include license number(s).

c. Driving Under the Influence of Drugs or Alcohol

• The primary consideration in this type of incident shall be seen that the foreign diplomatic officer, a member of his or her family, or a qualified employee or a legislative officer is not a danger to himself or the public.

• Based upon the circumstances the following options, short of a detention are available:
  • Take the person to a telephone to call someone to pick them up.
  • Take the person home.
  • Call a taxi for the person.
  • Take the person to the Station House in the area of occurrence to recover sufficiently to drive safely.
- The diplomatic official should not be handcuffed, subjected to any sobriety test, or manhandled in any way, unless such an official is violent and such behavior endangers the safety of any person.
- It should be impressed upon such an official that the primary responsibility of the detaining deputy is to care for the diplomat's safety and the safety of others.

3. Prepare an unusual incident report and forward a copy to the Patrol or Special Operations Division Commander.
   a. Careful documentation of the identifying credential and the facts concerning the incident shall be included in the report.

B. NOTIFICATION AND REPORTING

1. When a detention occurs, the investigating deputy must notify the area Patrol or Special Operations sergeant.

2. An investigation will be initiated by the area patrol sergeant in cooperation with the station house commander, contract manager, or watch commander and the U.S. Department of State and the F.B.I.

3. In the event that a foreign diplomatic officer, a member of his or her family or a qualified employee should become involved in any action taken by members of this Department, the station house commander, contract manager, or Watch Commander shall be notified immediately and an unusual incident report prepared detailing the circumstances.

4. When a diplomatic/consular officer family member or staff is involved in a serious incident (murder, negligent homicide, etc.) the San Francisco Office of Security, U.S. State Department should be notified. When the incident involves a crime against the U.S., the F.B.I. should be notified.

5. The area supervisor upon notification of an incident involving a diplomatic or legislative official will respond to the location and assume command, the area supervisor will notify the station commander as soon as practical as to the circumstances involving such official.

6. Station commanders/police service managers will document incidents involving diplomatic or legislative officials on the "daily watch summary log."
   a. All reports will be routed to the Patrol Division Commander.
   b. In the event a diplomatic/consular officer, family member or diplomatic staff member is arrested or otherwise detained at a Sheriff's Office facility, the station commander or contract manager will notify the Patrol or Special Operations Division Commander as soon as practical.

C. ASSISTANCE

1. Driver and vehicle information, as well as assistance in incident handling, can be obtained from the Office of Foreign Missions (OFM) by calling:
a. (415) 744-2910, Extension 22 or 23 during normal business hours.

b. (571) 345-3146 on evenings, weekends and holidays.
I. POLICY
   A. Patrol and Special Operations deputies will respond to reported spills of hazardous and/or radioactive materials in such a way that the risks to the deputy, responding agencies and the public are minimized.

II. DEFINITIONS
   A. Hazardous materials: Chemicals that can be toxic, flammable, or explosive to include herbicides, pesticides, radioactive materials, petroleum derivatives and toxic chemical compounds.
   
   B. Standardized Emergency Management System (SEMS): SEMS is a management system intended to standardize response to emergencies involving multiple jurisdictions or multiple agencies. SEMS is flexible and adaptable to the needs of all emergency responders. SEMS requires emergency response agencies to use the basic principles and components of emergency management including ICS, Multi-Agency or Inter-Agency coordination.
   
   C. Incident Commander (IC): The Incident Commander is the individual responsible for the command of all functions at the field response level.
   
   D. Incident Command System (ICS): The Incident Command System is a standardized on scene emergency management concept specifically designed to allow its users to adopt an integrated organization structure equal to the complexity and demands of single or multiple incidents. ICS is the combination of facilities, equipment, personnel, procedures and communications operating within a common organizations structure, with responsibility for the management of resources to effectively accomplish stated objectives pertinent to an incident.
   
   E. Access to Remote Areas: Provide and maintain transportation means to and from hazardous material incidents located in remote areas.
   
   F. Communications: To establish an on-the-scene communications system from a command post location and coordinate communications off-site with the various support and resource agencies (i.e., CCC mobile unit).
G. Containment: Those immediate activities involved in confining material to its immediate influence and preventing further contamination.

H. Critique/Follow-up: To provide agencies involved a suitable site for critique and format for the continued improvement of hazardous material incidents.

I. Decontamination: The act of providing technical resources for neutralization of any contamination involving people or equipment.

J. Emergency Product Removal: To make necessary arrangements to ensure proper disposal of hazardous or potentially hazardous material and coordinate the various channels of funding available.

K. Evacuation: The process of removing citizens from a hostile or potentially hostile atmosphere or situation. Shelter is not included in the initial action.

L. Fire Control: Those activities that are necessary to prevent, confine, extinguish or protect citizens or property from a hostile fire.

M. Health and Environmental Hazard Assessment: To involve proper resources to make decisions on dangers and potentials of hazardous materials.

N. Inter-Agency Training: To coordinate the development of the initial and subsequent on going inter-agency training of all agencies or departments involved in the committee.

O. Medical Care: Immediate first aid treatment and/or triage and securing transportation for further treatment and care.

P. Notification: Process of informing proper authorities, departments, divisions, agencies, and districts systematically as the hazardous incident requires.

Q. Public Information: The act of releasing information concerning a hazardous material incident to the public, county E.O.C., media, or other persons not included in the matrix or not considered as a support agency or person.

R. Product I.D. Coordination: The action of attempting to identify the material and its characteristics and the securing of resources to obtain the information.

S. Radiological Monitoring: To provide monitoring and evaluation of a radioactive hazard. Advise on containment procedures and contact proper state and federal authorities.

T. Rescue: Those activities that remove victims from a source of harm or potential harm from any given situation.

U. Resource Coordination: The act of organizing, requesting, and dispatching resources not customarily available at the scene of a hazardous material incident as requested by the incident commander.

V. Scene Isolation: The initial securing of the scene and its perimeters to prevent unauthorized persons from entering (or exiting) or becoming involved in a hostile atmosphere or situation.

W. Scene Management: That process of continuing all acts that secure the scene and its perimeters to prevent unauthorized persons from entering (or exiting) or becoming involved in a hostile atmosphere or situation.
III. GENERAL INFORMATION
A. Section 8574.8 Government Code and Section 2454 Vehicle Code vests the responsibility for the management of an on-highway hazardous substance spill or disaster in the appropriate law enforcement agency having primary traffic investigative authority where the spill occurs.
B. In the unincorporated areas, the California Highway Patrol is responsible for spills on the roads or highways.
C. No specific regulation covers the authority for management of incidents on private property; however, the potential threat to life and property dictates police involvement.
D. Contra Costa County hazardous material area plans name the law enforcement agency having primary investigative authority as responsible for incident management.

IV. PROCEDURE
A. PATROL AND SPECIAL OPERATIONS RESPONSIBILITIES
   1. Patrol and Special Operations Deputy
      a. The first deputy arriving at a hazardous spill will assume the duties of the incident commander.
      b. Per SEMS the deputy will, as soon as possible, determine the immediate hazard area.
   2. Patrol and Special Operations Supervisor
      a. If circumstances warrant, and in the case of a major hazardous spill, a patrol supervisor shall relieve the assigned deputy as the incident commander as soon as practical.
      b. The supervisor will assess the magnitude of the incident to determine whether or not the multi-agency response procedure should be activated.
      c. The Patrol or Special Operations supervisor shall determine the appropriate mobilization status in accordance with standard procedures for major incidents.
         • In the event of multiple injured or, if the potential for large scale medical care is present, the County Multi-Casualty Incident Plan shall be activated.
         • If there are no known injuries, do not activate multi-casualty plan, instead, call for a medical advisory alert.
   
B. LAW ENFORCEMENT AGENCY RESPONSIBILITIES
   1. Law Enforcement is responsible for scene security and isolation.
      a. Once the primary risk area has been identified, isolate and secure it immediately.
   2. Two perimeter areas will normally be established.
      • Inner Perimeter Area
• A high-risk area and area needed to attack the spill by appropriate personnel.

• Outer Perimeter Area
  • An area needed for scene managers and incident commander(s) that will provide control of access and has no risk factor for committed personnel.
  • These are priority measures when subsequent assistance arrives. TREAT THE AREA AS A CRIME SCENE.

3. Fire Department
   a. The fire department will effect rescue, containment, fire control, and assist with product identification.

4. National Response Center
   a. Incidents involving suspected radioactive material must be reported to the A.C.E.
      • Phone (800) 424-8802.
   b. A Radiological Assistance Team will be dispatched, if necessary.

5. Environmental Health Department
   a. In a hazardous material situation, including suspected PCB's from a ruptured transformer, the Contra Costa County Hazardous Material Section should be notified by the first responder.
      • Phone (925) 646-2286.
   b. This can be done through the Office of Emergency Service (O.E.S.) who also must be notified.
   c. Both agencies can be contacted at the following numbers:
      • Contra Costa County Office of Emergency Services
      • 228-5000, Mon-Fri 0800-1700
      • Dispatch (CCSO Radio) 646-2441, 24 hours daily

6. Federal Bureau of Investigation
   a. The FBI will be advised and will assume ultimate responsibility in incidents involving a bomb threat or an actual bombing involving radioactive materials.

7. Public Health Department
   a. Once the Public Health Department has been notified, a health specialist will call the scene commanding agency.
   b. It has the ability and resources (two hi-tech units with 24-hour service) to make a product category identification and hazard assessment.
c. In all cases of hazardous materials (defined as caustics, corrosives, flammable, and toxins), someone from the Health Department will respond to the scene when requested.
   • In a minor spill situation, the health specialist may simply advise what action should be taken by telephone.

d. The health specialist will also give instant advice to the scene commander regarding safety of the public and employees near the site.

e. Generally, they have a one-hour response time.

f. They will respond to all "unknown substances," if requested.

g. They are not responsible for clean-up.

C. INITIAL RESPONSE
1. Any spill or potential release of chemicals or gases shall be considered and treated as hazardous until determined otherwise.

2. The deputy should approach from up-wind, up-stream and high ground, if possible.

3. Fuses (flares) or other sources of combustion should not be used in the vicinity of any hazardous materials incident without specific clearance from the incident commander, after conferring with the on-scene fire commander.

4. If possible, the deputy should attempt to identify the hazardous material by visual observation of hazardous material placards and/or shipping papers, referring to Department of Transportation (DOT) Hazardous Materials Emergency Response Guidebook (1993, 2nd Revision).

5. Initial scene isolation distances shall be determined by using the guidebook.

6. All but essential personnel shall be excluded from the immediate scene to avoid exposure.

D. INCIDENT COMMAND POST
1. An incident command post should be established outside the immediate hazard area as outlined by SEMS and the ICS.

2. The incident commander is charged with coordinating all activities at the incident and will act with the fire battalion chief in making decisions relative to hazard assessments, personnel needs, and communications between the scene and the communication center.

3. In the event of a major incident requiring total departmental mobilization and/or mutual aid, the command duty officer will assume the duties of the incident commander.

4. In addition, a representative of the involved company should be available at the command post to offer technical assistance and coordinate activities with reference to the substance involved.
5. The incident commander shall ensure that the medical staging area is located outside the immediate hazard area for use as an assembly point for medical evacuees.
   a. Contra Costa County Communications shall coordinate ambulance and hospital assignments.

E. EVACUATIONS:
1. Law enforcement is responsible for coordinating any evacuation efforts.
2. The decision to evacuate must be carefully weighed.
   a. Risk of exposure to citizens already in an exposed area could be increased by having them evacuate their homes or other structures and into a contaminated atmosphere.
3. Evacuation areas should be identified based on risk and anticipated exposure.
   a. This should be weighed against the risks and hazards that accompany an evacuation.
   b. The following considerations must be made prior to conducting an evacuation:
      • Identify areas of highest risk and initiate evacuation outward to areas of lesser risk.
      • Identify and communicate the following information to those who are to be evacuated:
         • Specific areas to be evacuated
         • Routes to be taken
         • Location of assembly areas
         • General reason for evacuation
         • Duration of evacuation.
      • If the duration of the evacuation is going to be extended over a long period of time, locate and identify relocation areas and provide for support unit to care for evacuees.
      • Determine the methods by which the evacuation order will be communicated.
      • May include radio and TV communication systems.
      • May request activation of Community Alert Network (C.A.N.)
      • May request activation of Community Warning System (C.W.S.)
      • May contact the FAA if airborne hazards may cause problems to air traffic flying over the area.
      • Determine how evacuated areas will be checked to ensure that the evacuation order has been followed.
• Consider the following:
  • Handicapped (hearing impaired) may not have heard the evacuation order.
  • Handicapped and/or non-ambulatory persons may not be able to evacuate without assistance.
  • Determine a Security Plan for the evacuated area(s).

F. DOCUMENTATION
1. A detailed log shall be maintained at the command post.
   a. The log shall be specific as to exact time and action taken.
   b. The log shall be maintained by the deputy designated by the incident commander.

2. A detailed report documenting the incident shall be completed at the termination of the incident by the assigned deputy.

G. HAZARDOUS MATERIAL IDENTIFICATION
1. To properly handle a hazardous material incident, the material must be identified and the dangers and methods of handling determined.
   a. The D.O.T. Hazardous Materials Guidebook may not cover all types of materials encountered.

2. The following procedure should be used in identifying hazardous materials:
   a. The incident commander should gather the basic information in the field relative to the product(s) involved.
   b. Product(s) should be identified, if possible, and emergency actions initiated by utilizing D.O.T. Hazardous Materials Guidebook (2000)
   c. Product identification or requests for assistance to do so should be relayed to the communication center and the station house commander.
      • This information should be forwarded to the County Environmental Health Department as outlined above.
      • The Health Department should be requested to report to the site, the California Transportation Department may also be contacted for assistance.
   d. Additional assistance in identification and removal may be sought on a 24-hour basis through a nationwide agency called (CHEMTREC) Chemical Transportation Emergency Center.
      • Phone (800) 262-8200.
H. CHEMICAL SPILL SAFETY RULES

1. Accidental chemical spillage can create a potential hazardous condition for deputies, fire fighters, and citizens.
   a. The manufacture and transportation of chemicals within the county increases the probability of such condition.

2. Prevent Contact
   a. Prevent anyone from contacting or driving through the spilled materials.
   b. If it is a gas, dust, or volatile liquid, evacuate surrounding areas after establishing the inner perimeter.
   c. If there is a relatively small amount of hazardous dust or powder, request the fire fighters to attempt to cover it with a canvas, plastic sheet, or other appropriate material.
      - Refer to DOT Guidebook for evacuation distances.

3. Detain Contaminated Vehicles
   a. If available, detain the vehicle from which the spill occurred.
   b. Note any contaminated cargo, and detain persons and property that have contacted the spilled material.
      - The Health Department may need to decontaminate exposed areas.

4. Possible Food Contamination/Fire Hazard
   a. Do not allow anyone to eat or smoke near a spill or provide any source of ignition.
   b. If the carrier (truck) is on fire and the product is a Class "A" explosive, Class "A" poison, or reactive material, the deputy should immediately withdraw and should consider if evacuation is imminent.

5. Explosion Hazard

6. If the material is not known to be a Class "A" explosive or poison, or an unstable or reactive material and the fire has been burning with a direct flame on a closed tank shell for more than 10 minutes, even with the relief valve operating, there should be an immediate evacuation and withdrawal.
   - Refer to DOT Guidebook for recommended evacuation distances.

7. Secondary Contamination
   a. Advise paramedics of possible contamination of victims clothing prior to transport.

I. HAZARDOUS MATERIAL INCIDENT RESPONSIBILITY MATRIX

1. Contra Costa County has adopted a management system for response to hazardous materials spills.
2. This system is outlined in the form of a matrix, which designates the primary responsibilities of responding agencies.

3. Frequently at hazardous materials incidents, agency personnel exercise some reluctance in their initiative because of uncertainty of their role and/or function.
   a. This apprehension can be critical at times adding confusion to an already dangerous situation.

4. It is essential that all agencies who have a responsibility to provide a function during an emergency understand that responsibility and equally understand the other agency's responsibilities.

5. The purpose of the Linear Chart of Responsibility is to establish and identify federal, state, and local responsibilities and activities required to minimize the damage to human health, natural systems, and property caused by the release or potential release of hazardous materials in Contra Costa County.

6. The objectives of this matrix are:
   a. To summarize the primary operational and support systems required to mitigate a hazardous materials incident.
   b. To establish lines of authority/coordination when such an incident occurs.

7. The responsibilities and activities outlined in this matrix will be in effect, as needed, throughout Contra Costa County, incorporated cities, unincorporated areas, and private property.

8. All agencies, in and around Contra Costa County that may have a direct or indirect effect on the mitigation of a hazardous material release are included in this plan of initial actions.
I. POLICY
   A. Patrol and Special Operations Division personnel will utilize teletypes to
document and communicate between law enforcement agencies.

II. PROCEDURE
   A. INCIDENTS REQUIRING TELETYPES
      1. Teletypes shall be sent whenever one of the following situations occur:
         a. Wanted persons, when immediate dissemination of information
            is necessary, and the Investigation Division is not involved at the
time.
         b. Assistance requested from another agency; i.e., notifications,
            follow-up investigations, etc.
         c. Runaways or missing juveniles/adults, when the situation
            indicates immediate action is necessary.
         d. In response to requests for assistance from other law
            enforcement agencies mutual aid.
   B. TELETYPE ISSUANCE PROCEDURES
      1. When teletypes must be sent from the field because of the immediate and
         urgent nature of the request (i.e. an in progress, tactical incident or
         investigation where an immediate or quick action or response to the
         teletype request is needed), the deputy involved will call communication
         personnel and dictate the message.
      2. Whenever the teletype is not of an immediate, urgent nature, the involved
         deputy shall complete an "Administrative Teletype Form (copy attached)
         and forward via mail or fax to the Patrol Division Clerical Support Unit.
         a. Teletypes of this nature are processed during business hours.
      3. Any teletype sent in which the investigation will be conducted by another
         division, the "Refer to" block of the Administrative Message Form” will
reflect the appropriate division commander's name; i.e., when Investigation Division is involved, it will reflect the Investigation Division Commander's name.
I. POLICY
A. Patrol and Special Operations Division personnel will utilize "extra patrol requests and vacation house checks" to maintain the safety and welfare of the community.
B. They will also utilize them as a means of positive public contact and familiarization with specific locations within their beat.

II. PROCEDURE
A. PATROL REQUESTS
1. The primary use of Patrol Request Cards is to inform patrol deputies of a particular police problem at a specific location requiring frequent patrol checks to either resolve or control the problem.
2. Patrol Request Cards can be initiated by patrol personnel who receive information that requires the need for special or selective patrol by dispatch personnel who receive similar information from citizens who telephone the department requesting selective patrol.
3. It is the responsibility of each beat deputy to conduct patrol requests as required.
4. The procedure for maintaining Patrol Request Cards is:
   a. Deputies will secure Patrol Request Cards from beat slots prior to assuming patrol duties.
   b. Patrol Request Cards will be placed on appropriate beat boards.
   c. Each patrol inspection made will be logged on the Patrol Request Card indicating date and time of inspection, observations, and signature of deputy conducting inspection.
5. At completion of the patrol request period, return cards to Patrol or Special Operations Division for necessary disposition.
B. VACATION HOUSE CHECKS

1. The Patrol Station House, Contract City, or Sheriff's Dispatch receives and prepares Vacation House check requests.

2. Calls received by dispatch for vacation house checks will be referred to the beat deputy.

3. Patrol or Special Operations deputies may accept such requests in the field.

4. It is the responsibility of Patrol or Special Operations deputies to conduct checks assigned to their beat.

5. Vacation house checks are to be made on all watches, especially day and evening watches as time permits.

6. Deputies should walk around the residence and make sure all the entrances and accessible vehicles are secure, taking extra precautions during darkness as the homeowner may have returned home.
   a. Use the guidance given by the station house commander, contract manager, or patrol sergeant during times of darkness.

7. When feasible, leave an email or phone message for the homeowner once a week indicating that the residence has been checked.
I. POLICY
   A. Knowledge of what to do when dealing with injured and rabid animals in law enforcement is important because, in most cases involving animal problems, the police are the first to be called.
   B. When deputies are confronted with unattended or injured animals that present a danger to the public or a serious traffic problem that requires prompt action, they may shoot the animal as a last resort of action.

II. PROCEDURE
   A. ADVISE ANIMAL CONTROL TO RESPOND
      1. In all cases where Animal Control is available, the deputy should request they respond, if time and circumstances allow.
   B. PUBLIC SAFETY
      1. Public safety is a top priority, and should be taken into consideration in all cases.
      2. To ensure the public's safety, the following steps will be taken:
         a. If the animal poses no immediate threat to persons, property, or its own well-being:
            • Wait for Animal Control, if possible
            • Keep the animal from injuring people
            • Confine the animal, if possible
         b. If the animal does present an immediate threat, try to isolate the animal until Animal Control arrives.
            • If that is not possible, and the deputy determines it is necessary to kill the animal, the following steps will be taken:
            • Obtain a supervisor's approval, if time allows.
- Protect all bystanders by removal to a safe area behind the shooter.
- Check the area behind and to the sides of the animal to make sure no one will be injured by over-penetration or ricochet of the bullet.

C. SHOOTING THE ANIMAL

1. When shooting the animal in the head the chances of ricochet are reduced by shooting from a 90-degree angle to the point of entry.
2. Shots to the heart are to be used as a last resort because of the possibility of ricochet from the shoulder and rib bones.
3. Shots to the head should be avoided when the animal has been involved in a bite.
4. Head shots
   a. The skull structure of large animals is predominately thick.
   b. There are limited areas where the skull is thin enough for a bullet to penetrate.
   c. The target area or thin portion of the skull plate is located by drawing imaginary lines between the eyes and the center of the ears.
   d. Cattle
      • The target is approximately one inch above the point where the imaginary lines cross.
      • This area can also be identified by hair growing in all directions, commonly referred to as a cowllick
   e. Swine
      • The target is approximately one inch below the point where the imaginary lines cross.
   f. Horses and deer
      • The target is where the imaginary lines cross.
   g. Canines and smaller animals
      • The skull plate is generally not thick enough to prevent bullet penetration by the deputy's duty weapon.

D. ANIMAL BITES

1. Administer First Aid and/or advise victim to seek medical assistance
2. Confine the offending animal
3. Notify Animal Control
4. Try to identify the owner of the offending animal
5. If a bite has occurred, and the animal must be shot, avoid shooting it in the head. The rabies testing procedure requires an intact brain.
E. INJURED WILD ANIMALS
1. Try to locate the animal.
2. Try to confine the animal or maintain visual contact with it.
3. If a bite occurred, administer first aid.
   a. Since rabies is a chief danger in wild and undomesticated animals, advise the victim to seek immediate medical attention.

F. DEAD ANIMALS
1. Deputies will often be notified by citizens of a dead animal in the roadway.
2. Confirm, if possible, the location and confirm the animal is still there.
3. Advise dispatch of the location and type of animal.
4. Dispatch will notify Animal Control for removal.
I. POLICY
   A. Patrol and Special Operations personnel will be aware of the location of the General Services Division's Radio Vaults and will respond to all entry alarms at those locations.

II. PROCEDURE
   A. RESPONSE TO INTRUSION ALARMS
      1. In the event of an intrusion alarm at a radio vault site, the response shall be as follows:

      B. RADIO VAULT SITE LOCATIONS
         1. Patrol and Special Operations members shall familiarize themselves with the following radio vault locations which may be within their area of assignment:
            a. 
            b. 
            c. 
            d. 
            e. 
            f. 
            g.
I. POLICY
A. Deputies will respond to alarms as an in-progress situation with due regard to the potential dangers involved.
B. The deputies’ first concern will be public and officer safety.
C. Protection of property will be secondary.

II. PROCEDURE
A. RESPONSIBILITIES OF RESPONDING DEPUTIES
   1. This type of call requires a multiple unit response until the first deputy on the scene can advise if additional units are needed.
B. BURGLARY ALARMS
   1. 
      a. 
   2. 
      a. 
C. AUDIBLE ALARMS
   1. Deputies encountering audible alarms in the field will advise dispatch of the name and address, the location and name of the alarm company.
D. REPORTING PROCEDURES
   1. In order to alleviate the continuous response to false alarms, the assigned deputy will document all incidents involving malfunctioning alarms.
2. Incidents for mechanical alarms will be coded as a 10-33 (UNF, RTF or UTL), with written report being required when something suspicious is found, or the deputy discovers some type of criminal activity.

E. RESPONSE TO COMMERCIAL ALARMS

1. 

   a. 

   b. 

   c. 

F. RESPONSE TO PANIC ALARMS

1. 

2. 

G. FALSE ALARMS

1. A location that has an alarm system that malfunctions continuously may be put on a non-response status by the patrol sergeant, station house commander or OD. County Ordnance 54-12.016 specifically applies.

2. Also refer to County Ordinances 54-12.004; 54-12.006; 54-12008; 54-12.010; 54-12.014; 54-12.028. Any violation of any one of these ordinances is an infraction, and shall constitute a public nuisance.
I. POLICY.
   A. The Patrol and Special Operations Division Commanders recognizes the need for a variety of force options for members of the Patrol and Special Operations Divisions. Rifles and shotguns are two additional options for deputies to use in the field following the guidelines of the agency Use of Force Policy. This policy is established in order to provide guidance regarding the carrying, handling, deployment and use of the patrol rifle and shotgun by division personnel. The intent of the policy is to promote the safety of both the public and employees.

II. GENERAL INFORMATION
   A. AUTHORIZED WEAPONS AND MUNITIONS
      1. The authorized rifle is a Bushmaster and/or Colt brand AR-15 series of rifle. The rifle will have a standard or adjustable stock. The rifle will have a minimum barrel length of 16 inches as defined by the manufacturer or California Law (PC 33210). The rifle will be of .223 caliber/5.56 mm.
         a. The authorized duty round for the patrol rifle is the .223 caliber, 55-grain FMJ (full metal jacket) bullet. Authorized duty rounds will be from a manufacturer approved by the Sheriff's Training Division and duty rounds will be obtained from Sheriff's Training.
      2. The authorized shotgun is a Remington brand, model 870, pump-action, 12 gauge, 18-inch barrel, standard stock, bead and/or rifle sighting system.
         a. Although this particular weapon is capable of firing a multitude of different munitions for different applications, the only munitions authorized for duty use are the 12-gauge (8 or 9-pellet) 00 buckshot round and the 12-gauge rifled slug.
B. TRAINING

1. Deputy Sheriffs shall successfully complete a basic course of instruction in the deployment and use of the patrol rifle prior to being authorized to carry and deploy the patrol rifle during their shift.

2. The course shall be conducted by a trained rifle instructor and will consist of classroom instruction, demonstration, practical application on the range, a written test, and qualification. When practical, this Basic Rifle Course will be presented and conducted following a POST-approved course outline and course of instruction (to allow the employee to meet the requirements of PC 33210 when handling and deploying other agency weapons.)

   a. Qualification with the Patrol Rifle will consist of firing 31 rounds on an approved course of fire. To qualify, deputies must strike the target a minimum of 25 times (80%). The approved course of fire is:

<table>
<thead>
<tr>
<th>Distance</th>
<th>Action/Drill</th>
<th># of Rounds</th>
<th>Time (Secs)</th>

</tbody>
</table>
b. Requalification with the Patrol Rifle will consist of completing the same course of fire as done for qualification.

3. Annual training with the patrol rifle will occur after the initial training class. Employees who deploy the rifle will have qualified within the last twelve months with the rifle. Employees who have not qualified with the rifle in the last twelve months will not deploy the weapon.
   a. Annual training will consist of four hours of instruction on the rifle and will include qualification with the rifle.
      • Training during years ending in an odd number will be performed during the day.
      • Training during years ending in an even number will be performed during reduced daylight hours (night).
   b. Copies of completed training rosters will be maintained in the deputy's division training file.
   c. The original training roster will be forwarded to the Sheriff's Training Unit.

4. The Patrol Administrative Sergeant will maintain a roster identifying the date each deputy completed the Basic Rifle Course and their current qualification date. The Patrol Administrative Sergeant will compile this listing on a monthly basis and provide this listing to the Patrol Division Administrative Lieutenant. The Division Lieutenant will forward the roster to Patrol and Special Operations Division Managers on a monthly basis.

5. Deputy Sheriffs will train annually with the patrol shotgun. The training will consist of range instruction by a certified range instructor.
   a. The training will include demonstration and practical application on the range.

C. USE AND DEPLOYMENT

1. When properly deployed, the patrol rifle and shotgun provides an enhanced tactical resource, with each of them filling a different tactical niche.

2. The patrol rifle and shotgun can be especially more effective than a sidearm when dealing with certain critical and life threatening situations, to include overcoming heavily armed resistance, achieving containment and saving lives. Such situations include, but are not limited to:
   a. Violent and armed suspects who are wearing body armor
   b. Subjects armed with high capacity automatic or semi-automatic weapons
   c. Multiple armed suspects

3. All usages of the patrol rifle and shotgun shall be in accordance with the Department use of force policy.
   a. When not in use, the patrol rifle and shotgun shall be secured in the patrol armory. Weapons shall not be stored in vehicles.
D. DOCUMENTATION

1. Any incident involving the use of the patrol rifle or shotgun will be fully documented in a Department report, and will include the following specific information:
   a. The name of the Sergeant/Deputy deploying the weapon
   b. Circumstances surrounding the deployment of the weapon
   c. Number of rounds fired
   d. Distance between the suspect and the Sergeant/Deputy deploying the weapon
   e. Area of suspect’s body struck by the fired rounds
   f. Injuries sustained by the suspect and subsequent medical treatment
   g. Any collateral damage (unintended injured persons, property damage, etc.)

E. MAINTENANCE AND CARE OF THE PATROL RIFLE AND SHOTGUN

1. Patrol Rifles will be maintained according to the guidelines of the manufacturer and common firearm maintenance procedures.
   a. Operators are responsible for cleaning and lubricating rifles after they have gotten wet or become soiled.
   b. Managers are responsible for ensuring that their assigned rifles are cleaned and lubed minimally at least at each shift change.
   c. Managers are responsible for reporting completed maintenance to the Patrol Division Administrative Sergeant.
   d. The Patrol Division Administrative Sergeant will maintain a roster of routine maintenance that is reported as having been completed by Patrol Division Managers.
   e. Annually, Patrol Division Rifles will be inspected, fired, and serviced by an armorer.
   f. Rifles that require service beyond the capabilities of Department Armorers will be returned to the manufacturer or their designee for services.

2. Rifles or shotguns found to be defective shall be immediately forwarded to the patrol armory for repair and replacement.

3. Patrol rifles will be maintained in their original factory assembled condition and will not be modified.
I. POLICY
   A. The Department recognizes the value and need for the use of less lethal weapons under certain circumstances.
   B. The use of such weapons will follow the Department’s policies and procedures pertaining to the use of force.

II. DEFINITIONS
   A. Cover Officer: An officer armed with lethal force that is covering a subject.
   B. Sponge Round: The Safariland Group eXact iMpact 40mm foam sponge round.
   C. 40 mm Launcher: The Defense Technologies Number 1325 40mm single shot gas gun.

III. PROCEDURE
   A. GENERAL PROVISIONS
      1. The less lethal weapons system is intended for use by trained sergeants and deputies to defend themselves and the public against combative, resisting, and or violent individuals.
      2. Each patrol supervisor’s vehicle and those deputies’ vehicles as assigned by the supervisor will be equipped with the 40mm launchers.
      3. Only sergeants and deputies who have been trained in the use of the 40mm launcher will deploy the sponge round.
   B. DEPLOYING LESS LETHAL ROUNDS
      1. All users of the 40mm less lethal system must remember that any use of force must be objectively reasonable and necessary to protect themselves and others or to overcome resistance to lawful authority.
      2. Whenever possible, the deploying officer will warn the intended target of the weapon’s eminent use in an effort to have him/her surrender to the officer’s lawful authority.
3. Prior to deploying the sponge round, the deploying sergeant/deputy will give a loud, clear warning to other personnel at the scene.
   a. This is done to advise all personnel of the impending use of force so they may quickly move to affect the subsequent arrest of the subject and to minimize the potential of sympathetic weapons fire.

4. Primary target areas for the Exact Impact rounds will be lower torso, buttocks, thighs, and lower leg area.

5. Secondary target areas will include the upper torso, arms, elbows and hands.

6. The groin, head and neck should be avoided. The Sponge Round should not be deployed at distances of less than 10 feet.

C. ROLE OF THE COVER OFFICER

1. Deployment of the less lethal weapons system will always be a coordinated effort between the deputy/sergeant armed with the 40mm rifle and a second deputy/sergeant armed with their department issued sidearm, shotgun or rifle.

2. The cover officer’s role is to protect the officer armed with the less lethal system should the need arise for the immediate deployment of lethal force.

3. At no time will the less lethal system be deployed without a cover officer.

D. HANDLING OF INJURED SUBJECTS

1. In all cases where the sponge round is deployed and a person is hit, they will be transported to a medical facility for evaluation and treatment.

E. DOCUMENTATION

1. All uses of the less lethal weapons system will be documented in a department crime report.

2. The report should minimally contain the number of less lethal rounds fired, the distance they were fired from, the impact area, the injuries caused and actions taken to treat those injuries.

3. Photos of injuries will be taken and submitted to evidence.

4. When possible, the expended less lethal projectile will be recovered and placed into evidence.

F. MAINTENANCE AND CARE OF THE LESS LETHAL WEAPONS

1. The primary responsibility for care and maintenance of the 40mm weapons system will rest with the department armorer.

2. Routine maintenance and repairs will be documented and a copy of all records maintained in the armorer’s files.
I. POLICY
A. Deputies responding to, becoming involved in and/or investigating a civil situation will be committed to preserving the peace and will ascertain whether a crime has been committed.
B. They will remain impartial, they will express themselves in such a manner that their comments will not and cannot be taken as legal advice.
C. Deputies will never recommend a particular law firm or attorney when suggesting that legal advice be obtained.

II. GENERAL INFORMATION
A. Civil situations arise over disputes involving landlord/tenant, strikes, estranged or divorced couples, property boundary, repossessions, liens, and community property and business transactions.
B. The variety of problem situations arising from civil disputes and their related ramifications are almost endless.
C. It is generally not known until the deputy responds and investigates the situation whether it is civil or criminal in nature.
D. Whether civil or criminal, these situations can become police problems, which require immediate attention to prevent possible criminal acts arising out of, or a further escalation of criminal acts from the dispute.

III. PROCEDURE
A. LANDLORD/TENANT DISPUTES
1. Often, landlord/tenant disputes are considered to be civil in nature only; however, such disputes often involve a misdemeanor violation of the Penal Code or result in some type of violence.
2. It is important for deputies to be aware of both the practical and the legal issues involved.
3. Lockout of Tenant.
a. Usually conducted for non-payment of rent. This lockout procedure is a misdemeanor under Penal Code Section 418.

4. Seizure of Tenant's Property
a. Also, conducted for non-payment of rent and also occurs during a lockout. This procedure is also a misdemeanor under Penal Code Section 418.

5. Removal of Doors and Windows
a. Normally conducted in an attempt to evict the tenant.
b. Even though the destruction may be to the landlord's own property, such acts may constitute malicious mischief against the tenant, thus a violation of Penal Code Section 594.

6. Termination of Services
a. Also, a common practice is the interference of the tenant's ability to obtain services such as gas, electricity, and water.
b. Such action makes a landlord liable in a civil action under California Civil Code Section 789.3.

7. Trespass
a. A landlord will often enter a tenant's premises without prior permission in order to harass or to snoop around.
b. This conduct is considered to be a trespass constituting a misdemeanor under Penal Code Section 602.5.
c. However, if entry is for repairs, to investigate smoke, or entry at will is consented in the lease, then no trespass occurs.

8. In summary, even though a landlord may have proper legal grounds for evicting a tenant, it is unlawful for him to use any of the above methods.
a. The landlord's recourse is to bring a civil suit, called an "unlawful detainer" action and have the tenant legally evicted.
b. The deputy's objective is not to make or encourage an arrest, but to try to achieve a lasting solution to the conflict by explaining to the parties what conduct is not lawful and by suggesting alternative solutions that are lawful.
c. The deputy can often resolve a dispute by:
   - Informing the landlord of any criminal violations committed.
   - Explaining to the landlord the legal grounds for eviction process; i.e., lawful detainer, attorney, small claims.
   - Explain to the tenant legal alternatives open; i.e., housing authorities, health department, attorney.

B. ARRESTS RESULTING FROM LANDLORD/TENANT DISPUTES
1. While deputies should not encourage an arrest, they should ultimately take whatever police action is necessary under the circumstances.
2. Patrol and Special Operations members must note that most offenses related to landlord/tenant disputes are misdemeanors.
   a. Consequently, no arrest should be made unless the offense occurred in deputy's presence.

3. If an arrest is warranted (i.e., assaults, batteries, etc.). The deputy will advise the citizen of private person arrest requirements and procedures.

C. REPOSSESSION DISPUTES

1. Patrol and Special Operations members must retain a neutral position in their relationship with both labor and company management.

2. The deputy's primary responsibility at the scene of a repossession dispute is to keep the peace.

3. The following guidelines are established to aid in this type of dispute:
   a. In no event is a deputy authorized to give legal advice.
   b. Parties should be advised to contact their respective attorneys.
   c. Investigate all alleged criminal offenses committed by involved parties and take appropriate action.

4. Deputies should be knowledgeable of the following:
   a. There are three groups who may repossess property:
      • The seller and his full-time employees.
      • A bank or finance company who has purchased the debt from the seller.
      • Private repossession:
         • Must have a State license.
         • Repossessors shall carry a pocket card.
   b. As a rule, repossession occurs when the repossessor gains entry to the collateral or when the collateral becomes connected to a tow truck (B&P 7507.12).
      • EXAMPLE: If the repossessor has entered the vehicle or the vehicle has been connected to a tow truck repossession has occurred.
   c. Buyer's Rights
      • The buyer, buyer's spouse, or other persons entrusted with the property have the following rights:
      • A right to object, either orally or by conduct, to the repossession of the property.
      • Objection must be made before the repossessor has made entry to the property to be repossessed or the property has been connected to a tow truck.
EXAMPLE: The repossession has not entered the automobile or connected the automobile to a tow truck.

- If the repossession is complete and there is other personal property involved; i.e., clothing, tools, etc., in a vehicle, the buyer has a right to retain the property provided if it is not an integral part of the repossessed property.

d. In all cases where property is exchanged a report must be written.

D. LABOR/MANAGEMENT DISPUTES

1. There is no secret formula for handling labor disputes.

2. Decisions made by deputies at the scene of a labor dispute must be based on sound judgment.

3. The following guidelines are set forth to aid patrol members in handling labor disputes:

   a. Primary Functions of Patrol Members

   - Maintain and keep the peace.
   - Prevent injury to involved parties.
   - Protection of property.
   - Responsibilities at the Scene:

   - Patrol vehicles should not enter company property except for official business.
   - Patrol vehicles are not to be used as an escort for people coming or going from a facility.
   - Do not assume a fixed post except under unusual circumstances.
   - Avoid spending prolonged periods of time parked in the same location.
   - When a problem is identified, notify dispatch if additional units should respond for cover purposes.
   - Attempt to establish a rapport with both picket captains and company security people.
   - Avoid acceptance of food and/or beverages from either involved party.

   b. Response to Reported Problems

   - Confirm that a problem exists and the nature.
   - Advise as soon as possible if additional units are needed. (No more deputies should respond than are required.)
• Avoid an aggressive attitude; i.e., immediately putting on a riot helmet and/or bringing the baton out with more flourish than necessary.

• Attempt to maintain as low a profile as possible.

• Exit vehicle as soon as practical and attempt to get as close to the participants as possible and ascertain what is occurring.

• Advise the field supervisor, station house commander or O.D. as soon as practical as to the nature of the problem.

c. Criminal Acts at the Scene

• Except in incidents involving on-view felonies, arrest will be the last resort in handling picket line problems.

• The following guidelines are established for criminal acts:
  • If the act is a misdemeanor where the responsible is known, conduct appropriate investigation.
  • EXAMPLE: If the responsible is cooperative and will leave the area after the report is written and the victim desires to pursue the matter, refer the report to the District Attorney for prosecution.

• In the event the victim wishes to exercise a citizen's arrest, conduct normal procedures for citizen's arrest and cite release the responsible if cooperative.

• If the responsible is less than ideally cooperative, physically taking the person into custody may be necessary.

• On-view felonies will be handled as any other felony investigation.
  • Again, the immediate focus of the deputy should be on alleviating the problem at the lowest possible level.

d. Disruptive Acts at Picket Lines

• A subject conducting himself in a manner that might be agitating other pickets should be brought to the attention of the picket captain, requesting his behavior be corrected or he should be removed from the line.
  • EXAMPLE: This behavior can range from consuming alcoholic beverages to wearing a mask, carrying weapons, or actually committing a crime.
Further disruptive acts normally occur in the stopping or delaying of vehicles crossing the picket line.

Management and labor representatives have the right to talk to the driver of a vehicle that approaches the picket line.

The stopping or delaying of vehicles should not impede the normal flow of traffic or pedestrians in the area.

e. Use of Specialized Personnel

The station house commander or patrol manager, whenever possible will assign those deputies who have received specialized training in labor management disputes to pickets.

A current list of trained deputies is maintained by the Assistant Division Commander.

The use of canine units will not be utilized on strike assignment except in cases where a deputy is actually endangered.

f. Violations of an Injunction

Representatives of labor and management may call a deputy’s attention to violations of an injunction and insist that the injunction be enforced.

It is not the duty of law enforcement to enforce an injunction.

Exceptions would be if violations of the injunction also violate a provision of the law or the court order is directed to the Sheriff ordering the enforcement.

NOTE: Violations of an injunction are treated as contempt of court. If either party desires legal recourse, such action must be filed in the court of issuance.

g. Incident Reports

Deputies assigned to strikes will document, on a standard report form, all incidents occurring and/or action taken.

These reports will be for information in nature.

h. Commonly Used State Statutes

The following is a list of those Penal Code and Vehicle Code sections that may be applicable in connection with labor disputes.

This list is not intended to be all inclusive and patrol members should familiarize themselves with applicable codes:
Penal Code:

- 69  Resisting officer
- 148 Resisting, delaying, interfering
- 148.1 False explosive report
- 240 Assault
- 242 Battery
- 245 Assault with deadly weapon
- 403 Disturbance of public meeting
- 404 Riot
- 404.6 Urging riot
- 405a Lynching
- 406 Rout
- 407 Unlawful assembly
- 409 Remaining present at place of riot
- 415 Disturbing the peace
- 451 Arson
- 455 Arson-building
- 453 Possession of flammable materials
- 552.1 Exemptions-union activities
- 588a Throwing injurious substance on highway
- 588b Breaking down barrier, sign, or light on highway
- 594 Vandalism
- 647c Obstruction of street, sidewalk or other place open to public
- 647f Disorderly conduct, drunk
- 653m Annoying-threatening phone calls
- 25400 Possession of concealable weapon
- 25850 Carrying loaded firearms
- 18710-18725 Possession of destructive devices

Vehicle Code:

- 20002a Hit and run
- 21106b Crosswalks, pedestrians
- 23331 Pedestrian yield
- 21955 Jaywalking
• 21956  Walking on roadway
• 23152  Driving under the influence
• 23110a Throwing substance at vehicle
• 23110b Throwing substance at vehicle with intent
• 23112b Depositng rocks or dirt on highway
• 23221 Drinking in motor vehicle on highway
• 23222 Possession of open container
• 23223 Storage of open container
• 23224 Possession by minor

E. OTHER CIVIL DISPUTES

1. Frequently, a deputy will receive a call of a business dispute, petty theft, or disturbance that turns out to be an argument over payment for goods or services.
   a. In many of these disputes it is often difficult to determine whether they constitute a civil dispute only or also involve a criminal offense.
   b. Accordingly, prior to deciding upon a course of action, the deputy must analyze the total circumstances to assure himself of the true nature of the alleged grievance (i.e., civil and/or criminal) coupled with the options available to him.

2. In the event that no crime can be established, deputies should conduct the following:
   a. Maintain the peace.
   b. Advise the complaining party or parties that no crime exists or was committed.
   c. Attempt to have the parties resolve the dispute.
   d. Do not take sides.
   e. Do not use, or allow to be used, your position as a police officer to compel payment or similar action by any party.
   f. Do not use the threat of arrest or other police action to compel civil action by either party.

3. If the parties cannot or will not informally resolve their dispute, assist in exchanging identifying information and advise them to contact their attorneys or file a small claims suit, etc.

4. If the deputy feels that criminal action might be involved, (i.e., consumer fraud, theft by false pretenses, etc.) they should:
   a. In instances of possible felony violations, write a report and route to Investigation Division for review.
b. In instances involving possible misdemeanor violations, refer report to the Misdemeanor Complaint Unit/District Attorney's Office for review and possible criminal action.
I. POLICY

A. It is neither the intention nor the desire of the Patrol or Special Operations Division to suppress or restrain lawful activity.

B. The Patrol and Special Operations Division will expend whatever resources are necessary to protect the rights of any person or group to conduct a peaceful and lawful demonstration.

C. However, unlawful activity, whatever its guise, requires prompt and effective action by the Patrol and Special Operations Division.

D. The Patrol and Special Operations Division will take appropriate legal steps to discourage unlawful conduct whenever it occurs.

II. GENERAL INFORMATION

A. DEMONSTRATIONS/CIVIL DISTURBANCES

1. Tactics employed by dissidents engaged in disruptive activities frequently include efforts to draw the police and other public officials into responses likely to produce violence and injury to participants and thus garner support for their cause.

2. Patrol and Special Operations members will resolve disruptive situations in a manner that will minimize the potential for violent confrontations by performing assigned tasks within the framework of the following principles.

III. PROCEDURE

A. FIRST DEPUTY AT SCENE

1. The first deputy at the scene of a disturbance should observe the situation from a distance and evaluate it before acting.

2. If the situation demands, the deputy will notify the area supervisor.

B. COORDINATION OF EFFORT
1. The patrol supervisor will coordinate deputy’s actions.

2. Only requested units will respond to the scene.
   a. Deputies will report to the supervisor after parking their vehicles in one group in an area away from the crowd.
   b. One deputy will be assigned to guard the vehicles against damage.
   c. Individual deputies should avoid driving their cars into the center of the crowd and operating individually.
   d. If possible, patrol supervisor make contact with demonstration coordinator to negotiate peaceful resolution.

C. ORDER TO DISPERSE
1. A dispersal order must be given before a person can be guilty of remaining at a place of riot, rout, or unlawful assembly.

2. If the supervisor in charge at a disturbance scene decides to declare an unlawful assembly, such supervisor should go as near to the crowd as is safe and make an audible statement using a Legal Form of Dispersal Order. (Issued Dispersal Order Pocket Card)

3. Use public address system when issuing order to disperse

4. If possible have a unit at the back of the crowd to make sure dispersal order is able to be heard.

5. Ensure there is a safe exit route for demonstrators to leave the area

D. RESPONSE TO DEMONSTRATIONS
1. Deputies assigned to a demonstration will strive to maintain an outward appearance of calmness, whether the task involved is simply standing by, protecting demonstrators from hostile "on-lookers" or making necessary arrests of violent demonstrators.

2. Patrol and Special Operations members will treat demonstrators, "on-lookers," or counter demonstrators equally.

E. RESPONSE TO VIOLENT CONDUCT
1. Where a demonstrator uses physical violence upon another person or property, patrol members should promptly make an arrest unless the supervising sergeant at the scene concludes that making the arrest would be unnecessarily risky in reducing the ability of members to perform their duties effectively.

F. RESPONSE TO OTHER ILLEGAL CONDUCT
1. Arrests will occasionally have to be made because of a demonstrator's non-violent but nevertheless illegal conduct.
   a. Example: illegal obstruction of the streets or of a building entrance.

2. The supervisor in command at the scene will decide if such arrests are to be made.
3. Before any such arrest is made, demonstrators will be warned that they must move or risk arrest.

G. COORDINATION OF PATROL AND SPECIAL OPERATIONS ACTIONS
   1. Deputies will maintain a disciplined and coordinated response at the scene of a demonstration.
   2. Deputies will not act alone unless a loss of life or great bodily harm could result from the conduct of demonstrators.
   3. When mere property damage is imminent, members will coordinate their response through assigned supervisors and act as directed.
   4. Supervisors will remain at the scene and continually seek information concerning location and number of demonstrators, emotional condition of the crowd, and resources available to maintain order.

H. SUPPLEMENTARY INFORMATION
   1. Riot experience throughout the United States has shown that in many cases minor incidents involving the police were responsible for initiating the trouble.
   2. With this in mind, the following procedures will be observed unless specific orders to the contrary are issued by competent authority:
      a. Arrests must be "thoroughly" justified and only necessary force must be used in making them.
      b. Incidents must be handled as quickly as possible without creating a disturbance or attracting other persons.
      c. Areas of an incident or small riot should be closed off and ingress not allowed.
      d. Persons wishing to leave should be allowed to do so.
      e. The Patrol or Special Operations Division Commander or their designated alternative will be responsible for field operations involving civil disturbances.
   3. Reports from the field will go directly to the Patrol or Special Operations Division Commander or designee in overall command.
      a. The employee in overall command will have the responsibility for deciding whether it is necessary to notify the Sheriff-Coroner.
I. POLICY.
   A. The Automatic External Defibrillator (AED) will be available for emergency treatment of victims exhibiting symptoms of sudden cardiac arrest who are unresponsive and not breathing.
   B. Staff will be familiar with the use of the AED as part of the regular CPR training.
   C. This device is not meant to replace staff trained in CPR and does not eliminate the need for basic CPR.

II. PROCEDURE
   A. AED Fixed Locations
      1. Field Operations Building
         a. Second floor copy room mounted on wall
      2. Bay Station
         a. Mounted on wall inside main office
      3. Delta Station
         a. Mounted on the hallway wall outside of sergeant’s office.
      4. Muir Station
         a. First floor mounted on hallway wall next to J-Team offices.
      5. Valley Station
         a. Mail room area hallway
      6. Blackhawk Police
         a. Blackhawk office wall
      7. Danville Police Department
         a. Mounted on wall between locker and restrooms
      8. Lafayette Police Department
         a. Patrol work area
9. Orinda Police Department
   a. Mounted on wall outside of detective office

10. Marine Patrol
    a. Mounted on kitchen wall

B. AED Mobile Locations

1. The AED’s will be assigned to designated patrol vehicles. The vehicle will have signage inside the driver’s area stating that an AED is contained in the vehicle.

2. The AED will be inventoried and checked for serviceability by the driver of the patrol vehicle at the beginning of each shift and noted in the unit history when the vehicle is being used.

3. AED’s shall be assigned to the following mobile locations:
   a. Station House supervisor vehicles
   b. Marine Patrol
   c. Resident Deputy vehicles
   d. SWAT

4. When advised by Dispatch of a medical call in a county patrol area, deputies should consider responding to the medical call when:
   a. Not assigned to another call for service
   b. When based on the nature of the medical call, the use of an AED could be of benefit. These types of calls are similar but not limited to:
      - Drowning
      - Heart attacks or strokes
      - Difficulty breathing

C. AED Maintenance

1. AED’s shall be checked monthly to ensure they are properly functioning.
   a. Small window on front has a blinking green light
   b. Display stating AED is “OK” operating properly and battery level displays two or more bars
   c. Examine the case looking for damage and cracks, battery pins bent or discolored.
   d. Examine electrodes for damage and missing wires.

D. AED Use

1. Staff should be trained and recertified in the use of the AED.

2. When a medical emergency presents itself, trained staff should:
   a. Immediately notify Sheriff’s Dispatch via radio or by phone (925-646-2441) of the medical emergency and start Emergency Medical Services (EMS).
b. Determine if the subject experiencing the medical emergency would benefit from use of the AED.

3. Turn on the AED by pressing the power button and follow the directions given by the AED.

4. Open the AED and place the electrodes according to the audible/written/pictured directions.
   a. **WARNING** – do not place the electrodes directly over implanted pacemaker. Place at least one inch from device.

5. Refrain from touching the patient after application to allow the AED to analyze cardiac rhythm.

6. If a shock is advised by the AED, stand clear and push button to deliver shock. This cycle will repeat until 3 shocks have been delivered as programmed or until stable cardiac rhythm is established.

7. Re-check for breathing and airway obstructions and evaluate for CPR.

8. Subject is to be transported by ambulance to medical facility.

E. Documentation

1. Following the use of an AED, a police report will be written documenting the life saving measures taken on the patient by Sheriff’s Office personnel.
   a. A copy of the report will be routed to the Assistant Patrol Division Commander.

### I. POLICY

A. The Special Operations Division will maintain a Marine Services Unit to protect lives and property on the waterways while promoting boating safety through education and enforcement. Comprised of the Marine Patrol and the Infrastructure Protection Team, the Marine Services Unit exists to further the mission of the Office of the Sheriff by providing the most efficient and effective on-water law enforcement services possible.

### II. PROCEDURE

A. MARINE PATROL

1. The primary function of the Marine Patrol is to maintain a proactive approach towards the protection of the lives and property of persons on the waterways within Contra Costa County.

2. Additional responsibilities include, but are not limited to, the following:
   a. Enforce all applicable laws and regulations governing the operation of vessels.
   b. Investigate all boating accidents occurring on county waterways.
   c. Investigate thefts relative to on-water vessels and related equipment.
   d. Conduct safety inspections of vessels and provide boating safety education to the boating community.
   e. Remove hazards to navigation through continuous abandoned vessel abatement.
   f. Conduct search and rescue operations.

3. The administration of the Marine Patrol Unit including the care and maintenance of all patrol vessels, vehicles, and equipment will be at the direction of the Field Operations Bureau Assistant Sheriff, the Special
Operations Division Commander, and the Marine Services Unit Commander.

4. Marine Patrol members shall perform their duties as specified within the Marine Services Unit Manual.

5. Emergency Operation of patrol vessels and vehicles:
   a. The emergency operation of patrol vessels and vehicles shall be conducted in accordance with those procedures outlined in the Marine Services Unit Manual and CCCSO Policy 1.06.53, Code Three Vehicle Operation.

B. INFRASTRUCTURE PROTECTION TEAM

1. The primary function of the Infrastructure Protection Team is to enhance the security of the critical infrastructure within the Bay and Delta regions. The Infrastructure Protection Team works closely with the United States Coast Guard, allied agencies, and critical facilities to detect, deter, and defeat any potential threats to public safety.

2. Additional responsibilities include, but are not limited to, the following:
   a. Conduct waterborne patrols designed to establish a visible deterrent presence and obtain awareness of suspicious activity in the vicinity of critical infrastructure.
   b. Assist the United States Coast Guard by providing assistance with the escort of vessels containing extremely hazardous cargo within the county.
   c. Conduct scheduled and unscheduled enforcement of established security zones in waterways near critical infrastructure and key resources within the county.
I. POLICY
   A. The mission of the Sheriff's Air Support Unit is to enhance community safety, protect life and property, and assist Sheriff's ground patrol and marine patrol units in their capabilities to provide law enforcement services.
   B. The air crew will operate on a varied schedule based upon factors to include the time of year, weather conditions, and department needs. The air crew places an emphasis on safety above all other factors. As such, air crew members will not conduct air operations during periods of reduced visibility to include heavy rain, heavy fog, or low clouds.
   C. The Air Support Unit Lieutenant will provide all stations and Sheriff's Dispatch with a monthly schedule.

II. PROCEDURE
   A. WATCH COMMANDER RESPONSIBILITIES
      1. When Air Support crews are not on duty, the Watch Commander can authorize a call-out.
         a. Prior to authorizing a call-out, the Watch Commander should consider the following:
            • Type of incident (search and rescue, escapee, major felony incident, etc.).
            • Duration of incident.
            • The air crew will require approximately one hour to arrive on scene.
         b. The Watch Commander will notify Dispatch of the call-out authorization. Dispatch will need the following information:
            • Type and Location of incident.
            • Weather conditions at the scene.
• Any hazards to the aircraft (news aircraft, EMS aircraft, etc.).
• The phone number of the Incident Commander at the scene.
• The applicable radio channel.

2. The Tactical Flight Officer will check in with the incident commander via radio and request the following information:
   • Description of involved vehicles and persons (race, clothing description, color of hair, hats, etc.).
     • The descriptions should be of a type useful to an air crew.
   • Direction of travel, time element, etc.

B. PATROL SERGEANT/DEPUTY RESPONSIBILITIES

1. Call-Out
   a. Determine the availability of the Air Support Unit via Dispatch.
   b. State the type of incident (missing person, major felony, etc.).
   c. Request ETA to the scene.
   d. The Air Unit will monitor the proper frequency while en route to the incident.
   e. Communicate geographical location of request (use map coordinates and or major intersections/landmarks).
   f. Detailed descriptions of vehicles and directions of travel (color, body style, major damage, headlight out, etc.).
   g. Detailed descriptions of persons/suspects (clothing, hair color, race, hat, etc.).

2. Air Support Unit response to the scene:
   a. May use patrol unit roof number for unit identification.
   b. All directions will be referenced to left, right, or straight ahead, using the directing deputy’s body as a reference point, as opposed to compass directions.
   c. During the hours of darkness, leave the patrol car amber lights on for easy recognition by the helicopter crew.
   d. After making radio contact with the Tactical Flight Officer, Deputies should use a flashlight to identify their location.

3. After Hours Call-Out by Sergeants/Deputies
   a. Notify Dispatch of the call-out request.
   b. Dispatch will notify the Watch Commander.

4. Off-Site Landings
   a. Determine suitability of landing zone (grass, dirt).
• The landing zone must be at least 100' by 100'.

b. Identify obstructions and hazards to aircraft via radio.
c. Set markers and assign patrol cars to the landing zone.
d. A flight officer may exit the helicopter after landing and position themselves at the rear of the helicopter for safety.
e. Deputies will not approach the helicopter until directed by the flight officer or pilot and, when directed, approach only from the front of the helicopter.

5. All flights originate at Buchanan Field in Concord. The flight operations office is located at 500 Sally Ride Dr. #500 (Buchanan Field), Concord.
a. The office phone number is 646-5135.

C. NOISE COMPLAINTS

1. If Dispatch receives any complaints from citizens about the noise created by a S.T.A.R.R. helicopter the dispatcher answering the call will advise the citizen of the nature of the call.
a. No information of a sensitive or compromising nature should be released.
b. Dispatch will obtain the citizen's name and phone number so that they can be contacted by the Watch Commander or his/her designee when time permits.

D. ON-DUTY RESPONSE

1. It will be the responsibility of the Tactical Flight Officer to monitor Sheriff's radio to be aware of pending details.
2. A S.T.A.R.R. helicopter will respond to details that can be handled by the air when appropriate, i.e. prowlers, area checks, 415 motorcycle, 602M vehicles, suspicious circumstances, etc.
3. The Tactical Flight Officer will notify Dispatch that they are on the channel and handling the call.
4. The air crew will decline any detail if safety is a concern.

E. REQUESTS BY OUTSIDE AGENCIES FOR AIR SUPPORT

1. Any request by outside agencies must be approved by the Air Support Unit lieutenant or the on-duty Watch Commander.
2. Information regarding the request will be documented by Dispatch on the S.T.A.R.R. Call-out Information Form.
3. Dispatch will contact the aircrew.
4. Only Contra Costa County Tactical Flight Officers will be used for after-hours call-outs, including requests made by other agencies.

F. LANDINGS

1. The air crew will advise Dispatch of any landings.
2. The types of landings include:
a. SCHEDULED LANDINGS
   • When a S.T.A.R.R. helicopter lands at an airport.

b. OFF-SITE PRECAUTIONARY LANDINGS
   • These landings are likely due to some type of urgent problem aboard the helicopter.
   • The aircrew may request ground units to respond to the landing site.
   • The ground units may be needed to provide security for the helicopter.
   • Dispatch does not need to take any special action for these landings.

c. OFF-SITE ENFORCEMENT LANDINGS
   • The air crew may make an off-site landing to perform enforcement actions, medical assists, or for deputy rescue.
     • Dispatch will be advised of the landing.

d. EMERGENCY LANDING
   • If an emergency landing is declared, the aircrew will issue an 11-99 call and give the location of the incident if possible.
   • Dispatch will have any patrol units in the area respond to the location Code 3, as well as dispatch fire and ambulance units.
I. POLICY

A. In the event of a major medical emergency, where it is deemed necessary to request outside assistance from a Rescue Aircraft Unit, under normal circumstances, Fire Department Personnel will initiate the dispatch of the appropriate Rescue Aircraft needed.

B. In the event that Fire Department Personnel are not available or cannot respond to the location, Sheriff's Office Personnel may be required to determine if Rescue Aircraft is appropriate.

II. GENERAL INFORMATION

A. Due to procedural requirements the STARR air crew, the CHP helicopters, and the East Bay Regional Park EAGLE air crews are the only local area Rescue Aircraft listed on the call-up list.

B. The STARR air crew and the CHP Helicopters have a "hoist" or “long line" rescue capability.

1. CHP unit should be requested in situations where this type of rescue is needed and the STARR air crew is unavailable.

2. ETA's to various areas will be dependent upon the location of the helicopter at the time of the request.

C. All other aircraft, including Sonoma County Sheriff and Coast Guard, must be requested using the request procedures for Auxiliary Medical Rescue Aircraft listed in this policy.

III. PROCEDURE

A. REQUEST OF LOCAL EMERGENCY MEDICAL/RESCUE HELICOPTER

1. Advise Dispatch that a Medical Helicopter is needed.

a. Dispatch will need the following information:

   • Location and number of patients/victims
- Type and extent of injuries (if known)
- General location of nearest landing site
  - Map guide page number and coordinates and/or significant landmarks identifiable from the air, i.e.: burning building, patrol car lights, etc.
- Weather conditions on scene
- Obstacles/hazards to the helicopter
- Name of incident commander or on-scene contact
- If a hoist is requested, estimate the distance the patient will need to be lifted from the ground to the helicopter

b. Dispatch will provide the responding helicopter unit of the dispatch frequency and name of requesting agency.

c. If additional information is needed, Sheriff's Dispatch will facilitate contact with the on-scene contact person.

B. AUXILIARY MEDICAL RESCUE AIRCRAFT

1. This procedure is provided to obtain special resource assistance in inland search and rescue operations in the event local rescue aircraft is unavailable.

2. This procedure complies with the OES Law Enforcement Mutual Aid Search and Rescue System, provides coordination in obtaining infrequently used resources, and provides consistency in request procedures.

3. Auxiliary Rescue Aircraft may be used when non-disaster inland search and rescue operations exceed local and state capabilities.
   a. A minimum of one hour response time should be expected.
   b. An ETA can be given only after the request is made and an assessment of available resources has been completed.

4. The Incident Commander determines the need for a specialized resource

5. The on-scene agency will contact Contra Costa Sheriff's Dispatch (law enforcement mutual aid coordinator).
   a. Information that is to be given to Sheriff's Dispatch for relay to State OES Law Division:
      - Longitude and latitude of incident or map coordinates
      - Incident description, including number of injured, types of injuries and topography
      - If hoist is requested, estimate the distance the patient will need to be lifted from the ground to the helicopter
      - Altitude of incident, if known
      - Weather at the scene
b. If additional information is needed, Sheriff's Dispatch will facilitate contact with the on-scene agencies dispatch center, for direct communications.

- Sheriff's Dispatch contacts State OES Law Division:
  - Monday - Friday, 0800 hrs - 1700 hrs: (916) 262-1744
  - Nights, weekends, holidays: (916) 262-1621
I. POLICY

A. The Canine Program has been established to provide assistance within policy anywhere within our Office or in support of surrounding public safety agencies.

B. The Canine Program mission is to provide assistance to all Sheriff’s Office Divisions whenever necessary and within Department policy, as well as enhancing the overall effectiveness of the Department, along with supporting other Law Enforcement Agencies as needed.

II. GENERAL INFORMATION

A. Canine Unit Organization

1. Assistant Patrol Division Commander
   a. Shall participate in the selection for handlers, canines, and volunteers in the Canine Unit.
   b. Shall participate in the “Canine Bite Review” process.
   c. Ensure all canine teams remain in compliance with P.O.S.T. canine standards.
   d. Manage canine fund.
   e. Review all canine records and files annually.

2. Canine Sergeant
   a. The Canine Sergeant will report to the Assistant Patrol Division Commander.
   b. The Canine Sergeant will be responsible for the following:
      • Shall participate in the selection for handlers, canines, and volunteers in the Canine Unit.
      • Shall participate in the “Canine Bite Review” process.
• Report/document any discrepancies in the canine team performance of either canine or canine handler to the Assistant Patrol Division Commander.
• Report all canine injuries, canine deaths and handler injuries to the Assistant Patrol Division Commander as soon as possible.
• Schedule training with and through the Department contracted trainer.
• Evaluate the training and training programs when required to maximize the capabilities of the Canine Unit.
• Maintain training programs and complete performance evaluations of canine teams.
• Act as a liaison officer with other area law enforcement agencies that maintain canine programs to enhance inter-agency communication and cooperation.
• Act as a liaison officer with the public by scheduling public canine demonstrations, shows and contests, while ensuring the integrity of the unit and Department.
• Maintain canine records.
• Recommend and oversee the procurement of needed equipment and services for the unit.
• Order supplies, investigate the use of potential new products and keep inventory of the same.
• Conduct canine equipment inspections on a regular basis to ensure the serviceability of all equipment used by Canine Unit members. Report the results to the Assistant Patrol Division Commander quarterly.
• Act as a liaison with all canine related vendors (veterinary, trainer, equipment, canine supplier).
• Maintain a current list of available countywide emergency veterinary clinics and hours of operation (24 hours preferred).

3. Canine Handler
   a. Selection Process consists of the following:
      • Application containing the following elements:
        • Letter of Interest
        • Letter of Recommendation from current lieutenant and supervisor
        • Three arrest reports
        • Resume
• Interview
  • Conducted by the Canine Sergeant and the Department contracted trainer.
  • A DSA member will be invited to observe the process.

• Physical Assessment (Investigations Division handler exempt)
  • To assure the candidates can physically meet the challenges that a police service dog handler faces, an assessment of the candidate’s physical endurance will be given and consist of the following:
    • 40-yard run carrying an 80 lbs. weight
    • Lift an 80 lbs. weight over a six-foot-high fence
    • Completion of a 1.5 mile run in less than 15 minutes

• Canine Handler assessment
  • The canine handler must role-play during training as a decoy or agitator, so the candidate must have an affinity for animals and cannot be intimidated by the canines. To evaluate this trait/ability, the candidate will attend a canine training session where the contracted Department trainer will direct, supervise and evaluate the candidate based on his/her interaction with the police service dogs as an agitator, decoy and handler during obedience scenarios.
    • A DSA member will be invited to attend and observe the process.
    • Review of work history, including attendance, performance evaluations, self-motivation and report writing.
    • A second interview will be conducted by the Assistant Patrol Division Commander and Canine Sergeant. Second interviews for Investigations Division handler positions are conducted by the Investigations Division Commander.

• Home evaluation
  • To attempt to assure the compatibility between the canine, the handler, his/her family, along with protecting the Sheriff’s Office property and as a risk management tool for the Department.
• The home evaluation will entail confirming the candidate rents or owns his/her residence. The dwelling has a fenced rear yard and the candidate’s family is aware and accepting of the demand of being a canine handler.

• The yard must be approved by the Assistant Patrol Division Commander and Canine Sergeant as being suitable to house a dog.

• Candidates must verify there are no HOA restrictions on the building of a kennel consistent with CCCSO standards.

• A standardized interview/inspection form will be used and available to the DSA.

b. Minimum Qualifications

• Candidates to be considered must have a minimum of two years’ experience in the Patrol or Special Operations Division.

c. Minimum Commitment

• A three-year commitment is required due to the substantial investment in the purchase of the police service dog, along with the associated costs (certification training, maintenance training and equipment).

• The handler will be exempt from forced rotation to the Detention Division consistent with the Memorandum of Understanding. The Sheriff reserves the right to employ Reverse Rotation for a Canine Deputy regardless of status.

d. Work Schedule

• The Canine Unit will either be assigned to the existing J-Team or as a separate unit assigned to the Patrol or Special Operations Division.

• A canine team assigned to the J-Team will work the J-Team schedule and hours.

• The Patrol Division Commander or respective Police Manager will make the final canine team schedule determination.

• The Investigations Division – Special Investigations Unit handler will work normal Investigations Division hours, or as designated by the SIU Sergeant.
Responsibilities

- The handler is required to rent or own a residence with a fenced rear yard.
- The handler shall ensure that the canine receives proper nutrition, grooming, training, medical care, affection and acceptable living conditions.
- When off-duty, the canine shall be maintained in the direct control of the handler or in a kennel. When the canine is kenneled at the handler’s home, the gate shall be secured with a lock. When off-duty, canine may be let out of their kennels while under the direct supervision of their handler.
- Under no circumstances will the canine be lodged at another location unless approved by the Canine Sergeant.
  - When the handler anticipates extended time off that requires boarding of the canine, the Canine Sergeant will be given reasonable notification to make appropriate arrangements.
- The Canine Sergeant shall be notified as soon as practical of any illness or injury to the police service dog.
- Through Department sponsored training, each police service dog team shall be trained and certified to meet current P.O.S.T. standards prior to assignment.
  - Each police service dog team shall be re-certified to P.O.S.T. Police Service Dog standards on an annual basis.
- The handler shall maintain all Department equipment under his/her control in a clean and serviceable condition. Any deficiency shall be reported to the Canine Sergeant.
- Handlers shall permit the Assistant Patrol Division Commander or Canine Sergeant to conduct spontaneous on-site inspections of affected areas of their residence and equipment to verify that conditions and equipment conform to this policy.
- Any changes in the living status of the handler, which may affect the lodging or environment of the police service dog, shall be reported to the Canine Sergeant as soon as possible.
- The canine should be permitted to socialize in the home with the handler’s family for short periods of time and under the direct supervision of the handler.
f. Uniform

- Canine handlers, while actively working a canine and assigned to county patrol, may wear a two-piece tan colored BDU type uniform with the nametag and badge sewn on. Canine handlers, while actively working a canine and assigned to a contract city, may wear a two-piece blue colored BDU type uniform with the nametag and badge sewn on. The back of the uniform shirt will have a patch reading “SHERIFF K9” or if working a contract city reading “POLICE K9.” The canine shoulder patch is to be worn on the left sleeve ½” under the Office of the Sheriff patch.

- Class “A” uniform is the same as other Patrol Division members. While in the Class “A” uniform, the K-9 pin will be worn above the nametag.

- The Investigations Division – Special Investigations Unit handler will wear the unit’s uniform of the day, unless the canine is being deployed for a search. During the searches, the SIU handler will wear a tactical vest with a patch reading “SHERIFF K9,” or a uniform as described above.

g. Separation from the Canine Unit

- In the event the Department determines the canine handler’s services are no longer needed, the canine will be evaluated for continued service. This evaluation will be conducted by the Department contracted trainer, Canine Sergeant and Assistant Division Patrol Commander. If after the evaluation, it is determined the canine has substantial service life remaining, it may be reassigned to another handler. The following factors will be considered during the evaluation:
  
  - Age of the canine
  - Years of service
  - Demeanor
  - Medical issues

- Reasons for handler separation include, but are not limited to:
  
  - Department contracted canine trainer or Patrol Division or Special Operations Division Commander determines handler is unfit for canine duty.
  - Handler abuses or neglects canine.
  - Handler misuses canine.
• Failure to meet the P.O.S.T. certification after sufficient number of attempts.
• Health or age prevents canine from performing tasks.
• Handler transfers out of unit.
• The Office of the Sheriff understands that a strong emotional bond develops between a handler and the canine. In the event the canine retires in good standing; the handler may purchase the dog from the Office of the Sheriff at an agreed upon fee. Ownership of the canine will be transferred over to the handler. The handler will then be responsible for any subsequent medical, feeding, housing, and licensing costs, and assume any liability resulting from actions of the canine.
• In the event the handler does not take over ownership of the canine, the Office of the Sheriff will determine where the canine is placed.

h. Compensation
• The police service dog handler shall be compensated for time spent in the care, feeding, grooming and other needs of the dog as provided in the Fair Labor Standards Act. The compensation shall be prescribed in the employee’s MOU.

4. Canines
a. The police service dog will be selected, purchased, and trained as determined by the Office of the Sheriff.

B. Dogs in Public Areas
1. All police service dogs shall be kept under the handler’s control when in areas that allow access to the public.
   a. Exceptions would include specific police operations for which the police service dogs are trained.
2. Police service dogs shall not be left unattended in any area to which the public may have access. When the police service dog vehicle is left unattended all windows and doors shall be secured.

C. Medical Care of the Police Service Dog
1. In the event the police service dog is injured, the injury will be immediately reported to the Canine Sergeant, Assistant Patrol Division Commander, or O.D.
2. Depending on the severity of the injury, the police service dog shall either be treated by the designated veterinarian or transported to a designated emergency medical facility for treatment.
   a. If the handler and dog are out of the area, the handler may use the nearest available veterinarian.
3. Non-emergency medical attention shall be coordinated through the Canine Sergeant.

4. Except in emergencies outlined above, all medical attention shall be rendered by the designated Department contracted veterinarian.

5. All records of medical treatment shall be maintained in the police service dog handler’s canine training file.

D. Training

1. Before assignment in the field, each police service team shall be trained and certified to meet current P.O.S.T. standards.

2. Each police service dog team shall thereafter be re-certified to P.O.S.T. Police Service Dog standards on an annual basis, when needed to correct observed deficiencies, or at the discretion of the Assistant Patrol Division Commander or the Canine Sergeant.

3. Police service dog teams shall receive training as defined in the current contract with the Department’s Police Service Dog training provider.

4. Police service dog handlers are encouraged to engage in additional training with the approval of the Canine Sergeant.

5. To ensure that all training is consistent, no handler, trainer or outside vendor is authorized to train Department canines.

6. All police service dog training shall be conducted while on-duty or otherwise specified in the employee’s current MOU. The bi-monthly training is MANDATORY and any absences need to have prior approval from the Canine Sergeant or Assistant Patrol Division Commander.

7. No police service dog team failing P.O.S.T Police Service Dog certification shall be deployed in the field until certification is achieved. When practical, pending successful certification, the police service dog handler shall be reassigned to regular patrol duties.

8. Police service dog records shall be maintained in the canine handler’s file for a period of two years. The exceptions shall be if the records in question pertain to ongoing litigation or at the discretion of the Assistant Patrol Division Commander.

E. Procedures for Maintenance and Control of Narcotics for K-9 Training

1. OBTAINING NARCOTICS

   a. Narcotics must be obtained from the CCCSO Property Room in Concord. The narcotics must have been legally seized and the case adjudicated. The narcotics must be ordered in the name of the K-9 supervisor. Two sworn Deputy Sheriffs must sign for and pick-up the narcotics, in compliance with our current evidence policy.

2. INVENTORY PROCEDURES

   a. Upon receiving the narcotics, the K-9 supervisor and a narcotic K-9 handler, together must immediately conduct an initial inventory. Each narcotic shall be weighed, and the following
information recorded in the K-9 Narcotics Inventory Book. Each initial entry is to be signed by the K-9 supervisor and the K-9 handler. The case number and lab results for the narcotics will also be maintained by the supervisor for review.

b. Source of narcotic, the case or lab number and by whom it was obtained.

- Date and time received
- Type of narcotic (marijuana, methamphetamine, heroin, etc)
- Form of narcotic (green leaf, pill, liquid, paste)
- Weight of the narcotic
- Any discrepancies noted during inventory will be immediately reported to the Assistant Patrol Division Commander, who will determine appropriate action to be taken.
- The designated narcotic K-9 handler, in the presence of the K-9 supervisor may separate the narcotics and repackage them suitably for narcotics training.
- Each re-packaged narcotic will be recorded in the K-9 Narcotics Inventory Book to reflect the following:
  - Identification number assigned or other marking
  - Date of packaging
  - Type of narcotic (marijuana, cocaine, heroin, methamphetamine)
  - Form of narcotic (powder, rock, tar)
  - Weight of narcotic
  - Weight of narcotic, including packaging/container
  - This entry is to be witnessed and signed by the K-9 supervisor and the designated narcotic K-9 handler.

- An inventory is to be conducted and recorded in the Narcotics Inventory Book by the K9 supervisor and a designated narcotic K-9 handler every January and June. An inventory can be done at any time, as requested by Management Staff, the K-9 supervisor, or a narcotic K-9 handler.
- All inventories are to be memorialized in writing by the K-9 supervisor and given to the Assistant Patrol Division Commander for review.
3. DESTROYING NARCOTICS
   a. All narcotics should be routinely rotated every six months to one year to preserve the scent suitable for narcotics K-9 training. K-9 training narcotics must be destroyed by the following method:
      • The K-9 supervisor will transport the narcotics to the Property Room for destruction, pursuant to Department Policy 1.06.37.

4. LOST OR STOLEN NARCOTICS
   a. The K-9 supervisor is to be notified immediately in writing via memo, if any K-9 narcotics are lost or stolen.
   b. The K-9 supervisor or the narcotic K-9 handler having possession of the narcotics at the time of the loss or theft will make a report.
   c. The memo and report will be forwarded, via the chain of command, to the Patrol Division Commander.

5. DISSEMINATED NARCOTICS
   a. In the event the narcotics are accidentally disseminated by the K-9 or the handler, the following procedure is to be followed by the K-9 handler.
      • The narcotic handler will first attempt to contact the K-9 supervisor and have them respond to the location of the incident. If the K-9 supervisor is unavailable, the K-9 handler will contact a Patrol Division Supervisor and have them respond to the scene. The supervisor will interview the K-9 handler regarding what occurred, and the K-9 handler will write a report outlining the incident. An original case number will be issued and the report forwarded to the K-9 supervisor before the end of shift. The K-9 handler will also make a notation of the incident in the Narcotics Inventory Book with the corresponding case number. The K-9 handler will contact Dispatch to call-out Advance Crime Scene Restoration for a biohazard clean-up if necessary. The substance that can be retained will be packaged and weighed. The K-9 handler or supervisor will return the remaining substances to the Property Room for destruction.
      • In the event the retained narcotics remain suitable for K-9 narcotics training, the K-9 supervisor along with a narcotic K-9 handler will repack the narcotics, utilizing the same procedures as set forth in the previously addressed procedural item under “INVENTORY PROCEDURES.” A log entry shall be made, noting the new weight of the narcotics.
• A K-9 handler will write a memorandum for the K-9 supervisor’s review and a copy will be retained in the K-9 narcotics inventory book. A copy of the memorandum will be forwarded, via the chain of command, to the Patrol Division Commander.

6. STORAGE OF NARCOTICS
   a. Narcotics will be stored in an airtight container then placed in the locked K-9 safe.
   b. When narcotics are logged out or logged in by the supervisor or a narcotic K-9 handler, they are to be logged in the K-9 Narcotics Log Book under the following procedure:
      • Date taken
      • Time taken
      • Identification number or marking
      • Weight of narcotic and packaging (including container)
      • Signed initials and officer’s identification number

7. TRANSPORTATION OF NARCOTICS
   a. Narcotics taken from the K-9 safe are to be placed in an airtight container (each type of narcotic stored separately) and placed in a locked, portable, metal box for transportation. The narcotics are to remain locked in these boxes, unless they are being used in training exercises.
   b. The K-9 supervisor and the narcotic K-9 handlers will retain keys or combinations to the transportation boxes.
   c. Training narcotics shall be returned to the locked K-9 safe and logged in upon completion of the training exercise.

F. Equipment and Supplies
   1. Canine handling equipment will be furnished by the Department, but will be the handler’s responsibility to monitor and inspect the serviceability of all assigned equipment. Equipment in need of repair or replacement should be immediately reported to the Canine Sergeant.
   2. Canine Patrol vehicles will be assigned to handlers. It is the handler’s responsibility to assure that the vehicle is in good repair and is cleaned/vacuumed as needed.
   3. The Department will provide each new canine handler with a 10’x10’ kennel and concrete pad.
   4. The Department has contracted with private vendors for veterinary, equipment and food services. All purchases must have the approval of the Canine Sergeant prior to the transaction.
   5. Purchases outside the contracted vendors are not authorized unless exigent circumstances exist and must have prior approval from the Canine Sergeant.
III. PROCEDURES

A. Police Service Dog Use

1. Requests
   a. Department personnel are encouraged to freely solicit the use of the police service dogs.
   b. When bureaus outside of the Patrol Division request to use a police service dog team, the request shall be made to the Canine Sergeant, Assistant Patrol Division Commander or the on-duty O.D.

2. Requests by Outside Agencies
   a. The Assistant Patrol Division Commander, Canine Sergeant, or O.D. must approve all requests for police service dog assistance from outside agencies subject to the following provisions:
      • Police service dog teams shall not be used outside the Department’s jurisdiction to perform any assignment, which is not consistent with this policy.
      • Upon arrival at the scene, the handler has the ultimate decision as to whether the police service dog is to be used for the specific assignment.
      • Police service dog teams shall not be called out while off-duty or used outside the Office of the Sheriff’s jurisdiction unless authorized by the Assistant Patrol Division Commander, Canine Sergeant, or O.D.

3. Considerations for Use of Dual Purpose Canines
   a. Prior to the use of a police service dog to search for or apprehend any individual, the police service dog handler and/or the supervisor on scene shall carefully consider all pertinent information reasonably available at the time. The information shall include, but is not limited to the following:
      • The individual’s age or estimate thereof.
      • The nature of the suspected offense.
      • Any potential danger to the public and/or other officers at the scene if the police service dog is released.
      • The degree of resistance, if any, the suspect has shown.
      • The potential for escape or flight if the police service dog is not utilized.
      • The potential for injury to officers or the public caused by the suspect if the police service dog is not utilized.
   b. The police service dog handler shall have the ultimate authority not to deploy the dog. The handler will evaluate each situation and determine if the use of the police service dog is technically feasible. Generally, the decision to deploy the dog shall remain
with the handler; however, a supervisor sufficiently apprised of the situation may decide to not deploy the dog.

4. Narcotic-Detection Service Dog Use
   a. A narcotic detection trained police service dog may be used in accordance with current law to:
      • Assist in the search for narcotics during a search warrant service.
      • Support probable cause for a search warrant.
      • Search vehicles, buildings, bags and any articles deemed necessary.
   b. A narcotic detection police service dog will not be used to search a person for narcotics.

5. Warning Announcing Use
   a. Unless it would otherwise increase the risk of injury or escape, a clearly audible warning to announce that a police service dog will be released if the person does not come forth, shall be made prior to releasing the police service dog. The police service dog handler, when practical, shall first advise the supervisor of their decision if a verbal warning is not given prior to releasing the police service dog.

6. Guidelines for Use of Dual Purpose Canines
   a. A police service dog may be used to locate and apprehend a suspect if the police service dog handler reasonably believes that the individual has either committed or is about to commit any offense and if the following conditions exist:
      • There is a reasonable belief that the individual poses an immediate threat of violence or serious harm to the public, any officer, or the handler.
      • The individual is physically resisting arrest and the use of the police service dog reasonably appears to be necessary to overcome such resistance.
      • The individual(s) is/are believed to be concealed in an area where entry by other than the police service dog would pose a threat to the safety of officers or the public.
      • It is recognized that situations may arise which do not fall within the provisions set forth in this policy. In any such case, a standard of objective reasonableness shall be used to review the decision to use a police service dog in view of the totality of the circumstances.
   b. Absent the presence of one or more of the above conditions, mere flight from pursuing officer(s) shall not serve as good cause for the use of a police service dog to apprehend and individual.
7. Reporting
   a. Any use of the police canine team that results in damaged property will be reported in a Police Service Dog Use Report and submitted to the Assistant Patrol Division Commander as soon as reasonable.
   b. Use of Police Service Dog with Force
      • Any use of physical force by the police canine team will be documented completely and accurately in a Police Service Dog Use report and crime report.
      • If a bite or injury results from the use of a police service dog, that information shall be documented on a Police Service Dog Use Report. The report should include, at a minimum, the following:
      • In all cases of bites or injuries resulting from the use of a Police Service Dog, photographs shall be taken of the bite or injury after first tending to the immediate needs of the injured party. Photographs shall be downloaded into the report writing system and attached to the report.
      • If the injury requires medical attention, the subject should be transported to an appropriate medical facility. In the event an in-custody suspect requires medical attention, an officer should standby with the suspect until treatment has been rendered.
      • If the subject alleges an injury that is not visible, notification shall be made to a supervisor and the location of the alleged injury shall be photographed.

8. Bite Review
   a. In an attempt to monitor the appropriateness in the use of the canine, as well as identifying training issues, a “Bite Review Board” will review all police service dog engagements.
   b. The board will consist of the Canine Sergeant, Assistant Patrol Division Commander and Department contracted trainer. The finding or recommendation will then be forwarded to the Patrol Division Commander for review.
   c. The board will review the Police Service Dog Use Report. The board will sign off on the report indicating they have reviewed the report, its contents and the actions of the canine team.
   d. By establishing this review, the bite ratio compared to apprehensions can be monitored, thus in effect reducing officer and Department liability.
   e. Whenever a dog engages a subject and a bite review form and police report are initiated, a copy of those shall be forwarded to Risk Management, 2530 Arnold Dr. Suite 140, Martinez.
I. POLICY
   A. The armored vehicle (BEARCAT) is equipped to function as a ballistic shielded vehicle for the rescue and transport of citizens and law enforcement personnel during a critical incident where increased ballistic protection would assist in their movement. The armored vehicle is under the control of the Patrol Division – SWAT.
   
   B. This policy is designed to provide a level of auditing and accountability to ensure the appropriate use of the armored vehicle through proper supervision.

II. GENERAL
   A. DEFINITION. “BEARCAT” Ballistic Engineered Armored Response Counter Attack Truck.
   
   B. DESCRIPTION. The BEARCAT is an armored personnel vehicle built on a Ford F-550 chassis that is designed to provide increased ballistic protection for those inside the vehicle. The vehicle is rated to stop up to .50 caliber ammunition, drive on and off road, capable of deploying chemical agents, and breaching. The vehicle has CBRNE capabilities (Chemical, Biological, Radiological, Nuclear, and Explosives) and is equipped with a radiological / chemical detector. The vehicle seats 10-12 people inside and is equipped with outer skids for rapid personnel deployment.
   
   C. OPERATIONS. The SWAT Commander, Assistant SWAT Commander, or designee, will be responsible for the overall control and coordination of the armored vehicle. The Technical Services Division Fleet Maintenance Coordinator will be responsible for establishing maintenance schedules and ensuring all repairs are current. Only trained members of the SWAT Tactical and Hostage Negotiations Team will be authorized to drive and operate the armored vehicle. Under exigent circumstances, deputies with prior training and experience with the armored vehicle may be authorized as drivers.
III. PROCEDURES

A. EMERGENCIES AND URGENT EVENTS
   1. The armored vehicle may be activated as needed with the approval of the SWAT Commander, Assistant SWAT Commander, or designee. In the event of a SWAT team call-out, the armored vehicle will also be deployed. The Patrol Division Commander will be notified of the deployment of the armored vehicle as soon as practical.

B. INTERNAL REQUESTS FOR BEARCAT
   1. Requests will be made to the Patrol Division Commander via the SWAT Commander or Assistant SWAT Commander.

C. OUTSIDE AGENCY REQUESTS FOR BEARCAT
   1. Requests will be reviewed by the SWAT Commander, Assistant Commander, or designee and a recommendation will be made to the Patrol Division Commander on whether to approve the request for the armored vehicle.
      a. If the use of the vehicle is approved by the Patrol Division Commander, two SWAT Tactical operators will accompany the armored vehicle to the incident location.
      b. The armored vehicle will be used in a manner which is consistent with Sheriff’s Office Policy.
      c. The utilization of the armored vehicle during an outside request response will be at the discretion of CCCSO SWAT tactical operators.

D. SWAT OPERATION USE
   1. The armored vehicle will be driven in a safe manner. Drivers will adhere to the Office of the Sheriff’s Vehicle Operation and Parking (1.06.51) and Code Three Vehicle Operations (1.06.53) General Policy and Procedure.
   2. Sound judgement will be used when utilizing the armored vehicle for pulling, pushing, breaching, blocking, or overcoming any obstruction that will delay or compromise the tactical operation. SWAT Command and/or the driver of the armored vehicle will have final say on the utilization and positioning of the vehicle.
   3. Use of the armored vehicle in a vehicle pursuit is strictly prohibited.

E. TRAINING USE
   1. The armored vehicle is authorized for all training events for the Sheriff’s Office SWAT Team.
   2. All requests by outside agencies to use the armored vehicle for training will be reviewed by the SWAT Commander and/or Assistant SWAT
Commander. The Patrol Division Commander will have final approval for the training use of the armored vehicle by outside agencies.

a. If the use of the vehicle is approved by the Patrol Division Commander, a minimum of one tactical operator will accompany the armored vehicle to the training location.

F. OTHER USES
1. Internal or outside requests for the use of the armored vehicle as a static display, public demonstrations, and/or safety events must be reviewed and approved by the Patrol Division Commander.

G. EFFECTIVENESS EVALUATION
1. Use of the armored vehicle will be documented in a report and the effectiveness will be noted.

IV. TRAINING REQUIREMENTS.
A. Operators are required initial and yearly training to demonstrate familiarity with the operation and controls of the armored vehicle.
   1. Only those operators with initial and current annual training are authorized to operate the armored vehicle.

V. MAINTENANCE
A. An operator will conduct a safety inspection of the vehicle prior to all deployments and training. Any discrepancies in the inspection will be immediately corrected, or will be forwarded for repair via the Technical Services Division Fleet Maintenance Coordinator. Generally, the operator will check the condition function of the engine, steering, and braking systems. The safety inspection will also include a visual inspection of the following areas:
   1. Lights: headlights, tail lights, stop lights, spot lights, and emergency lights.
   2. Tire tread and inflation (run flats)
   3. Hatch handles
   4. Windshield wipers
   5. Gun ports and turret
   6. Public Announcement (PA) speakers
